PREFACE

The 1961 edition of the Canada Year Book continues a series of annual publications giving official statistical and other information on almost every measurable phase of Canada's development. As the economy of the country has expanded, the Dominion Bureau of Statistics has endeavoured to present the story of this development, summarizing a great mass of detailed statistical information concisely within the covers of one volume and supplementing it with data from other Departments of the Federal Government and from the provinces.

Special feature articles are presented in each edition of the Year Book. Those in the current issue include: "The Drainage Basins of Canada" (pp. 16-18); "Amendment of the Canadian Constitution" (pp. 51-57); "Federal Food and Drug Legislation in Canada" (pp. 242-248); "The National Agricultural Program" (pp. 399-402); "Canadian Metallurgical Development" (pp. 513-522); "The Fur Industry" (pp. 618-622); "The Construction Industry in Canada" (pp. 684-689); "Taxation in Canada" (pp. 1038-1050); and "Commercial Banking in Canada" (pp. 1115-1120). Included also is a newly prepared treatise on Geology of Canada; this subject, because of its unchanging character, is not covered in detail in each edition.

All chapters include the latest data available at the time of printing. The most extensive revisions occur in the information on machinery of government, public health and welfare, scientific, medical and industrial research, the primary industries, manufacturing, capital expenditures, transportation, foreign trade and national income. The concluding chapter, entitled "Sources of Official Information and Miscellaneous Data", presents reference material listing government information services, special material published in earlier Year Books, federal legislation of the 1960-61 session of Parliament, a Canadian chronology of events, a register of official appointments, and a statistical summary of the progress of Canada since 1871.

Enclosed in the pocket on the inside back cover of the volume is a detailed political map.

The present volume was produced in the Canada Year Book Section of the Information Services Division by Miss M. Pink, Associate Editor of the Year Book and Chief of the Section, and the Year Book staff under the editorship and direction of Dr. C. C. Lingard, Director of the Division. The charts and maps were prepared for publication by Miss P. Beland of the Canada Year Book Section, L. Tessier of the Drafting Unit, and the Surveys and Mapping Branch of the Department of Mines and Technical Surveys.

The co-operation of numerous officials of the various Departments of the Federal and Provincial Governments and of this Bureau in the preparation of material for the Year Book is gratefully acknowledged. Credit by means of footnotes is given where possible either to the persons or to the branches of the public service concerned.

Walter E. Duffett.

WEIGHTS AND MEASURES AND OTHER INTERPRETATIVE DATA

In Canada as a rule the Imperial system of weights and measures is followed. An exception, however, is the ton where, unless otherwise stated, the short ton of 2,000 lb. is meant. Billion where used represents 1,000 million.

The following table shows the weights and measures used in Canada in connection with the principal field crops and for wheat flour and fruits:—

Grains—	*Pounds per Bushel*
Wheat	60
Oats	34
Barley	48
Rye	56
Buckwheat	48
Flaxseed	56
Corn	56
Mixed grains	50
All others	60

Fruits (standard conversions)—	*Pounds*
Apples, per barrel	135
Apples, per box	43
Pears, per bushel	50
Plums " "	50
Cherries " "	50
Peaches " "	50
Grapes " "	50
Pears, per box	42
Strawberries, per quart	1.25
Raspberries " "	1.25
Loganberries " "	1.25

Wheat Flour—

2.3 bu. of wheat is required to produce 100 lb. of flour.

Relative Weights and Measures, Imperial and United States

The following list of coefficients may be used to translate amounts expressed in one unit to the other. It must be borne in mind that where the list below refers to Imperial pint, quart and gallon, their equivalent in ounces is also in Imperial measure; likewise United States designations for these quantities are shown in the U.S. equivalent in ounces. The Imperial (or British) fluid ounce and the U.S. fluid ounce are different measures. One Imperial fluid ounce equals 0.96 United States fluid ounce and one Imperial gallon equals 1.2 United States gallon.

1 Imperial pint=20 fluid ounces.
1 United States pint=16 fluid ounces.
1 Imperial quart=40 fluid ounces.
1 United States quart=32 fluid ounces.
1 Imperial gallon=160 fluid ounces.
1 United States gallon=128 fluid ounces.
1 Imperial proof gallon=1.36 United States proof gallon.
1 short ton=2,000 pounds.
1 long ton=2,240 pounds.
1 barrel crude petroleum=35 Imperial gallons.
1 ounce avoirdupois=0.91146 ounce troy (oz.t.)

Fiscal Years of Federal and Provincial Governments

The fiscal year of the Federal Government and of each of the ten Provincial Governments ends on March 31. Throughout the Year Book, fiscal year figures are indicated in the text and headings of tables; otherwise, figures are for calendar years.

SYMBOLS

The interpretation of the symbols used in the tables throughout this publica is as follows:—

. . figures not available.

... figures not appropriate or not applicable.

— nil or zero.

- - amount too small to be expressed or where "a trace" is meant.

^{p} preliminary figures.

^{r} revised figures.

PART I.—GEOLOGY OF CANADA*

North America comprises six main natural regions, which are both physiographic and geological because the ages, kinds and structures of the underlying rocks determine the natures of the land surfaces. Knowledge of these regions is important because their geological characteristics have much influence on the suitability of different areas for such activities as agriculture, mining, petroleum production and sports, as well as on the varied scenery of the country. The six regions are: the Canadian Shield, a vast area of ancient rocks that is mainly in Canada; the Interior Plains and Lowlands, the largest area of which extends throughout the mid-Continent from the Gulf of Mexico to the Arctic Ocean; the Appalachian Region, mainly in the United States but also forming an important part of Eastern Canada; the Cordilleran Region, extending along the entire west coast of the Continent; the Atlantic Coastal Plain along the eastern seaboard of the United States; and the Innuitian Region, a mountainous belt in the Arctic Archipelago. Canada includes parts of four of these regions, all of the Innuitian Region, but none of the Atlantic Coastal Plain.

The Canadian Shield, embracing about one-half of the total area of Canada, is a roughly horseshoe or shield shaped terrain of some 1,850,000 sq. miles, having Hudson Bay at its approximate centre. The Shield continues into the United States west and south of Lake Superior, and east of Kingston where a belt of resistant rocks called the Frontenac Axis forms the Thousand Islands and, to the south, broadens to form the Adirondack area.

---

* Prepared by Dr. A. H. Lang and published by permission of the Director, Geological Survey of Canada, Ottawa.

Far back in geological time the Shield contained many ranges of high mountains but these have mainly been worn down to a surface of moderate relief consisting of hills, ridges and valleys containing innumerable lakes and streams. Most of the surface is from 600 to 1,200 feet above sea-level, but higher uplands form such well-known features as the Laurentian Mountains north of Montreal where Mount Tremblant rises to an elevation of 3,150 feet, and the Haliburton Highlands in southeastern Ontario which are up to about 1,800 feet. Along the coast of Labrador and in Baffin Island are mountains rising 5,500 and 8,500 feet, respectively, above the sea.

Flanking the Shield are large expanses of plains and lowlands underlain by relatively young and soft rocks overlain in many places by good agricultural soils. A notable characteristic of the boundary between the Shield and the lowlands is the presence of large lakes that lie partly in rock basins in the Shield and partly in depressions in the younger strata. The most prominent are Great Bear Lake, Great Slave Lake, Lake Athabasca, Lake Winnipeg and Lake Huron. The largest lowland area is that of the Interior Plains, sometimes called the Great Plains or Western Interior Lowlands. These constitute the prairies of Western Canada and their wooded continuation to the north. They are divided into the first prairie level, also called the Central Lowlands or Manitoba Plain, from 600 to 900 feet in elevation; the second prairie level, in western Manitoba and eastern Saskatchewan, averaging 2,000 feet in elevation; the High Plains of Alberta and western Saskatchewan, up to 4,300 feet; and, to the north, the Mackenzie Lowlands, from 500 to 4,000 feet. The Northern Interior Lowlands include the Hudson Bay Lowlands south of Hudson Bay, the Foxe Basin Lowlands in and near western Baffin Island, and the Southern Archipelago Lowlands which occupy large parts of the more southerly Arctic islands. The Arctic Coastal Plain farther to the north is sometimes classed as a separate physiographic region comparable to the Atlantic Coastal Plain but is here grouped with the other plains and lowlands for simplicity. The Great Lakes–St. Lawrence Lowlands form two important agricultural and industrial areas in southern Ontario, separated by the Frontenac Axis; the more easterly continues in Quebec, on both sides of the St. Lawrence River, and an isolated continuation forms Anticosti Island.

The Canadian Cordilleran Region is a northwesterly-trending belt about 500 miles wide composed of high mountains and lower plateaux and valleys. It comprises southwestern Alberta, all of British Columbia except its northeastern corner, almost all of Yukon Territory, and the southwestern part of the Northwest Territories. The individual mountain groups and plateaux are arranged in a complex pattern divisible into three parallel northeasterly-trending zones; in most places these zones are quite distinct and are called the Western, Interior and Eastern Systems. Because the Western and Interior Systems are distinct geologically from the Eastern System they are grouped as the Western Cordillera in some geological literature, and in that case the Eastern System is called the Eastern Cordillera. The greater part of the Western System is composed of the high, rugged Coast Mountains along the mainland coast of British Columbia, which are up to 13,260 feet in elevation. Along part of the Yukon–Alaska boundary they are flanked to the southwest by the still higher St. Elias Mountains, up to 19,850 feet above the sea. In southern British Columbia a fairly small area is formed by the Cascade Mountains. Separated from the mainland by the Insular Passage are ranges forming Vancouver and Queen Charlotte Islands, with peaks up to 6,968 feet in elevation. The Interior System is a complex group of plateaux and mountains, respectively up to 6,000 and 11,000 feet above sea-level. Its principal plateaux are the Yukon in central Yukon Territory, the Nechako in central British Columbia, and the Fraser farther south. Some authorities separate the southern part of Fraser Plateau as the Kamloops Plateau, which extends to the 49th Parallel near the Okanagan River. The principal mountain divisions of the Interior System are the Ogilvie and Selwyn Mountains in the Yukon, the Cassiar, Omineca, Skeena, and Hazelton Mountains in northern British Columbia, and the Cariboo, Monashee, Selkirk, and Purcell Mountains in the south-central part of the province, east of Fraser and Kamloops Plateaux.

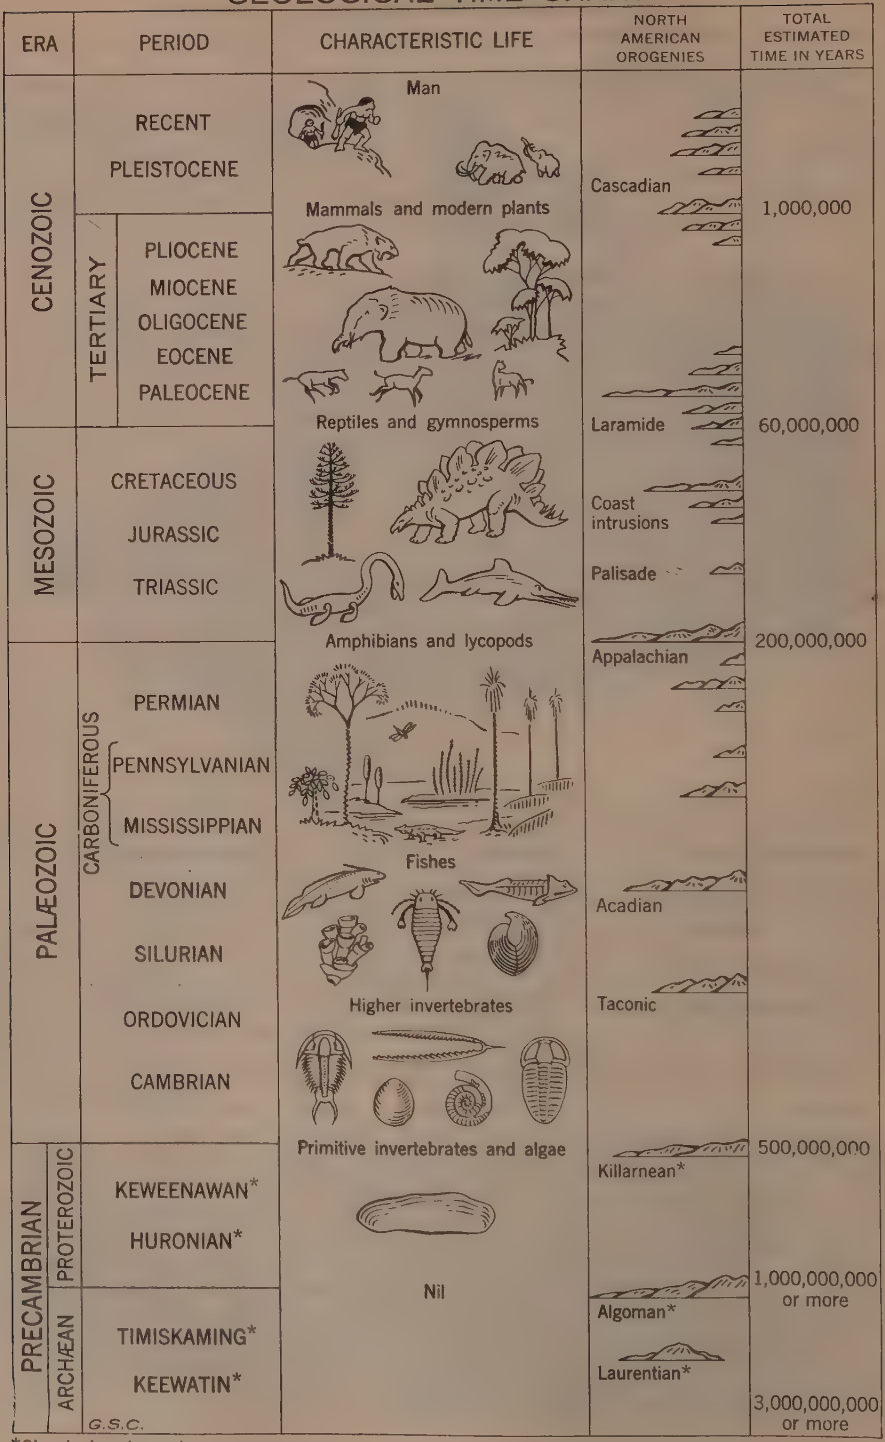
Geographical Branch, Department of Mines and Technical Surveys, 1960

The highest peak, 11,590 feet in elevation, is in the Selkirks. The Eastern System is divided into the Northern Ranges and the Rocky Mountains, separated by a plain and plateau along the Liard River near the British Columbia–Yukon boundary. The main features of the Northern Ranges are the British and Richardson Mountains near the Arctic Coast, and the Mackenzie and Franklin Mountains in the western part of the Northwest Territories. The Mackenzies occupy the largest area and are up to about 9,000 feet in elevation. The Canadian Rockies are composed of high, serrated ranges extending northward from the 49th Parallel; the elevation of the highest peak, Mount Robson, is 12,972 feet. Flanking them on the east are the Rocky Mountain Foothills which form a transition with the Plains. The Rocky Mountains, although extensive, are but a relatively small part of the mountains of Western Canada; therefore the popular tendency to apply the name to the entire Canadian Cordillera is inadmissible.

GEOLOGICAL TIME CHART



ERA		PERIOD	CHARACTERISTIC LIFE	NORTH AMERICAN OROGENIES	TOTAL ESTIMATED TIME IN YEARS
CENOZOIC		RECENT	Man

G.S.C.

*Classical region only

The Canadian Appalachian Region is the northern continuation of a long belt of fairly low mountains and ridges in the eastern United States. In Canada they extend in a general northeasterly direction through the eastern part of the Eastern Townships of Quebec, the Gaspe region, and all of New Brunswick, Nova Scotia and the Island of Newfoundland excepting several lowland areas which, like Prince Edward Island, are classed as part of the Appalachian Region. The Appalachian Mountains have been in existence much longer than those of the Cordilleran Region and have been worn down to moderate proportions. Their highest point in Canada is Mount Jacques Cartier (4,160 feet) in the Shickshock Range of Gaspe. The highest elevations in New Brunswick, Nova Scotia and the Island of Newfoundland are 2,690, 1,392 and 3,500 feet, respectively.

The Innuitian Region, formerly called the Northern Arctic folded belt, is an area of fairly high mountains up to 300 miles wide stretching for about 800 miles across Ellesmere Island, the Parry Islands and other neighbouring islands. The ranges are from 3,000 to 10,000 feet in elevation.

Geological Processes.—The earth's crust is composed of minerals, the solid form in which the elements and their inorganic compounds exist naturally. Minerals occur in the crust in two main ways—as rock-forming minerals and as mineral deposits. Rocks are fairly large and homogeneous bodies composed of mineral grains. These may be of only one mineral, as in pure sandstone or limestone, but more commonly they comprise grains of two or more minerals, thus accounting for the variegated appearance of granite and many other rocks. Mineral deposits are concentrations of one or more minerals occurring within rocks as veins, irregular masses, or in other ways. Such mineral deposits are common but the minerals may not be valuable; they may be valuable but not in sufficient quantity to be mined economically; or, as in relatively few instances, they may be of economic sizes and contents.

Geological phenomena cannot be understood without an appreciation of the vastness of geological time. Pioneer geologists concluded that the earth existed for many millions of years, basing this on such evidence as the amount of sediments deposited annually in bodies of water (for example, it was estimated that several thousand years would be required to deposit one foot of typical limestone) and equating these estimates with the great thicknesses of sedimentary rocks measurable in various places. This was corroborated by observations that particular fossils are characteristic of particular groups of sedimentary rocks and that the plants and animals of which they are the remains must have evolved very slowly. Recently, more satisfactory methods of dating have been developed, based on the radioactive decay of certain elements such as uranium, which disintegrate into 'daughter' elements at constant rates. Such determinations are only beginning to become available in satisfactory quantities because they require much searching for suitable material, careful sampling and involved laboratory analyses. Most of the results date phenomena that affected rocks after they were formed, rather than the time of origin of the rock sampled. The oldest samples tested have yielded ages of 3,000 to 4,000 million years. Long before such methods were available, geologists agreed to divide geological time into eras and periods, most of which were terminated by unusually strong disturbances in the earth's crust. The eras and periods are listed on the accompanying chart, together with the most recent estimates of the dates of termination of the eras. The 'Precambrian' lasted more than five-sixths of entire geological time, but because of virtual absence of fossils in Precambrian rocks it was not possible to divide Precambrian time with the same assurance as later time, although, as explained above, progress is now being made. Therefore only two Precambrian eras, called the Early Precambrian or Archæan and the Late Precambrian or Proterozoic, are usually recognized; these have not been divided into periods that can be applied from one large area to another, whereas the younger eras and periods have world-wide recognition.

Because of atmospheric conditions the rocks at the earth's surface have from early time been subjected to weathering and erosion of the same kinds as can be seen at work today in the disintegration of rock surfaces, in the cutting action of streams, waves and winds carrying sand particles, in the spalling of rocks by frost action, in the gouging action of glaciers, in the levelling effects of landslides, and in the slow solution of soluble rocks like limestone. Continued over millions of years, these agencies reduced even great mountain chains to flat or rolling surfaces. The debris was carried away and deposited in basins by streams, waves and winds as mud, silt, sand or gravel. In some places, such as a continental shelf, the thickness of sediments was relatively small, and in others huge thicknesses accumulated in large trough-like depressions called geosynclines (part of the Caribbean Sea near the Lesser Antilles is a modern example). Also, compounds dissolved in water were deposited chemically in the bottoms of seas and lakes. In time, sediments become solid sedimentary rocks by the compaction caused by overlying sediments and by the cementing of grains by material deposited from solutions. Thus mud, sand and gravel, respectively, become shale, sandstone and conglomerate; and chemical precipitates become limestone, dolomite or beds like salt or gypsum.

In addition to sedimentary varieties there are two other fundamental classes of rocks—igneous and metamorphic. Igneous rocks are commonly formed by the crystallization of molten material, of which lava is a surface manifestation. If crystallization takes place beneath the surface it is slow, resulting in coarsely crystalline rocks such as granite, which may be exposed at the surface long afterwards as a result of erosion. If, on the other hand, the molten material reaches the surface from a volcano it crystallizes quickly to form fine-grained stratified volcanic rocks such as rhyolite and basalt; often associated with lavas are clouds of volcanic ash which settle to form sedimentary rocks called tuffs. Metamorphic rocks are formed from sedimentary or igneous rocks by the action of heat or pressure, or both, which in some cases merely causes a different crystallization of the pre-existing minerals and in others produces new minerals by re-arrangement of the elements already present to form new minerals that are more stable under the changed conditions; the latter are commonly platy minerals like mica. Thus shale may become slate, sandstone may become quartzite, and limestone may become marble. Also common results of metamorphism are foliated or banded rocks like schist and gneiss, which may be formed from various rocks and in which the foliation is commonly caused by the parallel orientation of platy minerals; in some gneisses banding is caused partly by thin parallel injections of granitic material. Metamorphic rocks are commonly formed in the 'core' of a mountainous belt, where heat and pressures are increased. Granites and other coarse-grained igneous rocks are also commonly formed there. Some granites and related rocks appear to have been formed as a final stage of metamorphism and recrystallization, without having been melted.

Segments of the crust were elevated from time to time by forces connected with mountain building, earthquakes and volcanic activity. Sometimes segments were uplifted in flat or tilted manner, or in broad, gentle flexures, so that streams and other erosive agencies could again begin their work of degradation, transportation and deposition. Or, particularly where great accumulations of sediments took place in geosynclines, the rocks were cast into arched or crumpled 'folds' such as may be seen on the sides of mountains carved out of sedimentary or volcanic strata. Commonly accompanying such processes were dislocations along fractures, the strata at one side of a fracture no longer matching those at the other; these are called faults, and the vibrations caused by movement along a fault produce earthquakes. Thus the earth's crust is not static, but subject to slow cyclical changes that are continuing at various places today and that culminate from time to time in pronounced disturbances called orogenies. When the highlands formed by an orogeny have been worn down and covered by later rocks a pronounced change in the kinds or structural conditions of the rocks, called an unconformity, is marked by the ancient erosional surface.

Glaciation during the Pleistocene period brought Canadian landscapes virtually to their present forms. In many mountainous regions it has continued since then. Because of fluctuations in the climate, great ice-sheets pushed slowly across almost all Canada, from centres in the Cordillera, Keewatin and Ungava. Rocks frozen in the bases of the ice-sheets and glaciers gouged and smoothed rock surfaces, and vast loads of rocks and rock particles carried by the ice were dumped as gravel or sand, or deposited as silt or clay in large temporary lakes formed by the melted ice. Both the erosive and the depositional actions greatly disorganized the pre-glacial drainage patterns, resulting in the numerous lakes, muskegs and irregular stream patterns of many localities, particularly in the Shield. Glacial deposits obscure bedrocks in most places except in the higher parts of mountains and in certain parts of the Shield where glacial scouring was more pronounced than deposition. Elsewhere outcrops are scattered, generally forming less than 10 p.c. of the surface, or are completely lacking in areas many miles in extent.

The geological processes outlined above accounted in one way or another for the raw materials of Canada's mineral industry, which includes the production of the 'fossil' fuels—coal, petroleum and natural gas. Metals are won from deposits containing metal-bearing minerals. Non-metalliferous products such as asbestos, gypsum, sand, gravel and building stone are derived from deposits of minerals like asbestos, or from beds of sedimentary rock as in the case of gypsum, or from rocks like limestone or granite as in the case of building stone, or from unconsolidated sediments like gravel, sand or clay. Coal is formed by alteration of beds in which leaves and other woody material accumulated between layers of typical sediments. Petroleum and gas resulted mainly from the fats of the innumerable organisms that inhabited the seas of former times, which became trapped in sediments. The fats decomposed slowly to form oil and gas which migrated through pores and fractures in unconsolidated sediments or sedimentary rocks to accumulate in places where geological structures were favourable and where impermeable strata overlay in such a way as to prevent escape of oil or gas. Most metal deposits are found in ancient mountain-built areas where igneous and other processes were once active, and which have been eroded deeply. Some non-metalliferous minerals, such as asbestos, are found under analogous conditions and others occur mainly in relatively undisturbed sedimentary rocks. Coal, oil and gas are found only in accumulations of sedimentary rocks younger than Precambrian because suitable organisms were absent before the Palæozoic era. Coal may be present in much-disturbed or undisturbed areas, but oil and gas are found only in moderately disturbed or undisturbed sedimentary rocks because much disturbance permits their escape.

The Canadian Shield.—The Shield is a complex assemblage of Precambrian rocks that, as a whole, represent at least five-sixths of the long duration of geological time. Most of the rocks have been subjected to more than one and in some cases several periods of orogeny, resulting in intricate structures, intense metamorphism, widespread igneous intrusions, and alteration of much ancient sedimentary rock to granite and related material. Orogenies probably occurred at many more times than suggested by the chart on p. 4, but the records of such early events are fragmentary. These complexities, combined with the absence of fossils, which facilitate the correlation of strata younger than Precambrian, hamper interpretation of the geology of the Shield. Nevertheless, progress has been accomplished and methods developed in Canada have been applied to Precambrian shields of other continents.

Because of the size of the Canadian Shield, attempts have been made to divide it into geological or structural 'provinces'. The latter are based on the general directions of structural trends and on age determinations that supply estimates of the dates of orogenies, metamorphism, or igneous intrusions. Several schemes of this kind have been suggested but final agreement on names and boundaries must await further field studies and additional age determinations. A simplified and tentative classification is illustrated by the map on the following page, which also summarizes age determinations by the Geological Survey of Canada to June 1959. According to this plan the Shield is divided into five provinces which, from northwest to northeast, are called Slave, Churchill, Superior, Grenville, and an unnamed one which in other schemes is called Labrador. Some geologists consider that a separate division called Ungava may lie north of the Superior and east of Hudson Bay, and some add another province called 'Arctic Islands' to include the part of the Shield found at and near Baffin Island. More complicated schemes subdivide the provinces into sub-provinces. The Superior and Grenville provinces contain the classical areas where the first geological investigations in the Shield were undertaken. They are, therefore, described in slightly greater detail than space permits for the other provinces.

PRINCIPAL STRUCTURAL PROVINCES OF THE CANADIAN SHIELD

Numbers indicate approximate dates (in millions of years) of main orogenies

Data from C.H. Stockwell and R.K. Wanless, to June 1960.

Geological Survey of Canada

The Superior province is underlain mainly by Archæan rocks. These are chiefly belts of metamorphosed sedimentary rocks and lavas, and intervening areas of granite and gneiss. Most of the belts trend east and west and are the remnants of strata that were intensely folded and faulted. The sedimentary phases consist largely of altered greywacke, an impure sandy rock commonly containing volcanic ash. Most of the lava contains rounded masses called 'pillows', which are characteristic of lavas that flowed under water. Most of the lava has been metamorphosed to greenish rocks to which the name 'greenstone' is often applied. In much of the province a succession of greenstones and some altered sediments, estimated to be up to 25,000 feet thick, appears to be the oldest assemblage exposed and was named the 'Keewatin' group or series by early geologists. In places it is overlain unconformably by a thick succession of sedimentary strata, mainly greywacke and slate, with conglomerate at the base; this was called the 'Timiskaming' group. Granite pebbles in the conglomerate led to the conclusion that a period of orogeny, called the Laurentian, took place at the end of Keewatin time. The Archæan era was ended by pronounced orogeny and granitic intrusion, called the Algoman. Upon the ancient land surface resulting from erosion at the end of the Archæan are found, in places, bodies of moderately folded conglomerate, arkose, quartzite, limestone, lavas and other rocks. In general these are less metamorphosed than Archæan rocks or, in some cases, unmetamorphosed. The largest assemblages of these rocks, extending fairly uninterruptedly from near Sault Ste. Marie to the northern part of Lake Timiskaming, was named the 'Huronian' by pioneer geologists in 1863. Huronian strata are intruded in places by the Killarney granite, believed to have been formed during the orogeny that marked the end of Proterozoic time. In the Port Arthur area a succession of sedimentary rocks with some volcanic flows, called the Animikie, is regarded as having been deposited in the earlier part of late Proterozoic time, and to represent the 'Upper Huronian'. Overlying the Animikie strata at some localities and directly on Archæan rocks at others is a thick succession of shale, sandstone, lava and other rocks called the 'Keweenawan' and regarded as late Proterozoic in age. These are intruded by diabase and other igneous rocks. Thus the classical subdivisions of the Precambrian rocks in the part of the Shield north of the Great Lakes are two Archæan assemblages called Keewatin and Timiskaming, probably disturbed by at least one early orogeny; a pronounced orogeny and erosional interval at the end of Archæan time; an early and disturbed Proterozoic assemblage called the Huronian; and a late Proterozoic one called the Keweenawan. Although these are the names of groups of rocks, they are sometimes also applied as the names of periods. Such periods are much longer than the periods of the Palæozoic and later eras and they cannot be applied with certainty even in all parts of the Superior province, to say nothing of the remainder of the Shield.

Processes associated in various ways with orogenies formed numerous mineral deposits far below the surface then existing. Many of these have since been exposed by the long erosion to which the Shield has been subjected. The Superior province is Canada's leading producer of metals, but it is impossible to be certain whether this is mainly because more metals were actually deposited there or because the region was more accessible for geological studies, prospecting and mining. It includes orebodies of iron at Steep Rock and Michipicoten, uranium at the base of the Huronian succession near Blind River, nickel-copper-gold ores at Sudbury, the now largely exhausted silver veins at Cobalt, the great gold deposits at Timmins, Kirkland Lake and Larder Lake, and the gold, copper and zinc deposits of the Noranda and Chibougamau areas. It also includes Canada's main lithium and molybdenum mines and the only asbestos mine in the Shield. Many of the orebodies are in or close to belts of Keewatin or Timiskaming strata, and several of the largest, as at Sudbury, Cobalt, Noranda and Chibougamau, occur relatively close to the junction of such belts with the boundary between the Superior and Grenville provinces, which is marked in places by a zone of prominent faults. In the northern part of what is classed tentatively as the Superior province on the map, gently folded strata of Proterozoic type underlying the Belcher Islands contain iron deposits that have received considerable attention. A belt of somewhat similar type crossing Ungava Peninsula from Cape Smith to Wakeham Bay contains occurrences of iron, copper, nickel, gold, zinc and lead.

The western part of the 'Labrador' area contains strata of early Proterozoic type in a belt called the Labrador Trough; the name implies that the belt was a basin of sedimentation in Precambrian time, not that it is now trough-like. It is about 600 miles long and up to 60 miles wide, extending southeasterly from Ungava Bay. Its south end is transitional into the Grenville province where more metamorphosed equivalents of the strata in the Trough, including important iron deposits, have been found. The Trough contains abundant 'iron formation' resembling that of the iron ranges in the Lake Superior region of the United States; the iron formation has been enriched in places to form the large iron deposits now being mined. East of the Trough are more intensely metamorphosed equivalents of strata in the Trough, and other rocks. North of Goose Bay, strata of early Proterozoic type form the Seal Lake belt in which numerous occurrences of copper and uranium have been found.

The Churchill province contains many northeasterly-trending belts of strata of Archæan and early Proterozoic types, with large intervening areas of granites and gneisses and large patches of strata of late Proterozoic type. Prominent among the northeasterly-trending belts is one north of Lake Athabasca which contains both strata of Archæan type called the Tazin group and of Proterozoic type called the Athabasca series; both types contain many uranium occurrences, some of which provide the ores for the important mines of the Beaverlodge area. This belt continues in a general way to Rankin Inlet on Hudson Bay; the eastern part is not known to contain many uranium occurrences but several deposits of gold and a few of copper, nickel and platinum have been found, including the deposit mined for those metals at Rankin Inlet. Belts of strata of Archæan type contain important copper-zinc deposits near Flin Flon, copper-nickel and nickel deposits near Lynn Lake and Thompson, and gold deposits at several locations.

In the northern part of the Slave province a series of altered sedimentary and volcanic strata of late Proterozoic type contains copper deposits which have attracted attention but which have not been developed. More deformed and altered rocks of early Proterozoic type east of Great Bear Lake contained the Eldorado uranium-radium orebodies that have been recently exhausted. North of Great Slave Lake northeasterly-trending bodies of greywacke, slate, and volcanic rocks called the Yellowknife group contain important gold ores. North and south of the East Arm of Great Slave Lake and in its islands, occurrences of various metals have been found and a few of gold and tungsten have been mined.

A large part of the Shield, extending from Georgian Bay to the Strait of Belle Isle, has long been recognized as forming a distinct segment called the 'Grenville'. It was named after the Grenville series, characterized by crystalline limestone, impure limy strata, and large areas of sedimentary gneisses in various stages of alteration to granite. The eastern part of the province contains large igneous intrusions of anorthosite. The age relations between Grenville strata and those of the neighbouring Superior province are puzzling. Recent work has indicated that near Sudbury, as well as at the south end of the Labrador Trough, beds can be traced across the boundary into more metamorphosed rocks of Grenville type. It is believed, therefore, that the distinctive features of the Grenville may be related more to the time and degree of metamorphism than to distinctions in the original age of deposition of strata. The Grenville province contains an unusually large variety of mineral occurrences but has not been as important a producer as the Superior. Several fairly large deposits are mined, including those of nepheline syenite near Peterborough, uranium near Bancroft, iron of the magnetite variety at Bristol and Marmora, zinc and lead in the Ottawa valley and at Tetreault west of Quebec City, and iron and titanium near Havre St. Pierre. Large iron deposits are being prepared for production at the south end of the Labrador Trough.

The Plains and Lowlands.—Sedimentary strata of Palæozoic and younger ages overlap the Shield to form the principal Plains and Lowlands. These strata once covered much more of the Shield before being removed by erosion. The Shield continues under the Plains, as is proved by numerous wells drilled for oil or gas in the Great Plains and in southern Ontario having been bottomed in typical Shield rocks, but it is customary to regard the Canadian Shield Region as the part that is exposed or covered by glacial deposits. The overlying strata are undisturbed or gently tilted or flexed, the Shield and the Plains and Lowlands together forming a central continental region that has been relatively stable since Precambrian time, while orogenies were active in the flanking geosynclinal belts now indicated by the Appalachian, Cordilleran and Innuitian mountains.

The Shield slopes at a rate of 15 feet per mile under the Great Plains, in the western part of which the overlying strata reach a thickness of 10,000 feet. The older overlying beds have been bevelled by erosion along the border of the Shield, exposing in central Manitoba sea-deposited beds of limestone, sandstone and shale of Ordovician, Silurian and Devonian ages. Farther north the exposed Palæozoic strata are mainly Devonian. The Palæozoic formations are overlain by early Mesozoic strata of marine origin and these by both marine and freshwater Cretaceous formations which are the uppermost strata in much of Saskatchewan and Alberta. In places, however, as at Turtle Mountain in Manitoba and the Cypress Hills in Saskatchewan, these are overlain by remnants of early Tertiary formations.

The rich soils of the Great Plains, particularly in the Manitoba Plain, were derived from the weathering of the underlying strata and the unconsolidated deposits resulting from glaciation. Most of Canada's oil and gas is produced from Palæozoic and Mesozoic strata underlying the Great Plains, mainly in Alberta but also in Saskatchewan, Manitoba, northeastern British Columbia and at Norman Wells in the Northwest Territories. The productive beds range from Devonian to Cretaceous in age, the reservoir rocks being largely reefs containing many openings, although 'stratigraphic' traps such as lenses of porous sediments in non-porous ones are also important. Exploration for oil and gas has recently been extended through most of the plains including those in the Arctic Archipelago. The Athabasca oil sands, extending for more than 100 miles along the Athabasca River in northern Alberta, are accumulations of heavy oil and sand of Lower Cretaceous age; the total amount of oil is estimated at 100,000 to 300,000 million barrels, more than all other known reserves of the world. Coal is being or has been produced from many places in the Great Plains. They also yield potash, salt, gypsum, limestone and other non-metalliferous products. The only important known metalliferous deposits are of zinc and lead, in Devonian limestone at Great Slave Lake.

The Arctic Lowlands and Plateaux form most of the southern part of the Arctic Archipelago, lying between the Innuitian Region and the exposed part of the Shield. They are underlain mainly by Ordovician and Silurian limestone, dolomite and shaly dolomite, but strata of Cambrian, Devonian and Tertiary ages are also present. Some of the beds contain coal. Active interest is now being shown in the oil and gas possibilities of the strata.

West and east of the Frontenac Axis, the Great Lakes and St. Lawrence Lowlands are underlain by gently dipping beds of limestone, dolomite, sandstone, and shale of Cambrian, Ordovician, Silurian, Devonian and Mississippian ages. West of the Axis they have a total thickness of 5,877 feet but few places are underlain by all formations; the greatest thickness penetrated by drilling is 4,727 feet. East of the Axis, formations in Quebec have a total thickness of at least 10,000 feet. Ordovician and Silurian strata are exposed on Anticosti Island. The first petroleum field in Canada was in the area north of Lake Erie, which is still producing natural gas and some oil. Most oil was derived from Devonian strata and most gas from Silurian. Important amounts of salt and building materials are produced from the St. Lawrence Lowlands but only a few metalliferous occurrences have been found other than the Marmora iron deposit which is in Precambrian rocks that were overlapped by a thin covering of Palæozoic strata and so are technically within the Lowlands.

Exceptions to the flat character of the St. Lawrence Lowlands are the Monteregian Hills at and near Montreal. These are the remnants of small alkaline igneous intrusions of Devonian or younger age, which are more resistant to erosion than the surrounding strata.

An area extending for about 800 miles between Churchill and the south end of James Bay is underlain by Ordovician, Silurian and Devonian strata composed largely of limestone and dolomite and by a smaller amount of Jurassic or Cretaceous strata. The thickness of this assemblage of sedimentary rocks is not well known because outcrops are scarce and little drilling has been done. Large deposits of gypsum have been found in the Devonian succession and substantial lignite deposits occur in Mesozoic beds.

The Cordilleran Region.—The Cordillera are on the site of a great geosyncline where sediments were laid down at least as early as late Precambrian time, where marine sedimentation continued in places as late as the Upper Cretaceous, and where freshwater sediments were deposited locally during the Tertiary.

In parts of the interior of British Columbia and the Yukon are exposed highly metamorphosed rocks bearing some resemblance to the Archæan of the Shield. All available evidence indicates, however, that these are partly late Precambrian and partly younger strata that were metamorphosed in pre-Permian and, probably, partly in Precambrian time.

The oldest strata whose age is clear are beds of quartzite, argillite, dolomite and other sedimentary rocks totalling many thousands of feet, principally in the Cariboo, Purcell, Selkirk and Rocky Mountains. In places, these unfossiliferous beds are overlain by others containing Lower Cambrian fossils. In general, the Cambrian rests unconformably on the rocks beneath but in many places there is no marked unconformity. It is concluded, therefore, that at least some of the Precambrian strata may be younger than any strata classed as Proterozoic in the Shield and may have been deposited during the time when the Shield was being eroded before Palæozoic sediments were deposited on it.

In the western part of the region the principal Palæozoic strata exposed are volcanic and sedimentary strata, largely limestone, of Carboniferous and Permian ages. More extensive are great accumulations of volcanic and sedimentary strata of Triassic, Jurassic and Lower Cretaceous ages. In the Eastern Cordillera the Palæozoic periods are better represented, as limestone, dolomite, quartzite, shale and other rocks of Ordovician, Silurian, Devonian, Carboniferous and Permian ages are present. These are overlain in places by shale, sandstone, limestone and other rocks ranging in age from Triassic to Upper Cretaceous. The combined thickness of strata of different ages exposed in various parts of the Rocky Mountains, including the Precambrian beds mentioned earlier, is estimated at 68,000 feet. In many parts of the Rocky Mountains, particularly along the eastern border, low-angle faults thrust Precambrian and Palæozoic strata above younger beds.

As already indicated, some evidence now largely obliterated by later events points to early orogenic activities. The principal mountain-building and igneous processes of which good evidences remain began locally in early Mesozoic time, culminated in the Western Cordillera in the Nevadan orogeny in late Jurassic and early Cretaceous time, but was not significant in the Eastern Cordillera until the Laramide orogeny early in the Tertiary. Thus the Western Cordillera were formed much earlier than the Eastern, were largely worn down by erosion by the time the Rockies and other eastern mountains were built, and the western part of the region was uplifted at the time of the Laramide orogeny so that renewed erosion could carve the surface into the present mountains and plateaux. Therefore if one stands on a peak in, say, the Coast or the Selkirk Mountains he is impressed by the uniformity of summit levels representing the ancient, uplifted surface.

The strata in the Western Cordillera are intruded by many bodies of igneous rocks, from small to very large in size. Most are granodiorite or diorite, but many others are granite, gabbro, or other related types; still others are ultrabasic, i.e., composed mainly of iron and magnesium minerals. Most are related to the Nevadan orogeny but some must have been intruded in late Cretaceous or early Tertiary time, and there is incomplete evidence that some are of ages from late Precambrian to Triassic. The intrusions are scattered widely, the largest concentration being the Coast Instrusions which form the greater part of the Coast Mountains. In a general way, this belt of intrusion swings easterly in southern British Columbia and is represented by many large and small bodies in the Kamloops Plateau and the Monashee, Selkirk and Purcell Mountains. Intrusive rocks are rarely exposed in the Eastern Cordillera, probably because the mountains there have not been eroded sufficiently to reveal many.

In the Interior belt much lava was deposited on the plateaux at various times during the Tertiary, mainly in or about Miocene time. The lavas are chiefly of the basaltic variety, and apparently issued from long fissures rather than from volcanoes. Sandstone, shale and volcanic ash were deposited in local freshwater basins in the same belt.

Mountain-building in the western part of the United States formed the Cascade and Coast Ranges there during late Tertiary or early Pleistocene times. These movements, which took place over considerable time and were accompanied by much volcanic activity, are sometimes called the Cascadian orogeny. In the Canadian Cordillera this orogeny was mainly limited to uplifts and some volcanic deposition. Some volcanic activity occurred locally as late as the post-Pleistocene, as evidenced by lava and ash resting on glaciated rocks and glacial debris and by a well-preserved cinder cone in northern British Columbia.

Glaciation was widespread in the Cordillera during the Pleistocene and glaciers persist today in many places, chiefly in the St. Elias and Coast Mountains and the Columbia Ice Field in the Rockies. A large area in Yukon Territory, however, escaped glaciation because the high St. Elias Mountains barred the moisture-laden winds from the Pacific to such an extent that ice did not form in much of the interior, despite the increased coldness of the times. This lack of glaciation was largely responsible for the preservation and discovery of the Klondike gold placers and for other characteristics of mineral deposits in the area.

The Cordilleran region was Canada's leading producer of minerals until mining in the Shield took the lead about the turn of the century. Notwithstanding greatly increased production in British Columbia, the Cordilleran region now produces only some 7 p.c. of the Canadian total because of the greatly expanded production of metals from the Shield and the value of oil and gas from the Great Plains. Metal mining in the Cordillera is and has been almost entirely in the Western Cordillera, but important quantities of coal and structural materials are obtained from the Eastern Cordillera, and much oil was produced from the Foothills in Alberta, chiefly at Turner Valley.

Broadly speaking, all parts of the Western Cordillera except those covered by Tertiary lavas or sediments are favourable for the occurrence of metals. Numerous occurrences of many kinds have been found, most having been formed directly or indirectly as a result of the Nevadan orogeny, although some mineralization attended the early Tertiary disturbances and some may have taken place before the Nevadan. British Columbia contains many large and moderate sized mines of lead, copper, zinc, gold, silver and iron, mainly along the flanks of the belt of Coast Intrusions and in the southern part of the province, where the Sullivan mine is the largest lead-zinc-silver operation in Canada and one of the largest in the world. British Columbia also contains rich mercury and tungsten mines that are now inactive because of reduced demands for these metals, and an asbestos deposit of exceptional quality which is now being mined. Barite, gypsum and structural materials are produced and extensive coalfields are available although the production of coal has declined. Yukon Territory also contains diversified mineral deposits, but mining at present is limited to rich silver-lead-zinc veins at Mayo, the waning placers of the Klondike, and coal extracted for local use.

The Appalachian Region.—This region is the northern continuation of a long belt of folded strata extending along the eastern side of the United States. It is on the site of a geosyncline that existed mainly in Palæozoic time in which great thicknesses of sedimentary and volcanic strata were laid down. The northwestern boundary of the region is a long curving fault or zone of faults which extends from Lake Champlain at least as far as the Gulf of St. Lawrence and which causes the curved shape of the northern coast of Gaspe. The strata in the Appalachians have been folded and faulted by successive periods of orogeny along axes that strike northeasterly; thus strata of different kinds and ages and belts of intrusive rocks form northeasterly-trending bands, many of which are responsible for the peninsulas, bays and ridges of the region. Three principal periods of orogeny, called the Taconic, the Acadian and the Appalachian, have been recognized. The Taconic occurred at the close of the Ordovician, the Acadian during the Devonian, and the Appalachian at the close of the Palæozoic. In Canada the Taconic disturbances were fairly widespread, the Acadian were more so, affecting areas that were previously affected by the Taconic and areas that were not, but the Appalachian orogeny, which was a major feature in parts of the United States, was of minor and local importance.

Precambrian rocks of Grenville types exposed in parts of western Newfoundland probably represent an extension of the Shield but are separated from it by younger strata along the Strait of Belle Isle. Less deformed strata, including quartzite, slate and other rocks in eastern Newfoundland and in parts of Nova Scotia and New Brunswick, bear a general resemblance to Proterozoic strata of the Shield. They are overlain unconformably by Palæozoic strata deposited intermittently from Cambrian to Pennsylvanian times. In much of the region, deposition apparently took place in local basins, strata of the same ages varying widely in kind and in their contained fossils. The rocks are largely limestone, shale, sandstone and volcanic rocks, some of the formations being of great thickness. For example, the greatest thickness of Middle Silurian beds in North America—8,427 feet of sedimentary and 4,626 feet of volcanic strata—is exposed near Chaleur Bay. Near the Bay of Fundy, Triassic sandstone with interbedded volcanic strata similar to those of the Hudson River Palisade in New York represent the youngest rocks of the Appalachian Region.

Numerous bodies of granite and related igneous rocks intrude the strata. Most of these were associated with the Acadian orogeny and were intruded in Lower, Middle and Upper Devonian times. Many bodies of ultrabasic rocks occur intermittently in northeasterly-trending belts in the Eastern Townships and in Newfoundland. Most of these intrude Cambrian and Ordovician strata and are probably related to the Taconic orogeny.

The Appalachian Region now produces about 7 p.c. of the Canadian production of minerals, including fuels. This is mainly asbestos associated with basic rocks in the Eastern Townships, iron from Ordovician sedimentary beds at Bell Island, Newfoundland, and coal from Pennsylvanian strata in Nova Scotia. The Eastern Townships contain the world's leading asbestos occurrences. Elsewhere copper, zinc, lead, gold and silver are produced, mainly from central Gaspe and central Newfoundland. Most of the deposits are related to the Acadian orogeny, as were numerous gold-bearing veins formerly mined in Nova Scotia. Gypsum, barite and salt are produced from Mississippian strata in Nova Scotia, and some gypsum is also produced in New Brunswick. From veins in granite and related rock in Newfoundland comes most of Canada's production of fluorite.

The Innuitian Region.—This mountainous belt is known mainly from reconnaissance surveys. It is underlain by moderately-to-intensely folded sedimentary, volcanic and metamorphic rocks of various ages, the oldest being probably Proterozoic and the youngest being Tertiary. Folding occurred at different times and in different directions, some before the Silurian period, some in Silurian or Devonian time, some late in the Palæozoic era, and some in Tertiary time. Five fold-belts have been recognized—Cornwallis, Parry Islands, Central Ellesmere, Northern Ellesmere, and Eureka Sound. Granitic intrusions have been found in the Northern Ellesmere belt. Lead and zinc have been reported from Little Cornwallis Island and magnetite from Axel Heiberg Island. Gypsum occurs in beds of various Palæozoic ages. Coal has been found at several places, in strata of different ages, the thickest known seams being in beds apparently of Tertiary age on Ellesmere and Axel Heiberg Islands. The less deformed parts of the region offer possibilities for oil and gas and are now being investigated by companies.

The foregoing are only brief sketches of the subjects covered. Further information is supplied by *Geology and Economic Minerals of Canada* ($2, including Map 1045A) and *Prospecting in Canada*; the latter also contains chapters on the principles of geology and on minerals and rocks. The *Geological Map of Canada* (1045A, 50 cents) and *Canada, Principal Mining Areas* (900A) are also recommended. Map 900A is revised annually; one copy is sent free to residents of Canada and additional copies are 25 cents each. These publications can be ordered from the Director, Geological Survey of Canada,* together with lists of reports and maps of the Geological Survey of Canada on specific topics and areas, for each province. Other publications are available from provincial mines departments.

PART II.—GEOGRAPHY†

Canada occupies the northern half of the North American Continent with the exception of Alaska and Greenland, extending in longitude from Cape Spear, Newfoundland, at 52° 37′ W, to Mount St. Elias, Yukon Territory, at 141° W, a distance of 88° 23′. In latitude it stretches from Middle Island in Lake Erie, at 41° 41′ N, to the North Pole. The northernmost point of land is Cape Columbia on Ellesmere Island, at 83° 07′ N. Canada is thus a western and a northern country, a fact of increasing strategic significance.

In shape, Canada resembles a distorted parallelogram with its four corners making important salients. In the north the salient formed by the Arctic Archipelago, which penetrates deep into the Arctic basin, guards the northern approaches to the Continent from Europe and Asia and makes Canada neighbour to the Union of Soviet Socialist

---

* A special article covering the history and current activities of the Geological Survey of Canada appears in the 1960 Canada Year Book, pp. 13-19, and is available from the Director in reprint form. A brief outline of the functions of the Survey is given in the Mines and Minerals Chapter of this volume (see Index).

† Revised or prepared by the Geographical Branch, Department of Mines and Technical Surveys, Ottawa.

Republics. In the south the salient of peninsular Ontario thrusts far into the heart of the United States. In the east the salient of Labrador and the Island of Newfoundland commands the shortest crossings of the North Atlantic Ocean and links Canada geographically with the United Kingdom and France. In the west the broad arc of land between Vancouver in southern British Columbia and Whitehorse in Yukon Territory provides the shortest crossings of the North Pacific Ocean between continental North America and the Far East. Canada thus lies at the crossroads of contact with the principal powers and some of the most populous areas of the world.

In size, Canada is the largest country in the Western Hemisphere and the second largest country in the world. Its area of 3,851,809 sq. miles may be compared with that of the Union of Soviet Socialist Republics, 8,649,821 sq. miles,* the United States of America (including Alaska and Hawaii), 3,615,213 sq. miles,* and Brazil, 3,287,204 sq. miles.* It is more than forty times the size of the United Kingdom and eighteen times that of France. The immense size of the country, while encompassing many resources and seeming to afford much scope for settlement, imposes its own burdens and limitations, particularly because much of the land is mountainous and rocky or is under an Arctic climate. The developed portion is probably not more than one-third of the total; the occupied farm land is less than 8 p.c. and the currently accessible productive forested land 19 p.c. of the total. The population of Canada, estimated at 17,814,000 on June 1, 1960, may be compared with 177,700,000† for the United States (including Alaska and Hawaii) (1959) and with 64,216,000† for Brazil (1959).

1.—Approximate Land and Freshwater Areas, by Province or Territory

NOTE.—A classification of land areas as agricultural, forested, etc., is given at p. 27.

Province or Territory	Land	Freshwater	Total	Percentage of Total Area
	sq. miles	sq. miles	sq. miles	
Newfoundland	143,045	13,140	156,185	4.1
Island of Newfoundland	*41,164*	*2,195*	*43,359*	*1.1*
Labrador	*101,881*	*10,945*	*112,826*	*3.0*
Prince Edward Island	2,184	—	2,184	0.1
Nova Scotia	20,402	1,023	21,425	0.6
New Brunswick	27,835	519	28,354	0.7
Quebec	523,860	71,000	594,860	15.4
Ontario	344,092	68,490	412,582	10.7
Manitoba	211,775	39,225	251,000	6.5
Saskatchewan	220,182	31,518	251,700	6.5

Section 1.—Physical Geography

Subsection 1.—Physiographic Regions

Since structure tends to dominate relief to a remarkable degree even though its effects have been modified by glacial and river erosion or deposition, the main physiographic regions of the country coincide with the geological regions, which are described in this edition in Part I on Geology. For a description of the physical structure of the country in its relation to climatic phenomena, reference should be made to a special article on The Climate of Canada appearing in the 1959 Year Book at pp. 23-51.

Subsection 2.—Inland Waters

Drainage Basins.—The inland waters of Canada (not including saltwater areas that are a part of Canada) are extensive, constituting about 7.6 p.c. of the total area of the country. They are best studied by segregating the main drainage basins, described in detail in the following special article.

THE DRAINAGE BASINS OF CANADA

The rivers of Canada drain four great basins—the Hudson Bay, the Arctic, the Atlantic and the Pacific, mentioned in order of size. The northern basins are the largest, 75 p.c. of Canada's land area being drained by northerly-flowing rivers.

The rivers have played an important role in the development of the country. In the early days of exploration they provided access to the interior and were the highways of travel and commerce as new areas opened up. Today, with the exception of the mighty St. Lawrence whose function as a transport facility has been greatly enhanced by the construction of the new Seaway, the rivers of Canada carry little commerce but the drainage basins have taken on a new importance as the bases of vast developed and potential water power resources. Locally, particularly in some drier areas of the Prairie Provinces, they are the bases of important irrigation projects.

Hudson Bay Drainage Basin

The Hudson Bay drainage basin is the largest in area and is the least important economically. Many of the rivers have been used locally for transportation, especially in earlier days by fur traders and explorers, but only the Nelson and Churchill Rivers, which have water power potential within economical distance of settled areas, are of any great significance. Island Falls on the Churchill and Grand Rapids on the Nelson are the sites of hydro-electric developments.

Several tributaries of the Nelson River are of importance to the economy of the Prairie Provinces, particularly the Saskatchewan River with its two main branches—the North Saskatchewan and the South Saskatchewan—which drain one of Canada's great agricultural regions. In the early days they were the pathways to settlement but recently their importance has settled around a number of major irrigation projects, bringing new life to a dry region.

Arctic Drainage Basin

The Arctic drainage basin is dominated by the Mackenzie, one of the world's longest rivers, which flows 2,635 miles from the head of the Finlay River to the Arctic Ocean. Although only the part of the river north from Great Slave Lake bears the name, the Mackenzie drainage basin is the largest river basin in Canada and drains an area in the three most westerly provinces of approximately 700,000 sq. miles. The Mackenzie includes among its many important tributaries such great rivers as the Peace and the Athabasca. Much of the river has been used as a highway by fur-trade canoes since the eighteenth century. Except for a 16-mile portage in Alberta, it is possible for steamboats to navigate from the end of steel at Waterways on the Athabasca River to the mouth of the Mackenzie, a distance of 1,700 miles. The navigation season begins about mid-June and ends in mid-October.

Atlantic Drainage Basin

The Atlantic drainage basin is the most important in Canada. It is dominated by the St. Lawrence–Great Lakes system, which covers an area of approximately 678,000 sq. miles and drains the industrial heart and thus the most densely populated region of the country.

The St. Lawrence is one of the great rivers of the world; the estimated flow volume of more than 400,000 cu. feet per second at its mouth is exceeded only by the Mississippi on the North American Continent. It became an important highway of transportation soon after its discovery by Jacques Cartier in 1535 and as the Canadian West opened up the St.

Geographical Branch, Department of Mines and Technical Surveys, 1960

Lawrence assumed the role of an avenue of trade with Europe. The water route has been under almost continual improvement, which has consisted of two phases—the dredging of the natural channel between Quebec and Montreal, and the making and re-making of channels around the many rapids in the river between Montreal and the Great Lakes. The work was climaxed in 1959 with the opening of the St. Lawrence Deep Waterway, a joint Canada–United States project permitting ocean-going vessels to enter the Great Lakes. The Waterway, providing cheap transportation for bulk commodities such as grain and iron ore to and from the very heart of the Continent, is expected to have considerable impact on the economy of the two countries.

The five Great Lakes, fed by the vast drainage basin, act as a mighty reservoir for the flow of the St. Lawrence River and provide a constant source of power for large hydro-electric developments.

The St. Lawrence has many tributaries of importance, the most notable being the Ottawa River, which itself has more than twenty major tributaries. These rivers were the early highways into the interior and along them in a later period moved the great timber trade. The largest tributary to the St. Lawrence below the Ottawa River is the St. Maurice, which serves both as a source of electric power and as a transport route for millions of logs destined for the large pulp and paper mills downstream. Eastward, the Saguenay River, although short, is also the source of great power development and, below Chicoutimi, is a picturesque fiord-like canal navigable by large ships.

The entire drainage area to the north of the St. Lawrence and the Great Lakes is occupied by the southern fringe of the Canadian Shield—a forested, rugged, rocky plateau region from which tributary rivers tumble over the edge of the Shield. These rivers are ideally suited to the development of electric power and for many generations have been used for transporting logs to mills downstream. The spring log runs, coinciding with the high water from melting snows, culminate winter activity in the forests for many thousands of loggers.

Several other rivers in the Atlantic drainage basin are important locally. The St. John is the principal river of New Brunswick. It flows through a fertile agricultural district and is the source of most of the province's hydro-electric power. The Hamilton River, the largest in Labrador, flows through areas containing good timber and important mineral deposits and offers the possibility of very great power development.

Pacific Drainage Basin

The Pacific drainage basin is the smallest in area of the oceanic drainage basins and contains three major rivers—the Fraser, the Columbia and the Yukon. The rivers of the Pacific basin rise in the mountains of the Cordilleran Region and flow to the Pacific Ocean over tortuous, precipitous courses, rushing through steep canyons and tumbling over innumerable falls and rapids They provide power for great hydro-electric developments and during spawning season swarm with salmon returning inland to their spawning grounds.

The Fraser River, the chief river of British Columbia, rises in the Rocky Mountains in the neighbourhood of Yellowhead Pass. Its total length is 850 miles and it has several large tributaries including the North Thompson and South Thompson Rivers. The lower Fraser valley, including the delta islands, is a rich agricultural area.

The Columbia River is, with the exception of the Yukon, the largest river on the Pacific slope of North America. It is an international river, only 459 of its 1,150-mile length being in Canada. Its great volume, coupled with a total fall of 2,650 feet during its course, gives it an enormous power potential. Recently, Canada and the United States signed agreements for the joint development of the Columbia River, a project equalling in magnitude the St. Lawrence Seaway project but having the objectives of power development, flood control and irrigation rather than primarily of transportation and then power.

The Yukon River, like the Columbia, is an international river; 714 of its 1,979 miles are in British Columbia. Although the fifth largest river in North America and the largest on the Pacific slope, the Yukon is relatively unimportant economically. The river system is navigable for river steamers, without interruption by large rapids, from Whitehorse, Y.T., to its mouth, a distance of 1,777 miles, about 510 of which are in Canada. Power development has been modest, affected by considerable differences in seasonal flow and low market potential for power in the area.

Rivers and Lakes.—Table 2 lists the principal rivers of Canada and their tributaries. The tributaries and sub-tributaries are indicated by indention of names; thus the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

The outstanding lakes of Canada are the Great Lakes, although only parts of these are in Canadian territory. The International Boundary between Canada and the United States passes through Lakes Superior, Huron, St. Clair, Erie and Ontario. Details are given in Table 3.

3.—Elevations, Areas and Depths of the Great Lakes

Lake	Elevation Above Sea Level	Length	Breadth	Maximum Depth	Total Area	Area on Canadian Side of Boundary
	ft.	miles	miles	ft.	sq. miles	sq. miles
Superior	602.23	383	160	1,302	31,820	11,200
Michigan (U.S.A.)	580.77	321	118	923	22,400	—
Huron	580.77	247	101	750	23,010	13,675
St. Clair	575.30	26	24	23	460	270
Erie	572.40	241	57	210	9,940	5,094
Ontario	245.88	193	53	774	7,540	3,727

There are no tides in the Great Lakes although considerable variation in water levels is occasioned by strong winds.

Other large lakes of Canada, ranging in area from 9,000 to 12,000 sq. miles, are Lake Winnipeg, Great Slave Lake and Great Bear Lake. Apart from these, notable for size, are innumerable lakes scattered over that major portion of Canada lying within the Canadian Shield. In an area of 6,094 sq. miles, accurately mapped, south and east of Lake Winnipeg, there are 3,000 lakes. In an area of 5,294 sq. miles, accurately mapped, southwest of Reindeer Lake in Saskatchewan, there are 7,500 lakes.

4.—Elevations and Areas of Principal Lakes, by Province

Note.—Areas given are for mean water levels. For those reservoirs and lakes for which two elevations are given, HW means high water and LW low water.

Subsection 3.—Coastal Waters*

The coastline of Canada, one of the longest of any country in the world, comprises the following estimated milages:—

Mainland—
Atlantic, 6,110; Pacific, 1,580; Hudson Strait, 1,245; Hudson Bay, 3,155; Arctic, 5,770; total, 17,860 miles.

Islands—
Atlantic, 8,680; Pacific, 3,980; Hudson Strait, 60; Hudson Bay, 2,305; Arctic, 26,785; total, 41,810 miles.

A comprehensive description of the coastal waters of Canada would require information from sciences such as oceanography, marine biology and meteorology. However, the basic factor in any study of the oceanic-continental margin is the physical relief of the sea floor and the scope of the information presented here is therefore restricted to this and a few salient features of the Atlantic, Arctic and Pacific marginal seas surrounding Canada.

Atlantic.—Along this coastal area, the sea has inundated valleys and lower parts of the Appalachian Mountains as well as those of the Canadian Shield. The submerged Continental Shelf, protruding seaward from the shore, effects the transition from continental to oceanic conditions. This Shelf is distinguished by great width and diversity of relief. From the coast of Nova Scotia its width varies from 60 to 100 miles, from Newfoundland 120 to 50 miles (at the entrance of Hudson Strait), and northward it merges with that of the Arctic Ocean. The outer edge of the Shelf, known as the Continental Shoulder, is of varying depths of from 100 to 200 fathoms before the Shelf suddenly gives way to the steep declivity leading to abyssal depths. The over-all gradient of the Atlantic Continental Shelf is slight but the whole area is studded with shoals, plateaux, banks, ridges and islands and the coasts of Nova Scotia and Newfoundland are rugged and fringed with islets and shoals. Off Nova Scotia the 40-fathom line lies at an average of 12 miles from the shore and constitutes the danger line for coastal shipping. The whole floor of the marginal sea appears to be traversed by channels and gullies cutting well into the Shelf.

The main topographical features of the Atlantic marginal sea floor are attributed to glacial origin but land erosion is an important factor. Eroded materials are carried seaward by rivers, ice and wind, and wave action against cliffs and shore banks washes away enormous masses that are deposited over the surrounding sea floor. The topography of the continental sea floor is therefore constantly changing and navigation charts of Canada's eastern seaboard must be continuously revised.

Arctic.—The submerged plateau protruding from the northern coast of North America is a major part of the Great Continental (or Polar) Shelf surrounding the Arctic Ocean on which lie all the Arctic islands of Canada, Iceland, Greenland and most of those of

---

* The Federal Government's oceanographic research program is outlined in Chapter XI on Mines and Minerals, Section 2, Subsection 1.

Europe and Asia. This Shelf develops its maximum width on the 80th meridian of west longitude where it extends from the south of James Bay to the north coast of Ellesmere Island, a distance of over 2,000 miles.

The floor topography of this continental margin is largely unexplored but sufficient has been charted to indicate an abrupt break at the northern oceanward edge. This steep continental terrace borders the whole western side of the Canadian Archipelago and constitutes one of the most striking and significant features of the Polar regions. From this declivity, deep well-developed troughs cut by glaciers enter between the western group of islands. A ridge across Davis Strait on which the depth is about 200 fathoms separates this basin from the open Atlantic.

Hudson Bay and Hudson Strait bite deeply into the Continent. Hudson Bay is an inland sea 250,000 sq. miles in area having an average depth of about 70 fathoms; the greatest charted depth in the centre of the Bay is 141 fathoms.

Hudson Strait separates Baffin Island from the continental coast and connects Hudson Bay with the Atlantic Ocean. It is 430 miles long and from 37 to 120 miles wide and its greatest charted depth of 481 fathoms is close inside the Atlantic entrance. Great irregularities of the sea floor are indicated but, except in inshore waters, few navigation hazards have been located.

That part of the Continental Shelf bordering the Arctic Ocean at the northwest edge of the Queen Elizabeth Islands is currently the subject of extensive study. In 1959, a party based at the joint Canadian–United States weather station at Isachsen on Ellef Ringnes Island made a reconnaissance survey of the oceanography, hydrography, submarine geology, gravity and magnetic features of the Shelf area, together with physiographic, hydrological and glaciological studies of the adjacent and intervening islands. These studies were carried out in preparation for an intensive program of survey and research started in 1960, which should ultimately yield detailed and accurate information on the physical and chemical composition and dynamic characteristics of the Arctic oceanic waters; the extent, topography and structure of the Shelf and the nature of its sediments, its underlying rocks and its possible mineral resources; the factors controlling the development of the Arctic landscape and the evolution of the islands; and the behaviour of sea level, glaciers, sea ice and climate in the recent geological past. Detailed studies are being carried out first on that part of the Continental Shelf lying out to sea from, and between, Meighen Island and Borden Island, with a reconnaissance to the southwest. The work will continue until all of the Canadian sector of the Polar Continental Shelf has been investigated.

Pacific.—The marginal sea of the Pacific differs strikingly from the other marine zones of Canada. The hydrography of British Columbia is characterized by bold, abrupt relief—a repetition of the mountainous landscape. Numerous inlets penetrate the mountainous coast for distances of 50 to 75 miles. They are usually a mile or two in width and of considerable depth, with steep canyon-like sides. From the islet-strewn coast, the Continental Shelf extends from 50 to 100 sea miles to its oceanward limit where depths of about 200 fathoms are found. There the sea floor drops rapidly to the Pacific Deeps, parts of the western slopes of Vancouver Island and the Queen Charlotte Islands lying only four miles and one mile, respectively, from the edge of the declivity. These great detached land masses are the dominant features of the Pacific marginal sea. As is to be expected in a region so irregular in hydrographic relief, shoals and pinnacle rocks are numerous, necessitating cautious navigation. A grave menace to coastal shipping plying the Seymour Narrows between Vancouver Island and the mainland was eliminated on Apr. 5, 1958 when the twin peaks were blasted off Ripple Rock in one of the largest non-atomic explosions created by man. The peaks had reached to within 9 feet and 21 feet of the surface during low water, and had been responsible for the sinking and damaging of some 114 vessels during the preceding 80 years. Their presence caused treacherous disturbances and whirlpools to form as the ocean tides rushed through the Narrows, and only the most highly powered vessel would attempt to navigate the channel during any period other than the 20 to 40 minutes of slack water between tides. The blast increased the clearance to 47 feet and 69 feet at low water and the channel is now navigable at all times.

Subsection 4.—Islands

The largest islands of Canada are in the north and all experience an Arctic climate. The northern group extends from the islands in James Bay to Ellesmere Island which reaches 83°07′N. Those in the District of Franklin lie north of the mainland of Canada and are generally referred to as the Canadian Arctic Archipelago; those in the extreme north—lying north of the M'Clure Strait–Viscount Melville Sound–Barrow Strait–Lancaster Sound water passage—are known as the Queen Elizabeth Islands.

On the West Coast, Vancouver Island and the Queen Charlotte Islands are the largest and the most important but the coastal waters are studded with many small rocky islands.

The Island of Newfoundland forming part of the Province of Newfoundland, the Province of Prince Edward Island, Cape Breton Island forming part of the Province of Nova Scotia, Grand Manan and Campobello Islands forming part of the Province of New Brunswick, and Anticosti Island and the Magdalen group included in the Province of Quebec are the chief islands off the East Coast.

Notable islands of the inland waters include Manitoulin Island (1,068 sq. miles in area) lying in Lake Huron, the so-called Thirty Thousand Islands of Georgian Bay and the Thousand Islands in the outlet from Lake Ontario into the St. Lawrence River.

5.—Islands over 2,000 Square Miles in Area

Subsection 5.—Mountains and Other Heights

The predominant geographical feature in Canada is the Great Cordilleran Mountain System which contains many peaks over 10,000 feet in height. The highest peak in Canada is Mount Logan in the St. Elias Mountains of Yukon Territory, which rises 19,850 feet above sea level. The highest elevations in all parts of the country are shown in Table 6 in feet above mean sea level.

6.—Principal Heights in each Province and Territory

NOTE.—Certain peaks, indicated by an asterisk (*), form part of the line of demarcation between political subdivisions. Although their bases technically form part of both areas, they are listed only under one to avoid duplication.

Section 2.—Physical and Economic Features of the Provinces and Territories

Politically, Canada is divided into ten provinces and two territories. Each of the provinces is sovereign in its own sphere, as set out in the British North America Act of 1867 and its amendments, and as new provinces have been organized (see p. 50) they have been granted political status equivalent to that of the original provinces. The Yukon and Northwest Territories are administered by the Federal Government, although they are gaining an increasing voice in their affairs through elected representatives in the House of Commons, through elected representatives on the Territorial Councils, and through municipal and other local organizations. The main physical and economic features of each of the provinces and of the territories are described briefly in the 1956 Year Book at pp. 12-17. The physical characteristics of the provinces and territories are also covered very adequately in their relation to climate in the special article on The Climate of Canada which appears in the 1959 edition at pp. 23-51. Details of resources and their development are given in later chapters of this volume.

PART III.—LAND RESOURCES AND PUBLIC LANDS

Section 1.—Land Resources

Information currently available regarding Canada's vast land resources is shown in Table 1, where the land area is classified as occupied agricultural, forested and 'other' land, the latter including urban land, road allowances, grass and brush land and all waste land such as open muskeg, swamp and rock. Soil surveys now under way by the Department of Agriculture will make it possible in the future to estimate the amount of arable land Canada possesses and, as provincial inventories are completed, more information will be available regarding land now non-forested but not productive in an agricultural sense. The Department of Forestry estimates that about 48 p.c. of the land area of Canada is forested and, according to the Census of 1956, less than 8 p.c. is classed as occupied farm land. A great part of the 1,607,121 sq. miles of 'other' land is located in the Yukon and Northwest Territories which together have a land area of 1,458,784 sq. miles. The occupied farm land in these Territories is practically nil and the forested area is estimated at 275,800 sq. miles.

1.—Land Area classified as Occupied Agricultural or Forested, by Province

NOTE.—Figures for occupied agricultural land were obtained from the 1956 Census; areas of forested land were compiled by the Department of Forestry from estimates supplied by the Forestry Service in each province.

[1] Includes Gatineau Park (86 sq. miles) and Quebec Battlefields Park (0.36 sq. mile) which are under federal jurisdiction but are not technically National Parks.
[2] Less than one square mile.
[3] Includes 952,849 sq. miles set aside by Order in Council as native game preserves in which only Indians and Eskimos may hunt, but which are not regarded as National Parks.
[4] Includes Wood Buffalo Park (13,675 sq. miles) which, although established under the National Parks Act, is administered by the Northern Administration Branch, Department of Northern Affairs and National Resources.
[5] That part of Wood Buffalo Park in N.W.T.
[6] A forest experiment area of 25 sq. miles is included in National Parks figure.
[7] Provincial forest reserves are also used to some extent as recreational areas.

Subsection 1.—Federal Public Lands

Public lands under the administration of the Federal Government comprise lands in the Northwest Territories including the Arctic Archipelago and the islands in Hudson Strait, Hudson Bay and James Bay, lands in Yukon Territory, Ordnance and Admiralty Lands, National Parks and National Historic Sites, Forest Experiment Stations, Experimental Farms, Indian reserves and, in general, all public lands held by the several Departments of the Federal Government for various purposes connected with federal administration (see Table **2**). These lands are administered under the Territorial Lands Act (RSC 1952, c. 263) and the Public Lands Grants Act (RSC 1952, c. 224) which became effective June 1, 1950 and replaced previous legislation.

The largest areas under federal jurisdiction are in the Northwest Territories and Yukon Territory where only 77 sq. miles of a total area of 1,511,979 sq. miles are privately owned. This part of the national domain, with the exception of the islands in Hudson Bay and James Bay, is all north of the 60th parallel of latitude and occupies about 40 p.c. of the surface of Canada. It is under the administration of the Northern Administration Branch of the Department of Northern Affairs and National Resources.

Subsection 2.—Provincial Public Lands

Public lands of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia (except the Railway Belt and Peace River Block) have been administered since Confederation by the provincial governments. In 1930 the Federal Government transferred the unalienated portions of the natural resources of Manitoba, Saskatchewan and Alberta and of sections of British Columbia to the respective governments, and all unalienated lands in the Province of Newfoundland, except those administered by the Federal Government, became provincial public lands under the Terms of Union on Mar. 31, 1949. All land in the Province of Prince Edward Island has been alienated except 126 sq. miles under federal or provincial administration.

Information regarding provincial public lands may be obtained from the respective provinces. (See the Directory of Sources of Official Information, Chapter XXVI, under "Lands".)

Subsection 3.—National and Provincial Parks

The future of Canada in the field of outdoor recreation is being wisely provided for by the establishment of National and Provincial Parks. Many of these parks are easily accessible by highway, rail or air and offer every type of accommodation from camping facilities to cabins and palatial hotels. A wide variety of summer and winter recreational attractions is available in mountain, lakeland, woodland and seaside areas of exceptional scenic beauty.

The extent of the park areas in each province is given in Table **2**; location, year of establishment, area, and main characteristics of each National Park are given in Table **3**, which is followed by a brief description of the Provincial Parks.

National Parks.—Since 1885 when the first National Park was established around the mineral hot springs in western Alberta at what is now Banff, 18 areas with a total extent of more than 29,200 sq. miles have been established as National Parks. These parks are maintained by the Federal Government for the protection of their flora, fauna and natural phenomena, and for the preservation of their scenic beauty and national interest. They are administered by the National Parks Branch, Department of Northern Affairs and National Resources, and are developed and maintained in such manner as to constitute museums of nature for the perpetual inspiration, education and recreational use of present and future generations.

The National Parks are among Canada's greatest visitor attractions. All types of accommodation are available in privately owned hotels, chalets, lodges, motels and bungalow camps. In many parks, modern camp grounds and trailer sites have been prepared for the use of visitors travelling with their own camping equipment. Numerous recreational facilities are available—supervised bathing beaches, playgrounds, golf courses, tennis courts, bowling greens and athletic fields. In Banff, Kootenay and Jasper Parks where hot mineral springs occur, the Parks Service has provided outdoor pools, plunge baths and dressing-room facilities, and in other parks outdoor pools, with heated water, have been built. Several of the western parks are year-round resorts—at Banff, Jasper, Waterton Lakes and Mount Revelstoke Parks the skiing is excellent. Ski lifts and tows are in operation in Banff and Jasper Parks, and a chair lift on Mount Norquay and a sedan lift on Whitehorn Mountain, both in Banff, are added attractions. The chair lift on Mount Norquay and a gondola lift on Sulphur Mountain in Banff Park are operated for sightseeing purposes during the summer months. Of special interest to visitors is the Banff School of Fine Arts, where summer courses are conducted by the University of Alberta; also, the New Brunswick School of Arts and Crafts, operated by the provincial Department of Industry and Development, gives short courses in handicrafts to persons holidaying in Fundy Park.

A park warden service is supervised by the park superintendents to protect the forest and wildlife and to maintain constant vigilance for the safety and comfort of visitors. Angling opportunities in park waters are improved and extended by the stocking of game fish, a program assisted by the operation of fish hatcheries in three of the mountain National Parks. The Scientific Management of Game Fish in Canada's National Parks is the subject of a special article on pp. 35-39 of the 1956 Year Book. Two of the National Parks, Wood Buffalo and Elk Island, form sanctuaries for herds of buffalo and other forms of wild animal life.

In addition to the scenic, recreational and wild animal parks, Canada has 20 national historic parks. The National Parks Branch of the Department of Northern Affairs and National Resources is also responsible for the marking, preservation and restoration of places of national historic interest in Canada. More than 550 such sites have been marked on the recommendation of the Historic Sites and Monuments Board of Canada.

3.—Location, Year Established, Area and Characteristics of National Parks

Park	Location	Year Established	Area	Characteristics
			sq. miles	
Scenic, Recreational and Animal Parks				
Terra Nova	On Bonavista Bay, Newfoundland, 150 miles north of St. John's.	1957	156.0	Maritime area now under development; rocky headlands, wooded areas with abundant wildlife, off-shore and fresh-water fishing. Serviced camp ground.
Prince Edward Island	North shore of Prince Edward Island.	1937	7.0	Strip 25 miles long on shores of the Gulf of St. Lawrence. Recreational area, fine bathing beaches. Accessible by highway. Hotel and bungalow cabin accommodation. Serviced camp grounds.
Cape Breton Highlands	Northern part of Cape Breton Island, N.S.	1936	367.0	Rugged Atlantic coast line with mountain background. Fine seascapes. Recreational opportunities. Hotel and bungalow cabin accommodation. Serviced camp grounds.
Fundy	On Bay of Fundy between Moncton and Saint John in New Brunswick.	1948	79.5	Delightful recreational area. Forested region, wildlife sanctuary, rugged terrain. Bungalow cabin accommodation. Serviced camp grounds.
Georgian Bay Islands	In Georgian Bay, north of Midland, Ont.	1929	5.4	Recreational and camping area. Unique pillars on Flowerpot Island. Accessible by boat from nearby mainland points. Serviced and unserviced camp grounds on Beausoleil Island.

3.—Location, Year Established, Area and Characteristics of National Parks—continued

Park	Location	Year Established	Area	Characteristics
			sq. miles	
Scenic, Recreational and Animal Parks—continued				
Point Pelee	On Lake Erie in southwestern Ontario.	1918	6.0	Recreational area. Remarkable beaches, southern flora. Resting place for migratory birds. Accessible by highway. Hotel and bungalow cabin accommodation. Serviced camp ground.
St. Lawrence Islands	In St. Lawrence River between Brockville and Kingston, Ont.	1914	172.0 (acres)	Mainland area and 12 islands among Thousand Islands. Recreational and camping area. Accessible by highway; by boat from nearby mainland points.
Riding Mountain	Southwestern Manitoba, west of Lake Winnipeg.	1929	1,148.0	Playground and wildlife sanctuary on summit of escarpment. Fine lakes. Accessible by highway. Hotel and bungalow cabin accommodation. Serviced and unserviced camp grounds.
Prince Albert	Central Saskatchewan, north of Prince Albert.	1927	1,496.0	Forested region dotted with lakes and interlaced with streams. Summer playground and recreational area. Accessible by highway. Hotel and bungalow cabin accommodation. Serviced and unserviced camp grounds.
Banff	Western Alberta, on east slope of Rockies.	1885	2,564.0	Magnificent scenic area; noted resorts, Banff and Lake Louise. Mineral hot springs; summer and winter sports. Accessible by rail and highway. Hotel and bungalow cabin accommodation. Serviced and unserviced camp grounds.
Elk Island	Central Alberta, near Edmonton.	1913	75.0	Fenced preserve containing large herd of buffalo; also deer, elk and moose. Popular recreational area. Accessible by highway. Bungalow cabin accommodation and serviced camp ground.
Jasper	Western Alberta, on east slope of Rockies.	1907	4,200.0	Mountain playground and noted wildlife sanctuary. Majestic peaks, ice fields, beautiful lakes and famous resort, Jasper. Mineral hot springs, summer and winter sports. Accessible by rail and highway. Hotel and bungalow cabin accommodation. Serviced and unserviced camp grounds.
Waterton Lakes	Southern Alberta, adjoining Glacier Park in Montana, U.S.A.	1895	203.0	Canadian section, Waterton-Glacier International Peace Park. Mountain playground with spectacular peaks and beautiful lakes. Accessible by highway. Hotel and bungalow cabin accommodation. Serviced and unserviced camp grounds.
Glacier	Southeastern British Columbia, on summit of the Selkirk Range.	1886	521.0	Superb alpine region, towering peaks, glaciers and forests. Accessible by rail only. Climbing, skiing, camping.
Kootenay	Southeastern British Columbia, on west slope of Rockies.	1920	543.0	Encompasses Vermilion-Sinclair section of Banff - Windermere Highway. Broad valleys, deep canyons, mineral hot springs. Hotel and bungalow cabin accommodation. Serviced and unserviced camp grounds.
Mount Revelstoke	Southeastern British Columbia, on west slope of Selkirks.	1914	100.0	Rolling mountain-top plateau. Colourful alpine meadows. Accessible by secondary highway. Summer accommodation in Park; all-year accommodation in town of Revelstoke. Championship ski runs and ski jump. Unserviced camp grounds.

3.—Location, Year Established, Area and Characteristics of National Parks—continued

Park	Location	Year Established	Area	Characteristics
			sq. miles	
Scenic, Recreational and Animal Parks—concluded				
Yoho	Eastern British Columbia, on west slope of Rockies.	1886	507.0	Lofty peaks, magnificent waterfalls, colourful lakes. Yoho and Kicking Horse Valleys. Accessible by rail and highway. Hotel and bungalow cabin accommodation. Serviced and unserviced camp grounds.
Wood Buffalo[1]	Partly in Alberta and partly in Northwest Territories, between Athabasca and Slave Rivers.	1922	17,300.0	Immense region of forests and open plains. Home of largest remaining herd of bison on the Continent. Other wildlife abundant.
Historic Parks			acres	
Signal Hill	St. John's, Nfld.	1958	243.4	Location of military installations and site of operations and battles in 1700's. Cabot Tower.
Fort Amherst	Prince Edward Island, near Rocky Point.	1959	222.0	Remaining earthworks of original fort.
Fort Anne	Nova Scotia, at Annapolis Royal.	1917	31.0	Site of early Acadian settlement. Museum and well-preserved earthworks.
Fortress of Louisbourg	Cape Breton Island, N.S., 25 miles from Sydney.	1941	339.5	Ruins of walled city erected by the French, 1713-58. Interesting excavations. Museum.
Halifax Citadel	Halifax, N.S.	1956	36.9	Defence post constructed 1828-35. Museums.
Port Royal	Port Royal, N.S., 8 miles from Annapolis Royal.	1941	20.5	Restoration of "Habitation"—first fort built in 1605 by Champlain and DeMonts.
Alexander Graham Bell	Baddeck, N.S.	1955	14.0	Museum contains mechanical and documentary records of research by the inventor.
Grand Pré	Grand Pré, N.S.	1957	14.0	Commemorates the story of the Acadians.
Fort Beauséjour	New Brunswick, near Sackville.	1926	81.3	Site of French fort erected in middle of 18th century. Museum.
Fort Moncton	New Brunswick, near Shediac.	1929	2.1	Built in 1751 by the French; captured by British in 1755. Contains remains of trenches. Lighthouse.
Fort Chambly	Chambly, Que.	1941	2.5	Original French fort built on Richelieu River in 1665 was burned. Present fort built by English in 1709-11. Museum.
Fort Lennox	Île aux Noix, Que., near St. Johns.	1941	210.0	Original fort, Île aux Noix, built by French in 1759. Fort Lennox built by English in 1820's.
Cartier-Brébeuf	Quebec, Que.	1957	14.0	Commemorates the 1535 wintering of Jacques Cartier and party.
Sir Wilfrid Laurier's Birthplace.	St. Lin, Que.	1941	1.0	Original house containing furniture of the period.
Fort Malden	Amherstburg, Ont.	1941	8.0	Site of defence post built 1797-99. Museums.
Fort St. Joseph	St. Joseph's Island, Ont.	1926	47.0	Site of most westerly military post in Upper Canada. Built in 1796-99. Active in War of 1812-14. Remains of some of old fort buildings.
Fort Wellington	Prescott, Ont.	1941	8.5	Defence post built 1812-13. Museum.

Provincial Parks.—In addition to the National Parks described above, most of the provincial governments have established parks within their boundaries. These parks, in the same way as the National Parks, are areas of scenic or other interest, preserved and maintained for the benefit of the public although many of them are still undeveloped. The more important parks in each province are mentioned briefly in the following paragraphs.

Newfoundland.—There are 73 sq. miles of provincial parkland in Newfoundland. Sir Richard Squires Memorial Park, an area of 6 sq. miles on the Upper Humber River, and Butterpot Park, an area of 7 sq. miles near St. John's, are under development. Two larger areas—42 sq. miles on the west coast known as Serpentine Park and 16 sq. miles in central Newfoundland—are undeveloped. In addition, 12 rest and camping parks have been completed along the route of the Trans-Canada Highway, each park containing about 100 acres.

Prince Edward Island.—Three properties consisting of 150 acres have been developed as provincial parks: Strathgartney Park, a 40-acre tract of land at Churchill on the Trans-Canada Highway between Charlottetown and Borden, is an excellent picnic and camp site with attractive hardwood groves, fresh spring water and a beautiful view over West River and the surrounding country; Lord Selkirk Park at Eldon has an area of 30 acres and is of historic interest in that it contains an old French cemetery and marks the spot on the shoreline where Lord Selkirk landed; Brudenell River Park at Roseneath along the shore of the Brudenell River comprises 80 acres, much of it woodland. These parks are maintained by the Department of Industry and Natural Resources. Another 200-acre tract, to be known as Sir Andrew MacPhail's Park, is under development.

Nova Scotia.—Good progress is being made in the establishment of picnic and camping facilities under the Department of Lands and Forests provincial parks program, which provides for the construction of such parks to specified minimum standards. By the end of 1960, 14 picnic and six camping areas had been opened and plans were under way to establish additional parks to be located at naturally scenic spots on or close to the Trans-Canada and other well-travelled highways throughout the province. Several privately owned areas were donated for this purpose and the possibilities of others were being assessed prior to devolopment planning.

The Department operates the Provincial Wildlife Park at Shubenacadie, a 30-acre tract of land maintained in its natural state, as far as is consistent with the need for providing food and protection for the animals and birds that are its main attraction. Facilities of the Park are such that visitors, numbering about 200,000 annually, may see the wildlife at close range. Expansion is planned as more varieties of animals and birds become available and can be absorbed.

Quebec.—The Province of Quebec has established six provincial parks and seven Fish and Game Reserves. Five of the park areas are quite extensive. Saguenay Park, on the north shore of the St. Lawrence River in Saguenay County, has an area of 21,000 sq. miles; La Vérendrye Park, 140 miles northwest of Montreal, has an area of 4,746 sq. miles; Laurentide Park, 30 miles north of Quebec City, is 3,612 sq. miles in extent; Mont Tremblant, 80 miles north of Montreal, 1,223 sq. miles; and Gaspesian Park, Gaspe Peninsula, 514 sq. miles. Mount Orford Park, situated 15 miles west of Sherbrooke, has an area of 15 sq. miles.

The Fish and Game Reserves together occupy more than 10,000 sq. miles. The Chibougamau Reserve and the Mistassini Reserve, both northwest of Lake St. John, cover 3,400 sq. miles and 5,200 sq. miles, respectively. Smaller reserves are the Kipawa Reserve in the Témiscamingue district, the Shickshock Reserve adjoining Gaspesian Park, and the Petite Cascapedia and the Port Daniel, reserved for salmon and trout fishing, both of which lie along the Bay of Chaleur in Gaspe Peninsula.

These parks and reserves are wilderness areas of great scenic interest—for the most part mountainous country threaded with many rivers, lakes and streams and abounding in wildlife. In all of them, except Mount Orford, excellent fishing may be found and most of them have been organized to accommodate sportsmen and tourists in camps, cottages and lodges. Mont Tremblant is a famous resort area in both summer and winter and is easily reached by highway from Montreal. The Department of Game administers the parks and reserves, and also six salmon streams which are open to anglers.

Ontario.—The provincial park program in Ontario has been greatly expanded in recent years—only six provincial parks were in existence in 1954 but such parks now number 54 and, in addition, 23 provincial camp and picnic grounds and four provincial picnic grounds have been established.

The four largest provincial parks—Algonquin, Quetico, Lake Superior and Sibley—together have an area of nearly 4,700 sq. miles. Algonquin, 180 miles north of Toronto and 105 miles west of Ottawa, has several camp grounds which are accessible by car from Highway 60 and its numerous waterways may be traversed and enjoyed by canoe. There are several commercial children's camps in the Park but the present administration policy is to provide development facilities, such as camp grounds, on the Park fringes and to retain the interior in a natural condition. The interiors of Quetico and Lake Superior Parks are also retained as wilderness areas with only fringe development. Quetico Park is accessible by road at the Dawson Trail Campground on French Lake, and also by water via Basswood Lake in the south. Highway 17 north from Sault Ste. Marie provides access to Lake Superior Park, and Sibley Park may be reached by road from Highway 17 east from Port Arthur. There are nominal charges for entry of automobiles into provincial parks and into camp and some picnic grounds; charges for camping overnight are also nominal.

In addition to established parklands, other areas are in process of acquisition, are reserved for future development, or are being investigated. Under the Wilderness Areas Act, which came into effect in 1959, 28 such areas have now been established. These tracts of land, widely distributed across the province, vary in size, character and significance but all are regarded as important for their historical, scientific, aesthetic or cultural values. The largest is a 225-sq. mile area of treeless tundra in the northeastern tip of the province, jutting out at the base of Hudson Bay where it meets James Bay. All the other areas are small and none exceeds 640 acres. Perhaps the most widely known is the Sleeping Giant, a geological formation resembling a recumbent man, in Thunder Bay at the Lakehead.

The parklands of Ontario are administered by the Parks Branch of the Department of Lands and Forests, Parliament Buildings, Toronto, from which detailed information in booklet form is available.

Manitoba.—The Province of Manitoba has established 66 areas, totalling 978 sq. miles, as roadside parks and recreational areas. Also in the province are ten forest reserves having a total area of 5,350 sq. miles, which are used to a certain extent for recreational purposes.

Saskatchewan.—Saskatchewan has 13 provincial parks with a total area of about 1,600 sq. miles. Cypress Hills, Duck Mountain, Greenwater Lake, Moose Mountain and Valley Centre are operated as summer resorts with chalet, lodge, cabin and trailer accommodation as well as camping and picnic facilities. The other parks have camping, picnicking, boating and swimming facilities. Recreational activities include fishing, boating, swimming, golf, tennis, dancing, baseball, hiking, nature study, horseback riding, etc., and the parks are all well fitted with playground and beach equipment for children. In Cypress Hills Park, elk, antelope, deer, sharp-tailed grouse and beaver are plentiful and brook and other trout abound in the streams and lakes. Heavy stands of tall, straight lodgepole pine provide forest cover in this area. In Duck Mountain, Moose Mountain and Greenwater Lake Parks, moose, elk, deer, bear and beaver are common as well as several varieties of grouse, and many species of water and smaller land birds. Spruce, poplar and white birch provide excellent cover for wildlife. Pickerel, pike and perch are prevalent in most of the lakes. Lake trout are ardently sought by fishermen in the northern lakes.

Sites of historic interest are marked throughout the province and include the Touchwood Hills Hudson's Bay Post, where picnic facilities are available.

Alberta.—In Alberta, 41 provincial parks have been established, with a total area of about 139 sq. miles. Of these, 36 are under development. Cypress Hills Provincial Park, with an area of 77 sq. miles, is the largest and is situated in the southeast portion of the province. The other Parks under development are: Aspen Beach, Beauvais Lake, Big Hill Springs, Bow Valley, Bragg Creek, Crimson Lake, Cross Lake, Dillberry Lake, Entrance, Garner Lake, Gooseberry Lake, Hommy, Kinbrook Island, Lac Cardinal, Little Bow, Little Fish Lake, Long Lake, Ma-Me-O Beach, Miquelon Lake, Moonshine Lake, O'Brien, Park Lake, Pembina River, Red Lodge, Rochon Sands, Saskatoon Island, Steveville Dinosaur, Taber, Thunder Lake, The Vermilion, Wabamun Lake, Williamson, Willow Creek, Winagami Lake, Woolford, and Writing-on-Stone. These parks generally are provided with picnic, camping and playground facilities and are maintained by the Department of Lands and Forests primarily for the recreation and enjoyment of the residents of the province. A former provincial park—Sylvan Lake—is now operated by the Department of Highways as a camp site.

In addition to the recreational parks, seven sites, with a total area of 119 acres, have been established to mark and preserve locations of historic interest in the province. They include: Fort DeL'Isle, Fort Vermilion, Ribstones, Twelve Foot Davis, Massacre Butte, Early Man, and Standoff.

British Columbia.—There are 165 provincial parks in British Columbia with a total area of about 13,162 sq. miles. These parks are classified as A, B and C. Class A parks are those considered most highly for immediate recreational development and are strongly protected. Class B parks are areas slated for development—valuable wilderness areas or places set aside for a specific reason. Class C parks are intended primarily for the use of local residents and are usually under Board management. The parks are in all stages of development and dedicated to a variety of recreational uses. There are immense wilderness areas such as Tweedsmuir and Wells Gray Parks and outstanding scenic and mountain places which include Garibaldi, Mount Robson and E. C. Manning Parks. Thousands of city dwellers throng to the ski slopes of Mount Seymour or picnic at Cultus Lake Park. The formal gardens of Peace Arch are a monument to the goodwill between Canada and the United States. Vancouver Island has a chain of small forest parks that have achieved a tremendous popularity with tourists—the best known are Little Qualicum Falls and Miracle Beach. In addition there is a camp-site system closely integrated with the provincial parks, many camp sites actually being located in the parks. The famous gold town of Barkerville has become the first Provincial Historical Park. A new venture is the establishment of a marine park system; there are now five marine parks, all with water access.

Subsection 4.—Canada's National Capital*

Ottawa, the city selected by Queen Victoria in 1857 to be the seat of government for the Province of Canada in British North America, was designated the National Capital upon Confederation on July 1, 1867. The community had grown out of the military and construction camp that served as headquarters for the building of the Rideau Canal, a project carried out between 1826 and 1932 to establish a safe navigable waterway between Lake Ontario and the Ottawa River. The building of the Canal was the crowning achievement in the life of a distinguished British military engineer, Lieutenant-Colonel John By, R.E., who gave his name to the new settlement inhabited mainly by stone masons and discharged soldiers. As time passed, Bytown prospered as a timber centre and was incorporated as a town in 1847. Then, on Dec. 18, 1854, by Act of the Legislature of the Canadas, the name of Bytown was changed to Ottawa and under that name the community was incorporated as a city on Jan. 1, 1855.

The city, situated in an area of great natural beauty and surrounded by waterways, has remained a self-governing municipality and, although throughout the years the Federal Government co-operated with the municipal authorities in the development of a system of driveways and parks, the city expanded without the benefit of a comprehensive plan. However, in 1950 a Master Plan was presented to the Government of Canada, designed to guide the development of the Capital's urban area over the following half-century and to protect the beauty of the surrounding National Capital Region. This Region originally covered 900 sq. miles but was increased in 1959 to 1,800 sq. miles—half in the Province of Ontario and half in the Province of Quebec. Although the successful implementation of the Plan is dependent upon the co-operation of the cities of Ottawa and Hull—which are treated as a physical, social and economic whole—and of about sixty other autonomous municipalities and the two provincial governments involved, the National Capital Plan is not officially recognized by the Governments of Ontario and Quebec, and the City of Ottawa has as yet no municipal plan to govern its growth and development.

The federal agency responsible for the planning of Canada's Capital is the National Capital Commission, created in 1959 to replace the Federal District Commission which, in turn, was the lineal descendant of the Ottawa Improvement Commission. The National Capital Commission, which reports to Parliament through the Minister of Public Works, is composed of twenty members appointed by the Governor in Council and representing each of Canada's ten provinces. It is headed by a chairman and a general manager and has a personnel of about 550, although this number fluctuates because of the seasonal character of a large part of the work involved. Six committees give advice and direction to the Commission: the *Executive Committee* consists of the chairman and vice-chairman of the Commission and three other members appointed by the Commission, one of whom is from the Province of Quebec; the *Land Committee*, composed of several experts in land evaluation, advises the Commission on matters of land purchases and property administration; the *Advisory Committee on Design*, comprising prominent Canadian architects, town planners and landscape architects, gives advice on the external appearance of government buildings, locations, site plans and landscape designs; the *Historical Advisory Committee* advises the Commission on matters of preservation, marking and interpretation of buildings and sites having historical significance within the National Capital Region; the *Information Advisory Committee* studies and considers the publicity and public relations activities of the Commission; and the *Gatineau Park Advisory Committee* looks after matters concerning the 75,000-acre Gatineau Park, wholly owned and administered by the Commission.

---

* Prepared in the Information Division, National Capital Commission, Ottawa.

The National Capital Plan, as conceived by the eminent French town planner Jacques Gréber, was dedicated to those who gave their lives for Canada during the Second World War and has since constituted the Commission's planning guide for the Capital of Canada. In accordance with the first proposal of the Master Plan, the principle of "open space" is being applied, a policy beneficial to both residents and visitors. Part of this policy involves the restoration to their natural beauty of the shores of the waterways in and around Ottawa, a program evident in the work of the Commission at Rideau Falls Park opposite the City Hall and in the development of Vincent Massey Park in the heart of the city; the latter is a 125-acre park and playground extension to Hog's Back Park at the foot of Hog's Back Falls. On the Quebec side of the Ottawa River the Commission maintains two parks—the historically interesting Brébeuf Park and Jacques Cartier Park, both on the shores of the river. Driveways and parkways in and around the Capital are also part of the open-space treatment. There are at present 40 miles of wide landscaped roadways in Ottawa and Hull, and 30 miles of right-of-way have been acquired for future expansion. The Commission cares for the landscaping of seven municipal parks, of which Strathcona Park in Sandy Hill district and Rockcliffe Park are the most extensive and attractive. The acquisition of land along both shores of the Ottawa and Rideau Rivers and the exceptionally wide rights-of-way for parkways have given to Ottawa about 4,000 acres of open space.

One of the strong recommendations of the Master Plan is that new government buildings should be dispersed from the heart of the city. This program of decentralization has been under way for some time and excellent examples of planned sites for government structures now exist at Rideau Heights, at Tunney's Pasture and at the Printing Bureau site in Hull. Other areas, such as the large tract of already serviced land at Pinecrest, are awaiting development. The advantages of decentralization are many—planned government building areas away from centre-town offer at least partial solution to the ever-pressing problem of traffic congestion and, from the humanitarian point of view, workers occupy buildings erected on large landscaped grounds with plenty of parking space and are close to main traffic arteries and shopping centres, and often to good housing developments. The grounds of more than 125 government buildings in the National Capital Region are cared for by the Commission, which also gives assistance to municipal projects that enhance the attractiveness of the area, such as the provision of land and landscaping for the 12-mile Queensway being built under a four-way partnership between the Federal Government, the National Capital Commission, the Province of Ontario and the City of Ottawa.

A main proposal of the Master Plan calls for the establishment of a greenbelt around the National Capital, one of the main objectives of which is to restrain the tentacular growth of the city so that family dwelling projects will be built on lands that can be supplied, at reasonable cost, with water and sewer services. There are also the aesthetic considerations in that this belt of green open space and planned building sites will provide the beautified Capital with suitable approaches. The present semi-circular greenbelt on the Ontario side occupies 37,000 acres of land and surrounds, to a depth of about two and one-half miles, the urban zone at an average distance of nine miles from the Peace Tower. The Commission encourages agricultural activity within this area and at the same time reserves within its boundaries certain tracts of land to be occupied by government buildings, public institutions and some types of industrial development such as research and experimentation establishments requiring considerable space to operate. By the end of March 1961, the Commission will have spent approximately $20,000,000 to purchase for the Crown about 25,000 of the planned 37,000 acres. The entire project should be completed by 1963.

A primary task of the Commission is to carry out the railway relocation program strongly advocated in the Master Plan. At the very beginning of his study of Ottawa and Hull, Jacques Gréber discovered that little could be done for the National Capital unless unsightly railway lines and adjoining roundhouses and sheds were removed from the urban areas. The Commission has begun the large-scale program of relocating trackage and yards with the co-operation of the railway companies. The abandoned rights-of-way are destined to become planned roadways which will relieve traffic bottlenecks within the heart of the city; the Queensway, now under construction, runs on a former railway bed. This program is ahead of schedule and is now expected to be complete by 1965. It involves the removal of 35 miles of track, the elimination of 70 railway crossings and the consequent acquisition of 449 acres of land for redevelopment.

The Master Plan also includes the establishment and development of the beautiful and impressive Gatineau Park, a 75,000-acre forest and lake area in the shape of a triangle stretching from its apex in the city of Hull northwestward for 35 miles into the Laurentian Hills. By the end of March 1962, the National Capital Commission will own more than 62,000 acres of the projected area. The parkways through this area now measure about 20 miles and extensions are under construction. Camping and picnic sites are being improved by the installation of drinking fountains, barbecues and outdoor ovens, and well-designed restrooms, and by the addition of fishing and swimming facilities. At Lac Philippe and Lac Lapêche, two of the four big lakes in Gatineau Park, the Commission has developed or is planning large-scale public recreation facilities with easy road access.

In addition to these major development projects, the National Capital Commission, through its Historical Advisory Committee, plans to conserve historic buildings and sites as mementoes of the past. Such sites are carefully studied and their preservation and suitable marking is an important part of the over-all program.

Planning aid to municipalities in the National Capital Region is given in the form of grants in special circumstances and advice on establishing areas of subdivision control, preparation of basic plans and maps, master plans for communities and zoning legislation. This advice is available upon request and the Commission, having no planning powers, must seek to persuade rather than impose its proposals. Its planning staff has served a score of local municipalities in this capacity with varied success, and advice to many of them is continuing.

Estimated expenditures on Commission projects for the year ending Mar. 31, 1962 total $17,810,255 which includes $2,557,470 for administration, operation and maintenance, $4,152,785 for construction, and $11,100,000 for property acquisition.

Section 3.—Wildlife Resources and Conservation

A series of special articles relating to the wildlife resources of Canada has been carried in previous editions of the Year Book. Articles on Migratory Bird Protection in Canada, Game Fish in Canada's National Parks, The Barren-Ground Caribou, Migratory Bird Legislation, Scientific Management of Game Fish in Canada's National Parks, and The Musk-ox were carried in the 1951, 1952-53, 1954, 1955, 1956 and 1957-58 editions, respectively. A short article on the fur industry appears in the 1959 edition at pp. 603-604.

The Canadian Wildlife Service.*—The Canadian Wildlife Service deals with most wildlife problems coming within the jurisdiction of the Federal Government. The Service was organized in 1947 to meet the growing need for scientific research in wildlife management and is a division of the National Parks Branch, Department of Northern Affairs and National Resources. Its functions include the administration of the Migratory Birds Convention Act in conjunction with the Royal Canadian Mounted Police and in co-operation with the provincial game authorities. It conducts scientific research into wildlife problems in the Northwest Territories, Yukon Territory, and the National Parks of Canada, advises the administrative agencies concerned on wildlife management and co-operates in the application of such advice. It provides co-ordination and advice in connection with the administration of the Game Export Act in the provinces, deals with national and international problems relating to Canada's wildlife resources, and co-operates with other agencies having similar interests and problems in Canada and elsewhere.

---

* Prepared by the Canadian Wildlife Service, Department of Northern Affairs and National Resources, Ottawa.

The Migratory Birds Convention Act was passed in 1917 to give effect to the Migratory Birds Treaty signed at Washington in 1916. It provides a measure of protection for numerous species of birds that migrate between the two countries. The Canadian Wildlife Service is the federal agency responsible for administration of the Act and for the annual revision of the Migratory Bird Regulations, which govern such matters as open seasons and other waterfowl hunting details, taking and possession of migratory birds for scientific or propagating purposes, eiderdown collecting, etc. The Royal Canadian Mounted Police is responsible for enforcing the Act and Regulations. In both administration and enforcement, provincial authorities co-operate with the Canadian Wildlife Service.

There are 98 migratory bird sanctuaries in Canada with a total area of more than 6,000 sq. miles. A sanctuary may be established on the initiative of the Department or of a provincial or municipal government, or on petition by a private person or organization. Bird banding provides valuable information on the migration of birds and their natural history and is especially useful in waterfowl management. Serially numbered bands supplied by the United States Bureau of Sport Fisheries and Wildlife are used in Canada as well as in the United States.

Investigations of barren-ground caribou in the Northwest Territories and Yukon Territory have continued since 1948. The herds that migrate into parts of the Prairie Provinces adjacent to the Territories have been the object of co-operative studies by the federal and provincial governments. These studies have designated causes for the disastrous decline in caribou numbers, with human utilization heading the list of mortality factors. Studies of fire damage to caribou winter range, and investigations of the impact of predatory animals on caribou numbers have been started recently. More conservation education is essential as is the development of more effective game law enforcement while recognizing fully the problems and needs of the people of the area.

Other recent and current projects of the Service include long-term studies of the muskrat of the Mackenzie Delta, beaver in the Mackenzie District, white fox in the Eastern Arctic and musk-oxen on the Arctic islands. The large herds of bison in Wood Buffalo National Park have been studied to determine the effects of disease on their health and growth. Biologists of the Service make detailed studies of birds and mammals in the National Parks and advise the National Parks Service, on the basis of the scientific information obtained, concerning the management of these national resources. Damage to cereal crops by wild ducks and cranes has received intensive study. Murres, sea birds of importance to many inhabitants of Newfoundland, have been investigated to determine the effects of human activity on their numbers. Much time has been devoted to other species greatly reduced in number or in danger of extinction such as Ross's geese, trumpeter swans and whooping cranes.

The present research staff includes 39 university-trained wildlife biologists stationed at various centres throughout Canada. Ornithologists are located at Vancouver, Edmonton, Saskatoon, Winnipeg, Ottawa, Maple, Ont., Quebec City, Sackville, N.B., and St. John's, Nfld. Mammalogists are stationed in the Northwest Territories at Yellowknife, Fort Smith and Aklavik, and at Edmonton and Ottawa. Two limnologists are located at

Edmonton and a range specialist and a pathologist at Edmonton and Ottawa, respectively. A number of university graduates and undergraduates are engaged annually to assist in summer field work. The Ottawa headquarters includes an administrative staff of about 30 in addition to supervisory research officers. About 25 part-time migratory bird wardens and sanctuary caretakers are employed.

PART IV.—CLIMATE AND TIME ZONES

Section 1.—Climate*

Just as there are great differences in the weather throughout Canada at any given instant, there are also many climates. These climates are not unique but are similar to those in Europe and Asia extending from the Arctic down to the mid-northern hemispheric latitudes. Because Canada is situated in the northern half of the hemisphere, most of the country loses more heat annually than it receives from the sun. The general atmospheric circulation compensates for this and at the same time produces a general movement of air from west to east. Migrant low pressure areas move across the country in this "westerly zone", producing storms and bad weather. In intervals between storms there prevails the fair weather associated with high pressure areas.

Although the movement of migrant high and low pressure systems within the zone of the westerlies is the most significant climatic control over Canada, the physical geography of North America contributes greatly to the climate. On the West Coast, the western Cordillera limits mild air from the Pacific to a narrow band along the Coast, while the prairies to the east of the mountains are dry and have extreme temperatures because they are shielded from the Pacific Ocean and are in the interior of a large land mass. In addition, the prairies are part of a wide north-south corridor open to rapid air flow from either north or south which often brings sudden and drastic weather changes to this interior area. On the other hand, the large water surfaces of Eastern Canada produce a considerable modification to the climate. In southwestern Ontario winters are milder with more snow, and in summer the cooling effect of the lakes is well illustrated by the number of resorts along their shores. On the East Coast, the Atlantic Ocean has considerable effect on the immediate coastal area where temperatures are modified and conditions made more humid when the winds blow inland from the ocean. The following paragraphs describe the climate of Canada by region.

The *Arctic* climatic region takes in the Arctic islands and that part of the Arctic Coast north of the tree line. This line corresponds in general to the position of the 50°F. isotherm in the warmest month of summer. In the Arctic there is no summer as that season is known in southern Canada, since July temperatures average lower than 50°F. Winters are long and severe with January temperatures averaging in the neighbourhood of −20°F. Along the coastal areas of the Arctic islands, temperature extremes over the year may vary from about 65°F. in summer to −65°F. in winter. Snowfall is relatively light but snow on the ground drifts and blows to an extent unknown in southern Canada.

The *Northern* climatic area extends in a broad band from the Yukon Territory in the west to Labrador in the east and from the tree line southward to the more settled portions of southern Canada. Thus, this region includes both the lightly treed barren lands in the north and the heavily timbered Boreal Forest Region in the south. Average temperatures in January are in the neighbourhood of −10°F. and in July range from 50°F. to 60°F. Rainfall and snowfall (especially snowfall) are abundant in the eastern portions but deficient in the northwestern section.

---

* Prepared by the Meteorological Branch of the Department of Transport, Toronto. A comprehensive study on The Climate of Canada, also prepared by the Meteorological Branch, was carried in the 1959 Year Book, pp. 23-51. Supplementing that textual material, detailed tabulations of climatic factors for 45 individual meteorological stations across the country were carried in the 1960 Year Book, pp. 33-77. A reprint is available from the above source giving the complete textual and tabular data.

The *Pacific* climatic region embraces the islands and a narrow coastal belt of British Columbia, nowhere extending more than 100 miles, and frequently only a few miles, inland. This is the only portion of Canada where January average temperatures are above 32°F. Temperatures rarely drop below zero in winter or rise above 90°F. in summer and the average temperature in July is between 55°F. and 60°F. This is the area of heaviest rainfall in Canada, annual averages of more than 80 inches being common along the coast. There are, however, rain shadow areas in the lee of the mountains where the annual precipitation is less than 30 inches.

The most complex climatic region of Canada is the *Cordillera* which extends in a northwest-south belt through British Columbia and the Yukon Territory. In general, precipitation decreases eastward from the coast and, in contrast, temperature ranges decrease westward from the interior of the Continent. In this region, diurnal temperature variations are greater than anywhere else in Canada and, as a rule, altitude is more a climatic determinant than latitude.

The *Prairie* climatic region of interior Canada takes in most of the settled agricultural land of Manitoba, Saskatchewan and Alberta. Precipitation averages from 12 to 20 inches, with an early-summer maximum. July temperatures average in the neighbourhood of 65°F., although there have been extremes recorded as high as 115°F.; January temperatures average about 5°F., with observed extremes of −50°F. and −60°F. The Prairie region is well known for two wintertime weather phenomena—the blizzard and the chinook. Bitterly cold temperatures with high winds and driving snow combine to produce the blizzard, while the chinook is a warm air invasion, usually in Alberta, bringing temperature increases of 40°F. to 50°F. within a few hours.

The sixth general climatic region, called the *Southeastern* region, takes in southern Ontario, southern Quebec and the four Atlantic Provinces. Precipitation in this area is usually ample and ranges from 30 inches in northern Ontario to 50 inches in coastal Nova Scotia and Newfoundland. Snowfall is also abundant in winter, there being little seasonal variation in precipitation. July temperatures average between 65°F. and 70°F. and January temperatures from 10°F. to 25°F. Climatic conditions in general are modified in southwestern Ontario by the Great Lakes and those along the coastal areas by the Gulf of St. Lawrence and the Atlantic Ocean. In southern Ontario high sensible humidity or sultry conditions are felt more often than anywhere else in Canada but these spells usually last only a few days at a time.

The following table gives temperature and precipitation data for typical stations in the various regions of Canada. Temperatures in this table refer to observations taken in a thermometer shelter which has been placed in a representative location with the thermometer bulbs four feet above the surface of the ground. Mean January and July temperature data are based on records over the 30-year period from 1921 to 1950 except for far northern stations where the available period of record is shorter. After an average temperature is obtained for each day in January over a 30-year period, the mean January temperature may be arrived at by striking a mean of these 930 daily values. The mean July temperatures may be obtained in a similar manner. The highest and lowest temperatures on record refer to the absolute extremes for the entire period of record at each station. Average dates are shown for the last occurrence in spring of a temperature of 32°F. or lower and for the first occurrence in autumn of freezing temperatures at the four-foot level in the thermometer shelter.

The official Canadian rain gauge is a small cylinder in which the rain is caught and then measured to one-hundredth of an inch with a simple measuring device. Freshly fallen snow is measured as it lies on the ground and recorded to the tenth of an inch. Total precipitation values as shown in the table are the sum of the total rainfall and one-tenth of the total snowfall. This assumes a specific gravity of 0.1 for freshly fallen snow. For the purposes of this table, a day with precipitation is one on which at least one-hundredth of an inch of rain or one-tenth of an inch of snow has fallen.

---

[1] Total rainfall and one-tenth of the total snowfall.

[2] No appreciable period free from frost.

Section 2.—Meteorological Observing Stations in Canada*

In 1960, official meteorological observations were taken and recorded at some 1,903 weather reporting stations in Canada. There are several different classes of stations, ranging from the first-order reporting stations at airports where hourly observations of all aspects of the weather are recorded, to the co-operative precipitation observing stations where a volunteer observer makes daily observations of rainfall and snowfall.

The official recording of weather observations in Canada began early in 1840. Although there were some scattered weather records prior to that date, it was at the Toronto Observatory, established by the British Government, that the first scientifically precise Canadian weather observations were recorded. Several additional observing stations were established in the 1860's after control of meteorological work had passed into local government hands and a national meteorological service was organized in 1871. By 1876 there were more than 100 stations, 15 of them reporting daily by telegraph to Toronto for forecasting purposes.

Since then, the number of meteorological observing stations has grown steadily. As the mid-west opened up around the turn of the century, observing stations were established in that area, and during the past three decades in the sub-Arctic and Arctic regions. At the same time, the coverage has improved in the older settled portions of southeastern Canada. While there are vast areas of Canada where the weather stations are several hundred miles apart, most of the settled parts of the country are represented by first-order hourly reporting stations every 100 miles or so, and by co-operative climatological observing stations at least every 25 miles.

Of the 1,903 weather reporting stations across Canada, about 286 are classified as first-order synoptic stations. At most of these stations complete weather observations are made every six hours and at a large percentage of them only slightly less complete observations for aviation forecasts are made every hour. These weather data, including information on temperature, precipitation, pressure, wind, humidity, cloud and visibility, are sent first by radio and teletype to the different weather offices across the Continent to be used for weather forecasting purposes, and then at each month-end the manuscript reports are dispatched by mail to Meteorological Headquarters for use in compiling climatic statistics. At some 90 of these observing stations, personnel of the Telecommunications Branch of the Department of Transport take weather observations as part of their scheduled duties, and 35 stations are operated in a similar manner by the different Armed Services; 70 stations are operated by Meteorological Branch personnel and the remainder are operated under contract, mainly by various transportation and communications companies.

Twice daily at 34 locations throughout the country, complete upper air observations are made from the surface to altitudes upwards to 100,000 feet. Pressure, temperature and humidity measurements are determined by radiosonde instruments carried aloft by balloons and the information reported by radio to the ground receiving station; winds are determined by observing the drift of the balloon by means of radar or radio direction finding ground equipment. There are also 38 other locations where the winds in the lower layers of the atmosphere are determined by observing free balloon drift by means of a theodolite or by radar. As in the case of the first-order synoptic reporting stations, these upper air weather observations are made available immediately to forecast offices for weather forecasting purposes, and the manuscript reports are collected at Meteorological Branch Headquarters for compilation of climatic statistics.

About 1,040 weather observing stations in Canada are classified as climatological stations where the observers record temperature extremes and precipitation once or twice daily and send in monthly data sheets. Most of these observers serve on a voluntary basis and willingly spend several hours a month on their hobby. They come from all walks of life—farmers, business men, clergymen, retired people, etc. In addition, many governmental and industrial organizations such as agricultural experimental farms and power companies have incorporated brief climatological duties into the general work of some of their employees. These climatological stations have contributed much useful information on temperature and precipitation for publication by the Meteorological Branch.

---

* Prepared by the Meteorological Branch, Department of Transport, Toronto.

There are about 560 stations classified as precipitation stations where rainfall and snowfall only are observed and recorded. Since precipitation varies more rapidly than temperature over short distances, a dense network of these stations is required, especially in large urban areas. Finally, there are about 15 miscellaneous stations where observations of wind, sunshine and temperature are taken for special purposes. In all, the total number of weather stations in Canada has been growing at a rate of more than 50 a year for the past decade and thus a steadily increasing climatic intelligence is assisting Canadians in all economic pursuits.

Section 3.—Standard Time and Time Zones

Standard time, which was adopted at a World Conference held at Washington, D.C., in 1884, sets the number of time zones in the world at 24, each zone extending over one twenty-fourth of the surface of the earth and including all the territory between two meridians 15° longitude apart. The basis of world time is Greenwich time and all other time zones are a definite number of hours behind Greenwich.

Canada has seven time zones, the most easterly being Newfoundland standard time, three hours and thirty minutes behind Greenwich time. In the west, Pacific standard time, used throughout British Columbia and part of the Northwest Territories, is eight hours behind Greenwich, and Yukon standard time, used throughout the Yukon Territory, is nine hours behind Greenwich. Some municipalities adopt the time used by the local railways which, in certain cases, differs from the standard. There are also villages that adopt such time as seems best to suit their convenience but in general the legal boundaries of the different time zones are actually in use.

Daylight Saving Time.—For some years before World War I there was active propaganda, particularly in the cities, for the use during the summer months of an earlier time usually referred to as 'daylight saving time', one hour ahead of standard time. It was considered from the economic as well as from the health point of view that people in industrial towns and cities would gain by having longer periods of sunlight at their disposal for recreation. Canada adopted daylight saving time in 1918 but the Canadian Act lapsed at the end of that year. Since that date, however, most cities and towns have adopted daylight saving for varying periods in the summer months.

Legal Authority for the Time Zones.—Most of the regulations made in Canada concerning standard time have been passed by the provincial legislatures and the Northwest Territories Council. Legislation, besides determining the boundaries of zones, regulates such matters as the times of coming into effect or expiration of Acts, ordinances, contracts and agreements, times of opening and closing registration offices, law courts, post offices and other public offices, times of open or close seasons for hunting and fishing, and times of opening and closing business houses and places of amusement.

PART V.—GEOPHYSICS AND ASTRONOMY

Section 1.—Geophysics*

The study of the earth is divided between two branches of science—geology and geophysics. Geology is concerned with the observation and description of those rocks which form the surface of the earth, leaving to geophysics all investigations of the atmosphere and near-by space, the oceans, fresh waters, snow and ice, the earth's interior, its magnetic and gravitational fields and several studies of rocks which involve physical measurements, including the direction of their remanent magnetism, and measurements of the age of radioactive minerals.

The word geophysics first appeared at the end of the nineteenth century, but its development goes back to the time when primitive men first began to study the changes of the weather and the seas. In the second century A.D. the Chinese invented the magnetic compass and the first instruments to record earthquakes. Since 1920 its scope and applications have increased very rapidly and the science has received world-wide publicity as a result of the International Geophysical Year, 1957-58, in which Canada participated along with 66 other countries.

The chief branches of geophysics that are internationally recognized are seismology and the study of the earth's interior, meteorology, geomagnetism and aeronomy, physical oceanography, hydrology and volcanology. Lesser divisions include geochronology and tectonophysics.

In industry, petroleum and mining companies use electrical, gravitational, magnetic, radioactive and seismic methods of prospecting to direct drilling for deposits. Engineers use the same methods to investigate construction sites.

In the Federal Government, the Dominion Observatory, the Geological Survey of Canada and several other branches of the Department of Mines and Technical Surveys carry out extensive programs of geophysical investigation. So does the Meteorological Service of the Department of Transport. Geophysical work by provincial governments has chiefly consisted of the preparation of aeromagnetic maps to assist prospecting.

In Canadian universities geophysics has been taught at McGill and Toronto for the past 35 years, and since 1945 most of the other larger universities have started to give courses. There are Institutes of Oceanography at British Columbia and Dalhousie. Graduate courses in meteorology are given at Toronto and McGill. There are two geophysical institutes at the University of Toronto. Canada has been a member of the International Union of Geodesy and Geophysics since its inception in 1919.

Further information on this subject may be secured from the Secretary of the National Committee for Canada (NRC Associate Committee on Geodesy and Geophysics), National Research Council, Ottawa.

---

* Prepared by Dr. J. T. Wilson, Physics Department, University of Toronto.

Section 2.—Astronomy

The modern era of astronomy in Canada may be said to have begun in 1905 with the completion of the Dominion Observatory at Ottawa, the national observatory of Canada. Prior to that time, an astronomical observatory established in 1851 at Fredericton, N.B., was used for a short time to determine the longitude of that centre and for general astronomical purposes; it has been rehabilitated as a historic monument. Other small observatories were established, one at Quebec City in 1854 and one at Kingston in 1875. Astronomical instruments were to be associated with the Magnetic Observatory built by the British Government at Toronto in 1839 but there is no record of their being set up until 1881. A small observatory established at McGill University in 1879 was used for many years for time observations.

Today, an increasing number of universities and other scientific organizations are devoting a substantial part of their efforts to the study of astronomy and astrophysics. The Dominion Observatory at Ottawa which, with its sister institutions, is administered by the Department of Mines and Technical Surveys, specializes in the astronomy of position, solar physics, meteoric astronomy and various branches of Geophysical work. This Observatory also maintains a subsidiary (the Dominion Radio Astrophysical Observatory) near Penticton, B.C., for the study of Radio Astronomy. Also associated in the same group is the Dominion Astrophysical Observatory in Victoria, B.C., which devotes its efforts to the motions and physical characteristics of the stars and of inter-stellar material. Other Federal Government institutions carrying out meteoric and radio astronomy, including a study of the upper atmosphere by essentially astronomical methods, are the National Research Council and the Defence Research Board.

The David Dunlap Observatory of the University of Toronto carries on an active program of astrophysical research as well as the teaching of astronomy. It performs not only the functions of a privately financed and administered research institution, but is also the nucleus of the Department of Astronomy of the University of Toronto. The Physics Department of Queen's University in Kingston, which devotes considerable effort to the teaching of astronomy, has recently installed a new optical telescope and has for some time been carrying on advanced work in the science of radio astronomy. The University of Western Ontario maintains a small but active Department of Astronomy and several other Canadian universities give some instruction in astronomical science.

PART I.—CONSTITUTION OF CANADA

The Canadian federal state, which today comprises ten provinces and two vast northern territories, had its beginning ninety-four years ago in the enactment (Mar. 29, 1867) by the Parliament of the United Kingdom of the British North America Act, 1867. Fashioned largely out of the Seventy-two Resolutions drafted at Quebec (1864) by the Fathers of Confederation, the British North America Act, 1867 provided for the federal union of the three British North American provinces (Canada, New Brunswick and Nova Scotia) in one Dominion under the name of "Canada".

While the new nation that came into being on July 1, 1867 was a federation comprised of four provinces, namely, Ontario, Quebec, New Brunswick and Nova Scotia, Sect. 146 of the Act provided for the admission into the Union of the Crown colonies of Prince Edward Island and Newfoundland on the Atlantic and the united (1866) island and mainland colony of British Columbia on the Pacific, and also of the vast expanse of Hudson's Bay Company territory in the North West known as "Rupert's Land and the North-Western Territory". Following the negotiation of an agreement on terms comprising the Company's surrender of its authority and territories to the Crown (which was to transfer them at once to Canada) and the retention of one-twentieth of the land of the fertile belt (the southern territories) with designated blocks of land around its trading posts and a Canadian cash payment of £300,000, the new nation of Canada was ready to expand westward with unmatched momentum across the Continent to the Pacific.

1.—Provinces and Territories of Canada, Dates of Admission to Confederation, Legislative Processes by which Admission was Effected, Present Area and Seat of Government

Keewatin[6]	Jan. 1, 1920		*228,160*	
Franklin[6]	Jan. 1, 1920		*549,253*	
Yukon Territory[8]	June 13, 1898	Yukon Territory Act, 1898 (SC 1898, c. 6)	207,076	Whitehorse
		Canada	**3,851,809**	

[1] The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (SC 1912, c. 40).

[2] Extended by Quebec Boundaries Extension Act, 1912 (SC 1912, c. 45) and diminished Mar. 1, 1927 in consequence of the Award of the Judicial Committee of the British Privy Council whereby approximately 112,000 sq. miles of territory (formerly considered as part of Quebec) was assigned to Newfoundland.

[3] Extended by the Extension of Boundaries Act of Manitoba, 1881 and the Manitoba Boundaries Extension Act, 1912 (SC 1912, c. 32).

[4] Saskatchewan and Alberta created as provinces in 1905 from the area formerly comprised in the provisional districts of Assiniboia, Athabaska, Alberta and Saskatchewan established May 17, 1882 by minute of Canadian Privy Council concurred in by Dominion Parliament and Order in Council, Oct. 2, 1895.

[5] By an Imperial Order in Council passed on June 23, 1870 pursuant to the Rupert's Land Act, 1868 (U.K. Stat. 1868, c. 105), the former territories of the Hudson's Bay Company known as Rupert's Land and the North-Western Territory were transferred to Canada effective July 15, 1870. These territories were designated as the North-West Territories by the Act of SC 1869, c. 3 and as the Northwest Territories by RSC 1906, c. 62. By Imperial Order in Council of July 31, 1880 (effective Sept. 1, 1880), all British territories and possessions in North America not already included within Canada and all islands adjacent thereto (with the exception of the Colony of Newfoundland and its dependencies) were annexed to Canada and these additional territories were formally included in the North-West Territories by SC 1905, c. 27. The Province of Manitoba was formed out of a portion of the territories by the Manitoba Act, 1870 (SC 1870, c. 3) and a further portion was added to Manitoba in 1881 by SC 1881, c. 14. The Provinces of Alberta and Saskatchewan were formed out of portions of the territories in 1905 and in 1912 other portions were added to Manitoba, Ontario and Quebec.

[6] By SC 1876, c. 21, a separate district to be known as the District of Keewatin was established and provision was made for the local government thereof. The Act was expressed to come into force by proclamation. It provided that portions of the District might be re-annexed to the North-West Territories by proclamation; in 1886 a portion of the District of Keewatin was re-annexed and in 1905 the entire Keewatin District was re-annexed. The Act of 1876 was never proclaimed. By Order in Council of May 8, 1882 the provisional districts of Assiniboia, Saskatchewan, Alberta and Athabaska were created for the convenience of settlers and for postal purposes. By Order in Council of Oct. 2, 1895 the further provisional districts of Ungava, Franklin, Mackenzie and Yukon were created. The boundaries of these provisional districts were re-defined by Order in Council of Dec. 18, 1897. Subsequently the Yukon Territory was formed, the Provinces of Alberta and Saskatchewan were created and other portions of the territories were annexed to Quebec, Ontario and Manitoba. By Order in Council dated Mar. 16, 1918 (effective Jan. 1, 1920) the remaining portions of the Northwest Territories were divided into three provisional districts known as Mackenzie, Keewatin and Franklin.

[7] See p. 90.

[8] The provisional district of Yukon established in 1895 was created a judicial district of the North-West Territories by proclamation issued pursuant to Sect. 51 of the North-West Territories Act (RSC 1886, c. 50) on Aug. 16, 1897 and by the Yukon Territory Act (SC 1898, c. 6) was declared to be a separate Territory.

POLITICAL EVOLUTION OF CANADA SINCE CONFEDERATION IN 1867

By 1925 Canada extended to the North Pole; in 1927 the Imperial Privy Council rendered a decision on the boundary between Newfoundland and Canada; and in 1949 Newfoundland was admitted to Confederation as Canada's tenth province.

PRODUCED FOR THE *CANADA YEAR BOOK 1961* BY THE SURVEYS AND MAPPING BRANCH, DEPARTMENT OF MINES AND TECHNICAL SURVEYS, OTTAWA.

The acquisition by Canada of Rupert's Land and the North-Western Territory enabled the Red River settlement, after a few months of disturbance, to receive limited provincial establishment under the name of "Manitoba" in 1870; provided the Federal Government with the public lands needed to help subsidize a transcontinental railway linking the Pacific with the Canadian East, thereby fulfilling the pledge to British Columbia to begin the Canadian Pacific Railway within two years and to complete it within ten years of the date of union, July 1, 1871; and laid, through the provision of millions of acres of public lands, the land and economic bases for the Federal Government's adoption of a free-homestead policy for the Canadian prairies that, in conjunction with the completion of the Canadian Pacific Railway and the launching of other railway lines, brought wave after wave of settlers into the Northwest Territories in such numbers as to justify the creation of the two Provinces of Saskatchewan and Alberta in 1905 out of the portion of the Northwest Territories south of the 60th parallel of north latitude. Although provision for their entry was included in the British North America Act, 1867, the Province of Prince Edward Island held back from the Union until 1873 and Newfoundland became Canada's tenth province on Mar. 31, 1949.

AMENDMENT OF THE CANADIAN CONSTITUTION*

The Constitution Defined

A constitution sets out the rules determining the creation and operation of the institutions of government. The Constitution of Canada has grown out of the British Constitution and both are the product of evolution rather than revolution. They are the consequence of prolonged and almost casual historical growth, rather than a carefully reasoned set of principles worked out at any one point of time. For this reason the Constitution has a number of sources, including Royal Letters Patent, despatches and instructions from the British Government to colonial governors, and Acts of the British and Canadian Parliaments. These elements have never been consolidated and fused together into a single basic document, with its own special rules of interpretation and amendment. Since the Statute of Westminster, 1931, Canadian legislatures are no longer subordinate to the British Parliament, and resolutions passed at Imperial Conferences in 1926 and 1930 made the Canadian Cabinet the sole advisers of the Sovereign on Canadian affairs, no longer subordinate in any way to the British Government. However, most of the basic provisions of the Canadian Constitution are contained in the British North America Act, passed by the British Parliament in 1867 to give effect to a federal union of the original provinces. This Act therefore contains most of the important parts of Canada's Constitution, which is why the British North America Act, with its various amendments, is normally thought of as the Canadian Constitution.

For reasons noted below, Canada still lacks the power directly to amend the British North America Act in certain important particulars. The question of transferring this amending power to wholly Canadian hands has been the subject of discussion and negotiation in Canada for over thirty years. In this time the British Government has been willing to agree to the transfer—the difficulty has stemmed from securing agreement in Canada on the form of amending procedure.

Associated with the setting up of a Canadian amending process has been a separate issue—the 'repatriation' or 'domiciling' of the Constitution in Canada. Already certain parts of the Constitution are based on Canadian instruments, the most important of which are the regulations governing the powers of the Head of State. In so far as the Governor General is concerned, his powers are now governed by the Letters Patent of 1947, a wholly Canadian instrument issued by the King on the advice of Canadian Ministers and under the Great Seal of Canada. Certain other aspects of royal powers are governed by a Canadian statute—the Seals Act, 1939. Many other important parts of Canada's Constitution are also found in Canadian statutes, such as the Supreme Court Act, 1949.

THE AMENDING POWER IN 1867

Historically, it was assumed that colonial legislatures such as those of the early American colonies had the inherent right to amend their own constitutions in the same way as Parliament. However, these early colonies had been given constitutions by various kinds of royal grant, but in the case of colonies whose constitutions were provided by the Parliament of the United Kingdom it was assumed that the right of amendment still rested in Parliament unless expressly conferred. Since the constitution of the two Canadian provinces (now Ontario and Quebec) had been provided by the Quebec Act (1774), the Canada Constitution Act (1791) and the Act of Union (1840), it could be amended only by Imperial statute, such as the Act of 1854 which provided for the election of the Legislative Council. Thus, unless some amending procedure was provided in the British North America Act in 1867, the amending power would be deemed to remain in the British Parliament.*

Very little consideration seems to have been given to this question in the Confederation Debates in the Canadian Parliament in 1865, and the matter is not referred to at all in the Quebec resolutions except indirectly where the general power of the central parliament to legislate for the "peace, welfare, and good Government" is qualified by the saving clause "saving the Sovereignty of England". In the London Resolutions, which were the final basis of the British North America Act, a power to amend their own constitutions was provided for the provinces but not for the central legislature nor for the federation scheme as a whole. The most explicit reference to the question is the statement of D'Arcy McGee, "we go to the Imperial Government, the common arbiter of us all, in our true Federal metropolis—we go there to ask for our fundamental Charter. We hope, by having that Charter that can only be amended by the authority that made it, that we will lay the basis of permanency for our future government."† It may well have been that the question of an amending procedure was deliberately set aside because it could have added a further difficulty to the number of complex questions which had to be settled if the Union was to be achieved. Furthermore, it has been suggested that "the Imperial authority was . . . considered as the ultimate safeguard of the rights granted to the provinces and to minorities by the constitution".‡

However that may be, the role of the United Kingdom Government and Parliament as an external balancer in the Canadian Constitution has been fundamentally altered by the change in the constitutional relations of Canada and the United Kingdom since 1926. In that year, an Imperial Conference declared that the United Kingdom and the self-governing dominions were "autonomous communities within the British Empire, equal in status, in no way subordinate to one another in any aspect of their domestic or external affairs". Subsequently, by the Statute of Westminster, 1931, the dominions were brought into full equality with the United Kingdom by the removal of all restrictions on their legislative jurisdiction.

The Statute of Westminster did contain one important saving clause in relation to Canada. Its liberating provisions did not apply to the British North America Act and its amendments. The reason for this was simple. Had the Statute of Westminster been applied without reservation to Canada its effect would have been to enable the Parliament of Canada to amend the British North America Act. There was objection in Canada to denying to the provinces the right to be consulted about or to participate in the amending procedure. Accordingly, it was necessary to exclude the British North America Act from the operation of the Statute of Westminster, on the assumption that agreement would have to be reached later on an amending procedure which contained appropriate safeguards to the position of the provinces. Sect. 7 of the Statute of Westminster repealed the Colonial Laws Validity Act, 1865, under which laws were invalid if they were repugnant to British statutes that had effect in Canada. This repeal extended only to legislation enacted by the Federal Parliament and the provincial legislatures in the spheres assigned to them by the British North America Act. The repugnancy rule still applied to the British North America Acts, 1867 to 1930. That is, no Canadian legislature could either amend them or pass legislation inconsistent with them, except as provided by the British North America Acts themselves.

‡ Paul Gerin-Lajoie *Constitutional Amendment in Canada* (Toronto, 1950) 38.

The restriction on the right to amend the Canadian Constitution in Canada, as continued by the Statute of Westminster, was in part removed by the British North America (No. 2) Act, 1949. This Act inserted a new Subsect. (1) into Sect. 91, which conferred on the Parliament of Canada the power to amend the British North America Act except in respect of provincial and educational rights safeguarded in the Constitution, and the rights to the use of the French and English languages. It also provided a special procedure for amendments that would either modify the provision for the annual meeting of Parliament or extend the life of a Parliament beyond the five-year maximum laid down in the British North America Act.

FORMAL AMENDMENTS TO THE BRITISH NORTH AMERICA ACT—INITIATING PROCEDURES

While the United Kingdom Parliament was the sole authority for amending the British North America Act, it was long recognized that the initiative for such changes should come from Canada. The requests for a few of the earlier amendments came from the Canadian Government but the practice soon became established that this should not be done without prior consent of the Canadian Parliament. A resolution carried in the House of Commons by 137 to none in 1871 asserted that "no changes in the provisions of the British North America Act should be sought by the Executive Government, without the previous assent of the Parliament of this Dominion". The proper form of initiating an amendment has thus become an Address from both Houses of Parliament to the Sovereign, praying that an amendment be laid before the United Kingdom Parliament. It is now customary to append to this Address a draft bill embodying the proposed amendment. The agreement of both Houses, of course, gives the Senate the right to veto or modify an amendment initiated in the Commons—the Senate was able to secure modifications of proposed amendments in 1915 dealing with parliamentary representation, and in 1960 dealing with the retirement of judges. The Senate also refused to concur in a requested amendment of 1936 which would have limited the rights of provinces to borrow money and clarified the distribution of taxing power under the Constitution.

Since the procedure antecedent to the presentation of an amending Bill is not governed by statutory requirements, the degree of consultation of affected interests is governed only by convenience and practice. The provinces have no legal right to be consulted on constitutional amendments, and have no *locus standi* with the British Government or Parliament either to promote or oppose an amendment. However, in matters affecting the legislative powers of the provinces, they are invariably consulted and their agreement obtained before an Address to the Sovereign is presented from Parliament.

AMENDMENTS TO THE BRITISH NORTH AMERICA ACT—THE PRESENT POSITION

At present there are three quite separate procedures for amending different parts of the British North America Act. Only one of these methods is still a subject of difficulty—that which applies to what are called the 'safeguarded' parts of the Act. This is the method yet to be 'repatriated' to Canada and replaced by an agreed procedure which satisfies the need to entrench basic provincial and minority rights and has sufficient flexibility to ensure that the Constitution can be changed to meet changing circumstances. The present methods of amendment are as follows.

1. *Amendment of 'Safeguarded' Parts of the Act.*—These parts of the British North America Act must still be amended by the United Kingdom Parliament. An amendment is initiated by an Address of both Houses of the Canadian Parliament to the Sovereign, praying that a proposed amendment may be laid before the Parliament of the United Kingdom. It is established practice to consult the provinces before seeking such amendments, and to secure the agreement of all provincial governments to the terms of the proposal. However, the consent of the provincial legislatures does not seem normally to

have been sought. A provincial government which sought to block an amendment on the ground that it had not been consulted would lack any effective procedure for doing so, since it would have no direct access to either the Government or Parliament of the United Kingdom. There is uncertainty as to the full extent of the parts of the British North America Act which must be amended in this way, but it is certain that this procedure extends to Sects. 92 (exclusive powers of provincial legislatures); 93 (provincial jurisdiction over education and educational rights of certain minorities); 94 (uniformity of provincial laws); 94A (old age pensions); 95 (concurrent jurisdiction in agriculture and immigration); 97-98-99 (selection and tenure of judges of provincial courts); and an uncertain number of other sections dealing with such matters as freedom of trade within the union (Sect. 121).

2. *Amendment of Provincial Constitutions by Provincial Legislatures.*—Part V of the British North America Act (Sects. 58-90) and a number of the Miscellaneous Provisions deal with provincial constitutions (mostly with respect to Ontario and Quebec which were created *de novo* in 1867 out of the United Province of Canada). Sect. 92 (1) gives to the provincial legislatures the exclusive power to amend their own constitutions "except as regards the office of Lieutenant-Governor". The amending power is thus vested in the legislature of the province and changes have been made in provincial constitutions by ordinary statutory enactments. Thus, for example, Ontario and Quebec have altered the compositions of their legislatures and their Executive Councils, both of which were provided for in the British North America Act. New Brunswick and Nova Scotia have abolished the upper chamber in their legislatures. All provinces have made numerous changes in their machinery of government which might be classed as constitutional amendments.

3. *Amendment by the Parliament of Canada.*—The British North America Act provided in 1867 that certain of its provisions could be modified, repealed or extended by the Parliament of Canada. This power was considerably extended by the British North America (No. 2) Act, 1949, which added to the powers of the Parliament of Canada a general power to amend "the Constitution of Canada", except as regards the exclusive legislative powers of the provinces, exclusive rights or privileges granted to the provinces, the rights of certain minorities with regard to schools, and rights to the use of the English or French languages. At the same time, the power to extend the life of parliament or to modify the provision for annual parliaments could be exercised only in emergencies and provided that it was not opposed by at least one-third of the members of the House of Commons. Since 1949, by virtue of this power, Parliament has made modifications in the provisions in the British North America Act for the decennial redistribution of seats in the House of Commons.

ATTEMPTS TO DEVISE AMENDING PROCEDURES

A number of proposals for a suitable amending procedure were laid before a Select Committee of the House of Commons which considered the matter in 1935, and in December 1935 a Dominion-Provincial Conference met at Ottawa to consider, *inter alia*, the procedure for amending the British North America Act. This matter was dealt with in a sub-conference of federal and provincial attorneys general, which group agreed that the power to amend the Canadian Constitution should be vested in Canada "provided that a method of procedure therefore satisfactory to the Dominion Parliament and to the provincial legislatures be devised". Preparation of such a method was left to a sub-committee. After various discussions, the following proposal emerged in the sub-committee in 1936: (*a*) that an amendment be sought to the Statute of Westminster replacing Sect. 7 of that Act by a new one removing the exemption of the British North America Acts from the operation of the Statute; (*b*) a power to enact a consolidated constitution and a new amending clause be conferred on the Parliament of Canada. The Constitution was to be divided into four parts and amendment of each part could be initiated in the House of Commons on the recommendation of the Governor General. Should the Senate fail to concur in a proposed amendment, a joint sitting should be held during the same session to decide the issue. Where provincial concurrence was required, failure to take any action at all by a provincial legislature would be considered to be approval. Subject to these general rules, parts of the Constitution referring only to the central government machinery and having no relation to the federal character of the country should be amended by action of the Federal Parliament alone. In matters of exclusive provincial concern and in matters of mutual concern to provincial and federal levels of government, there should be joint action of the Federal Parliament and of the legislatures of two-thirds of the provinces representing at least 55 p.c. of the population. There were included amendments relating to the composition of the Senate and to the distribution of legislative power, excepting items 12 and 14 of Sect. 92. Difficulty was experienced in dealing with items 13 and 16, but a suggested compromise was that where an amendment relating to them was carried by the two-thirds and 55 p.c. rule it would still be possible for a dissenting province to continue to enjoy exclusive jurisdiction over the matter dealt with in the amendment. Finally, there were entrenched sections that could be amended only by unanimous agreement—parliamentary representation, solemnization of marriage, administration of justice, provincial courts and civil procedure, education, and the use of the English and French languages.

One province dissented from these proposals and they were never proceeded with. They represented the closest that Canada had ever come to an agreed amending procedure. The sub-conference did not meet again, and the general question of amending procedure was not revived until 1950.

In that year a conference of the federal and provincial governments met in January and re-convened in September of the same year. A committee of attorneys-general agreed on the following report.

"Your committee recommends the following resolutions:—

1. That the provisions of the British North America Acts, 1867-1949 and other constitutional Acts be grouped under six heads, namely:—

(1) Provisions which concern parliament only.
(2) Provisions which concern the provincial legislatures only.
(3) Provisions which concern parliament and one or more but not all of the provincial legislatures.
(4) Provisions which concern parliament and all of the provincial legislatures.
(5) Provisions concerning fundamental rights (as for instance but without restriction, education, language, solemnization of marriage, administration of justice, provincial property in lands, mines and other natural resources) and the amendment of the amending procedures.
(6) Provisions which should be repealed.

2. That in respect of group (1) amendment shall be made by an Act of the Parliament of Canada.

3. That in respect of group (2) amendment shall be made by Acts of the provincial legislatures.

4. That in respect of group (3) provision be made for amendment by an Act of the Parliament of Canada and an Act of the legislatures of each of the provinces affected.

5. That in respect of group (4) provision be made for amendment by an Act of the Parliament of Canada and Acts of such majority of the legislatures and upon such additional conditions, if any, as may be decided upon.

6. That in respect of group (5) provision be made for amendment by an Act of the Parliament of Canada and Acts of the legislatures of all the provinces.

7. It is recommended that the process of amendment in respect of categories (3) to (6) inclusive of paragraph 1 be capable of being initiated by one or more of the provincial legislatures or by the Parliament of Canada.

8. In the opinion of this committee, the subject of delegation of powers should be placed upon the agenda."*

It will be seen at once that greater degree of unanimity gained over that obtained in 1935 had been obtained at a price—a more complex procedure with a greater degree of rigidity. It further became apparent, when the Conference remitted to a continuing committee of attorneys-general the task of fitting the detailed sections of the Constitution into the six pigeon-holes provided, that there were still wide differences on major matters of principle. No substantial progress was therefore made until the question was again taken up in 1960.

---

* See Canada Year Book 1951, pp. 103-105.

Several reasons may be suggested for the failure to achieve concrete results—particularly after the apparent agreement on a general formula in 1950. In the first place the unilateral action of the Federal Government in obtaining the new amending procedure in 1949—before the federal-provincial conference was due to meet—did not improve the prospects of agreement with the provinces. Secondly, several provincial governments were not anxious to rush into a new amending procedure, preferring the certainty of what they knew to the uncertainty of the unknown. An amending procedure that made the Constitution much more rigid would be worse than the present one. Finally, it should be noted that the urgent need for constitutional amendment was not felt so acutely in the 1950's. The discussion of the amending procedure in the 1930's arose out of a desperate anxiety to adapt the machinery of government to meet the challenge of a national disaster at a time when it seemed the Constitution itself made effective remedial action ineffective. In the postwar period this sense of urgency was lost because the fiscal and monetary techniques developed during the War, together with the wide powers of the central government over defence, seemed adequate for effective national government without any constitutional change.

The only remaining reason for a change in the amending procedure was the question of prestige and constitutional tidiness. It has become increasingly difficult to explain—either to Canadians or to foreigners—why the constitution of an independent State still must be returned to the Parliament of another country—like a rented suit to the tailors—whenever alterations in it are required.

In any event, the question was revived at the federal-provincial conference held in November 1960. Indication was given that progress might be more rapid if the two stages of the problem were dealt with separately, i.e., that steps be taken to 'domicile' the Constitution first, and that agreement be reached later on the details of the amending procedure. It would seem, however, that the two are inseparable and that nothing can be gained by re-enacting the Constitution in Canada if the Constitution does not have some machinery for its own amendment. The outstanding legal problems under discussion at that time were as follows.

1. *The Techniques of Repatriation.*—It would not suffice simply to re-enact the British North America Act as a Canadian statute, because this is the one British statute which the Parliament of Canada cannot (except as described above) alter directly. A necessary first step would be to seek an amendment to Sect. 7 of the Statute of Westminster, before arranging for the repeal of the British North America Acts by the British Parliament and an enactment in Canada of the Canadian Constitution.

As a matter of purely abstract law, this would not affect the supremacy of the British Parliament over the Canadian Constitution, nor the theoretical power of the British Parliament to repeal the Statute of Westminster and thus by implication revoke the legislative sovereignty which that Act provided for Canada. This is not, however, a matter of any practical importance. As Lord Sankey said, "It is doubtless true that the power of the Imperial Parliament to pass on its own initiative any legislation that it thought fit extending to Canada remains unimpaired, indeed, the Imperial Parliament could, as a matter of abstract law, repeal or disregard section 4 of the Statute. But that is theory and has no relation to realities."*

---

* *British Coal Corporation v. the King* (1935) AC 500, at p. 520.

2. *The Problem of 'Property and Civil Rights'*.—The extent of the 'safeguarded' clauses of the Constitution has been the major barrier to agreement on a new amending procedure for a quarter of a century. The essence of the matter is to determine the true area of 'property and civil rights' in the Constitution. The intention of the Fathers of Confederation was, in all probability, to safeguard by this phrase the system of private law in the Province of Quebec, which is founded on Roman rather than Common Law principles. The provision in Sect. 94, for uniformity of laws in the other provinces, to be brought about with their agreement by the enactment of uniform laws by Parliament suggests that this was their intention. However, the courts have interpreted the phrase much more widely to include practically the whole area of public policy in social legislation. A strong case on practical grounds can be made for making such legislation uniform throughout Canada. The chief obstacle to such uniformity is that the juridical widening of the meaning of 'property and civil rights' has made it possible for the Province of Quebec to assert its right to develop its own unique approach to social welfare.* If this part of Sect. 92 can be amended only by unanimous consent, there is introduced a severe rigidity and a completely effective obstacle to uniformity in the field of social legislation.

3. *The Problem of Delegation.*—The difficulty created by entrenching 'property and civil rights' in the Constitution might be avoided if it were possible, in the interests of efficiency and uniformity, for the provinces to delegate to the Federal Parliament powers that are assigned to them under the Constitution, but which they are willing to transfer.

There are two difficulties that stand in the way of modifying the present distribution of legislative power in order to permit the Federal Government to deal with a number of problems of national concern which were not foreseen as major functions of government in 1867. The first difficulty is that the Constitution as presently interpreted by the courts appears not to permit such delegation of authority from one level of government to another, because the courts have viewed the Constitution as dividing legislative power into "watertight compartments".† It would be possible to avoid this obstacle by a constitutional amendment validating such delegation.

The second obstacle is that, unless there were unanimous agreement among the provinces on what might be delegated, a situation might be created in which some provinces would be exercising legislative authority over a field—such as health insurance or the marketing of a natural product—while others had delegated their power to do so to Parliament. Thus the principle of symmetry and uniformity in the federal system would be lost. However, Sect. 94 already envisages a kind of asymmetry in which one province makes its own law relating to property and all of the others delegate the power to make uniform laws to Parliament. Thus, it may be that such a solution to the problem might be envisaged, though from one point of view it concedes far too much to the notion of "provincial rights" and seems to recognize the existence of a federal system in which the national Parliament and Government perform only the most limited and narrow functions in the Province of Quebec, but act as the centre of a much more unified federal State for the other nine provinces. There are many reasons why such a partial solution would be undesirable, but it may be the only workable compromise if the matter of domesticating the amending procedure is regarded as so urgent that further delay cannot be tolerated.

---

* "Quebec, in particular, could not easily consent to [the amendment of Sect. 92 by simple majority of provinces without renouncing not only part of its political autonomy but also its cultural autonomy, that is to say, the power of organizing independently the social life of its population according to its own conceptions of Man and life in society. For Quebec it was not merely a matter of greater material security, but of the maintenance and progress of its social institutions and of the way of life and very existence of the French-Canadian group as such." Quebec: *Royal Commission of Enquiry on Constitutional Problems* (1956) p. 167 (English text).

PART II.—MACHINERY OF GOVERNMENT

Section 1.—The Federal Government

Subsection 1.—The Executive

The Crown.—The British North America Act provides that "the Executive Government and authority of and over Canada is . . . vested in the Queen". The functions of the Crown, which are substantially the same as those of the Queen in relation to the Government of the United Kingdom, are discharged in Canada by the Governor General in accordance with established principles of responsible government. The practical executive functions of government are exercised by the Cabinet.

The Queen.—The personal participation of the Queen in the functions of the Crown in Canada has been limited to such occasions as the granting of honours and awards, approval of changes in the Table of Precedence, institution of new military awards, or the periodic appointment of a Governor General. On the occasion of a royal visit, the Queen may participate in those ceremonies that otherwise are carried out in her name, such as the opening and dissolution of Parliament, the assent to Bills, and the granting of a general amnesty.

Apart from her constitutional position in relation to the various governments of the Commonwealth countries, the Queen is Head of the Commonwealth and symbolizes the association of the member countries. Until 1953 the title of the Queen was the same throughout the Commonwealth. Constitutional developments put the title somewhat out of accord with the facts of the position, and in December 1952 it was decided by the Prime Ministers of the Commonwealth countries meeting at London, England, that new forms of title for each country should be devised. The title for Canada was approved by Parliament and established by a Royal Proclamation on May 29, 1953. The title of the Queen, so far as Canada is concerned, now is:—

> "Elizabeth the Second, by the Grace of God of the United Kingdom, Canada and Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith".

1.—Sovereigns of Canada since Confederation, 1867

Name	Dynasty	Year of Birth	Date of Accession
Victoria	House of Hanover	1819	June 20, 1837
Edward VII	House of Saxe-Coburg and Gotha	1841	Jan. 22, 1901
George V	House of Windsor	1865	May 6, 1910
Edward VIII	House of Windsor	1894	Jan. 20, 1936
George VI	House of Windsor	1895	Dec. 11, 1936
Elizabeth II	House of Windsor	1926	Feb. 6, 1952

The Governor General.—The Governor General, appointed by the Queen as her personal representative on the advice of the Prime Minister of Canada, traditionally serves for a term of five years. He exercises the executive authority of the Queen in relation to the Government of Canada under Letters Patent issued under the Great Seal of Canada (revised and re-issued, effective Oct. 1, 1947) and the provisions of the British North America Acts, 1867 to 1952. Acting under the recommendations of his responsible Ministers, in the Queen's name, he summons, prorogues and dissolves Parliament, assents to Bills, and exercises other executive functions.

The Governor General's annual salary and allowances provided by the Parliament of Canada are $48,666 and $100,000, respectively. In addition, other expenses of office are provided for, including the salary of the Governor General's secretary.

The present Governor General is styled His Excellency Major-General Georges P. Vanier, D.S.O., M.C., C.D.

2.—Governors General of Canada since Confederation, 1867

Name	Date of Appointment	Date of Assumption of Office
Viscount Monck, G.C.M.G.	June 1, 1867	July 1, 1867
Lord Lisgar, G.C.M.G.	Dec. 29, 1868	Feb. 2, 1869
The Earl of Dufferin, K.P., K.C.B., G.C.M.G.	May 22, 1872	June 25, 1872
The Marquis of Lorne, K.T., G.C.M.G.	Oct. 5, 1878	Nov. 25, 1878
The Marquis of Lansdowne, G.C.M.G.	Aug. 18, 1883	Oct. 23, 1883
Lord Stanley of Preston, G.C.B.	May 1, 1888	June 11, 1888
The Earl of Aberdeen, K.T., G.C.M.G.	May 22, 1893	Sept. 18, 1893
The Earl of Minto, G.C.M.G.	July 30, 1898	Nov. 12, 1898
Earl Grey, G.C.M.G.	Sept. 26, 1904	Dec. 10, 1904
Field Marshal H. R. H. The Duke of Connaught, K.G.	Mar. 21, 1911	Oct. 13, 1911
The Duke of Devonshire, K.G., G.C.M.G., G.C.V.O.	Aug. 19, 1916	Nov. 11, 1916
General The Lord Byng of Vimy, G.C.B., G.C.M.G., M.V.O.	Aug. 2, 1921	Aug. 11, 1921
Viscount Willingdon of Ratton, G.C.S.I., G.C.I.E., G.B.E.	Aug. 5, 1926	Oct. 2, 1926
The Earl of Bessborough, G.C.M.G.	Feb. 9, 1931	Apr. 4, 1931
Lord Tweedsmuir of Elsfield, G.C.M.G., G.C.V.O., C.H.	Aug. 10, 1935	Nov. 2, 1935
Major-General The Earl of Athlone, K.G., P.C., G.C.B., G.C.M.G., G.C.V.O., D.S.O.	Apr. 3, 1940	June 21, 1940
Field Marshal Viscount Alexander of Tunis, K.G., G.C.B., G.C.M.G., C.S.I., D.S.O., M.C., A.D.C.	Aug. 1, 1945	Apr. 12, 1946
The Right Honourable Vincent Massey, C.H.	Jan. 24, 1952	Feb. 28, 1952
Major-General Georges P. Vanier, D.S.O., M.C., C.D.	Aug. 1, 1959	Sept. 15, 1959

The Cabinet.—The Cabinet is a committee of Ministers chosen by the Prime Minister generally from Members of Parliament. By convention, all members of the Cabinet must either have seats in Parliament or secure seats within a short time and, again by convention, all Ministers in charge of departments of government must be members of the House of Commons. Ministers without Portfolio can be members of either House.

The Cabinet, under the leadership of the Prime Minister, directs the business of the Commons, initiates nearly all public Bills placed before Parliament, and has complete responsibility for the initiation of taxes and the recommendation of expenditures. Following established precedent or convention, it is always responsible to the Commons. When the Cabinet (the Government) suffers defeat on a Government Bill or a vote of censure or on a motion of want of confidence in the Commons, the existing Government or Cabinet must either resign or request a dissolution from the Governor General. If it resigns, the Governor General may call on the Leader of the Opposition in the Commons to form a new Government. Alternatively, if a Government that has been defeated in the House is granted a dissolution and is defeated in the ensuing general election then, should no clear majority be indicated, the Government may decide (1) to remain in office and seek a vote of confidence in the House when it meets or (2) to resign immediately with the consequent result that the Governor General will ask the leader of the party with the highest number of members returned to form a new Government. These alternatives may also eventuate as a result of a general election subsequent to the normal dissolution of Parliament at or near the close of its statutory life.

The primary responsibility of the Governor General in either of the above circumstances is to provide the nation with a Cabinet or Ministry capable of conducting Her Majesty's Government with the support of the House of Commons.

Although appointed by the Governor General, Cabinet members are selected by the Prime Minister from among his party colleagues in such manner as to ensure, as far as possible, representation of the several geographical and political regions of the country and its principal ethnic, religious and social interests. Each Cabinet Minister generally assumes charge of one of the departments of government, although a Minister may hold more than one portfolio at the same time or he may hold one or more portfolios and one or more acting portfolios, or a Minister without Portfolio may hold one or more acting portfolios. In his acting capacity, the Minister exercises the same authority as if he were the Minister of the department. Sessional and other allowances received by Cabinet Ministers are given at pp. 73-74.

3.—Prime Ministers since Confederation, 1867

Ministry	Prime Minister	Length of Administration
1	Rt. Hon. Sir John Alexander Macdonald	July 1, 1867 — Nov. 5, 1873
2	Hon. Alexander Mackenzie	Nov. 7, 1873 — Oct. 16, 1878
3	Rt. Hon. Sir John Alexander Macdonald	Oct. 17, 1878 — June 6, 1891
4	Hon. Sir John Joseph Caldwell Abbott	June 16, 1891 — Nov. 24, 1892
5	Rt. Hon. Sir John Sparrow David Thompson	Dec. 5, 1892 — Dec. 12, 1894
6	Hon. Sir Mackenzie Bowell	Dec. 21, 1894 — Apr. 27, 1896
7	Hon. Sir Charles Tupper	May 1, 1896 — July 8, 1896
8	Rt. Hon. Sir Wilfrid Laurier	July 11, 1896 — Oct. 6, 1911
9	Rt. Hon. Sir Robert Laird Borden	Oct. 10, 1911 — Oct. 12, 1917 (Conservative Administration)
10	Rt. Hon. Sir Robert Laird Borden	Oct. 12, 1917 — July 10, 1920 (Unionist Administration)
11	Rt. Hon. Arthur Meighen	July 10, 1920 — Dec. 29, 1921 (Unionist—"National Liberal and Conservative Party")
12	Rt. Hon. William Lyon Mackenzie King	Dec. 29, 1921 — June 28, 1926
13	Rt. Hon. Arthur Meighen	June 29, 1926 — Sept. 25, 1926
14	Rt. Hon. William Lyon Mackenzie King	Sept. 25, 1926 — Aug. 6, 1930
15	Rt. Hon. Richard Bedford Bennett	Aug. 7, 1930 — Oct. 23, 1935
16	Rt. Hon. William Lyon Mackenzie King	Oct. 23, 1935 — Nov. 15, 1948
17	Rt. Hon. Louis Stephen St. Laurent	Nov. 15, 1948 — June 21, 1957
18	Rt. Hon. John George Diefenbaker	June 21, 1957 — ...

4.—Members of the Eighteenth Ministry, as at Jan. 1, 1961[1]

(According to precedence of Ministers)

Note.—A complete list of the members of Federal Ministries from Confederation to 1913 appears in the 1912 Year Book, pp. 422-429. Later Ministries will be found in subsequent editions.

Office	Occupant	Date of First Appointment[2]	Date of Appointment to Present Portfolio
Prime Minister	Rt. Hon. John George Diefenbaker	June 21, 1957	June 21, 1957
Secretary of State for External Affairs	Hon. Howard Charles Green	June 21, 1957	June 4, 1959
Minister of Finance and Receiver General	Hon. Donald Methuen Fleming	June 21, 1957	June 21, 1957
Minister of Trade and Commerce	Hon. George Hees	June 21, 1957	Oct. 11, 1960
Minister of Transport	Hon. Léon Balcer	June 21, 1957	Oct. 11, 1960
Minister of Veterans Affairs	Hon. Gordon Churchill	June 21, 1957	Oct. 11, 1960
Minister of Justice and Attorney General	Hon. Edmund Davie Fulton	June 21, 1957	June 21, 1957
Minister of National Revenue	Hon. George Clyde Nowlan	June 21, 1957	June 21, 1957
Minister of National Defence	Hon. Douglas Scott Harkness	June 21, 1957	Oct. 11, 1960
Minister of Citizenship and Immigration	Hon. Ellen Louks Fairclough	June 21, 1957	May 12, 1958
Minister of Fisheries	Hon. J. Angus MacLean	June 21, 1957	June 21, 1957
Minister of Labour	Hon. Michael Starr	June 21, 1957	June 21, 1957
Postmaster General	Hon. William McLean Hamilton	June 21, 1957	June 21, 1957
Solicitor General	Hon. William J. Browne	June 21, 1957	Oct. 11, 1960
Minister of Mines and Technical Surveys	Hon. Paul Comtois	Aug. 7, 1957	Aug. 7, 1957
Minister of National Health and Welfare	Hon. Jay Waldo Monteith	Aug. 22, 1957	Aug. 22, 1957
Minister of Agriculture	Hon. Francis Alvin George Hamilton	Aug. 22, 1957	Oct. 11, 1960
Minister of Defence Production	Hon. Raymond Joseph Michael O'Hurley	May 12, 1958	May 12, 1958
Minister of Public Works	Hon. David James Walker	Aug. 20, 1959	Aug. 20, 1959
Associate Minister of National Defence	Hon. Joseph Pierre Albert Sévigny	Aug. 20, 1959	Aug. 20, 1959
Minister of Forestry	Hon. Hugh John Flemming	Oct. 11, 1960	Oct. 11, 1960
Secretary of State	Hon. Noël Dorion	Oct. 11, 1960	Oct. 11, 1960
Minister of Northern Affairs and National Resources	Hon. Walter Dinsdale	Oct. 11, 1960	Oct. 11, 1960
Minister without Portfolio	Hon. George Ernest Halpenny	Oct. 11, 1960	Oct. 11, 1960

[1] Any changes occurring between Jan. 1, 1961 and the date of going to press will be carried in an Appendix to this volume. [2] Appointee was not necessarily sworn in on date given.

Parliamentary Secretaries.—As provided by the Parliamentary Secretaries Act (SC 1959, c. 15), assented to June 4, 1959, 15 Parliamentary Secretaries were appointed (one on Aug. 20, 1959 and 14 on Nov. 18, 1959) from among the Members of the House of Commons to hold office for twelve months and to assist the respective Ministers in such manner as each Minister may direct. In so doing, the Government revived the system of parliamentary assistantships in practice during the war and postwar years subsequent to 1943, whereby Cabinet Ministers might receive assistance in the performance of their parliamentary functions and promising Members of the House might secure a degree of apprenticeship for higher public office. These appointments were extended for one year on Nov. 18, 1960 and a second Parliamentary Secretary to the Minister of Agriculture was appointed on Oct. 11, 1960. Table 5 lists Parliamentary Secretaries in office on Jan. 1, 1961.

5.—Parliamentary Secretaries, as at Jan. 1, 1961

Secretary	Minister	Date of First Appointment
Thomas M. Bell	Justice	Nov. 18, 1959
Richard A. Bell	Finance	Nov. 18, 1959
L. E. Cardiff	Agriculture	Nov. 18, 1959
Egan Chambers	National Defence	Nov. 18, 1959
John A. Charlton	Citizenship and Immigration	Nov. 18, 1959
Roland L. English	Fisheries	Nov. 18, 1959
Clayton W. Hodgson	Transport	Nov. 18, 1959
Harry Jones	Veterans Affairs	Nov. 18, 1959
Warner J. Jorgenson	Agriculture	Oct. 11, 1960
Marcel Lambert	National Revenue	Nov. 18, 1959
Paul Martineau	Prime Minister	Nov. 18, 1959
Edmund L. Morris	Trade and Commerce	Nov. 18, 1959
Wallace B. Nesbitt	External Affairs	Aug. 20, 1959
John C. Pallett	Prime Minister	Nov. 18, 1959
Yvon-Roma Tassé	Public Works	Nov. 18, 1959
Richard D. Thrasher	Labour	Nov. 18, 1959

The Privy Council.—The Queen's Privy Council for Canada is composed of around ninety members who are sworn of the Council by the Governor General on the advice of the Prime Minister and who retain membership for life. The Council consists chiefly of present and former Ministers of the Crown. It seldom meets as a body and its constitutional responsibilities as adviser to the Crown in respect to Canada are performed exclusively by a committee thereof consisting of the Ministers who constitute the Cabinet of the day and are also members of the Queen's Privy Council for Canada.

6.—Members of the Queen's Privy Council for Canada According to Seniority Therein, as at Jan. 1, 1961

Note.—In this list the prefix "Rt. Hon." indicates membership in the United Kingdom Privy Council. Clerk of the Privy Council and Secretary to the Cabinet, R. B. Bryce; Assistant Clerk of the Privy Council, A. M. Hill.

Member[1]	Date When Sworn In	Member[1]	Date When Sworn In
Hon. Esioff Léon Patenaude	Oct. 6, 1915	Hon. George Black	Aug. 3, 1951
Hon. Albert Sévigny	Jan. 8, 1917	Earl Alexander of Tunis	Jan. 29, 1952
Hon. Thomas Alexander Crerar	Oct. 12, 1917	Hon. James Sinclair	Oct. 15, 1952
Hon. Henry Herbert Stevens	Sept. 21, 1921	Hon. Ralph Osborne Campney	Oct. 15, 1952
Hon. Edward James McMurray	Nov. 14, 1923	Hon. William Ross Macdonald	May 12, 1953
Rt. Hon. Charles Vincent Massey	Sept. 16, 1925	Hon. George Alexander Drew	May 12, 1953
Hon. William Daum Euler	Sept. 25, 1926	Hon. John Whitney Pickersgill	June 12, 1953
H.R.H. The Duke of Windsor	Aug. 2, 1927	Rt. Hon. Thibaudeau Rinfret	Sept. 16, 1953

[1] The ordinary legal limit of duration for each Parliament is five years. [2] Duration of Parliament in years, months and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive (B.N.A. Act, Sect. 50). [3] Date of general election. [4] Writs returnable. [5] Dissolution of Parliament. [6] Includes long adjournment from Nov. 29, 1956 to Jan. 8, 1957.

Subsection 2.—The Legislature

The federal legislative authority is vested in the Parliament of Canada consisting of the Queen, an Upper House styled the Senate, and the House of Commons. Bills may originate in either the Senate or the House subject to the provisions of Sect. 53 of the British North America Act, 1867, which provides that Bills for the appropriation of any part of the public revenue or the imposition of any tax or impost shall originate in the House of Commons. Bills must pass both Houses and receive Royal Assent before becoming law. In practice most public Bills originate in the House of Commons, although there has been a marked increase recently in the introduction of public Bills in the Senate, at the instance of the Government, in order that Bills may be dealt with in the Senate while the Commons is engaged in other matters such as the debate on the Speech from the Throne. Private Bills usually originate in the Senate. The Senate may delay, amend or even refuse to pass Bills sent to it from the Commons, but differences are usually settled without serious conflict. (See Chap. XXVI for current legislation.)

Under Sect. 91 of the British North America Acts, 1867-1952, the legislative authority of the Parliament of Canada extends to the following matters: the amendment of the Constitution of Canada (subject to certain exceptions); the public debt and property; the regulation of trade and commerce; unemployment insurance; the raising of money by any mode or system of taxation; the borrowing of money on the public credit; postal service; the Census and statistics; militia, military and naval service, and defence; the fixing of and providing for the salaries and allowances of civil and other officers of the Government of Canada; beacons, buoys, lighthouses and Sable Island; navigation and shipping; quarantine and the establishment and maintenance of marine hospitals; sea coast and inland fisheries; ferries between a province and any British or foreign country or between two provinces; currency and coinage, banking, incorporation of banks and the issue of paper money; savings banks; weights and measures; bills of exchange and promissory notes; interest; legal tender; bankruptcy and insolvency; patents of invention and discovery; copyrights; Indians and lands reserved for the Indians; naturalization and aliens; marriage and divorce; the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters; the establishment, maintenance and management of penitentiaries; such classes of subjects as are expressly excepted in the enumeration of the classes of subjects by these Acts assigned exclusively to the legislatures of the provinces.

Under Sect. 95, the Parliament of Canada may make laws in relation to agriculture and immigration concurrently with provincial legislatures although federal legislation is paramount in the event of conflict. By the British North America Act, 1951 (U.K. Stat. 1950-51, c. 32) it is declared that the Parliament of Canada might make laws in relation to old age pensions in Canada but no such law shall affect the operation of any provincial laws in relation to old age pensions.

The Senate.—From an original membership of 72 at Confederation, the Senate, through the addition of new provinces and the general growth of population, now has 102 members, the latest change in representation having been made on the admission of Newfoundland to Confederation in 1949. The growth of representation in the Senate is traced in the 1940 Year Book, pp. 47-49, and is summarized by provinces in Table **8.**

Senators are appointed for life by the Governor General by instrument under the Great Seal of Canada on the recommendation of the Prime Minister. The actual power of appointing Senators resides by constitutional usage in the Prime Minister whose advice the Governor General accepts in this regard. In each of the four main divisions of Canada, except Quebec, Senators represent the whole of the province for which they are appointed; in Quebec one Senator is appointed for each of the 24 electoral divisions of what was formerly Lower Canada. The deliberations of the Senate are presided over by a Speaker appointed by the Governor General in Council (in effect by the Government) and government business in the Senate is sponsored by the Government Leader in the Senate.

The Senate is not a competitor of the House of Commons in the field of legislation, but, in the main, acts as a second chamber giving further scrutiny to legislation initiated in the House of Commons. Under the Constitution, Bills for appropriating any part of the public revenue or for imposing a tax or impost must originate in the Commons but in every other respect, since both Houses must concur in every piece of legislation, the Senate has an equal voice with the House of Commons.

9.—Members of the Senate, by Province, as at Jan. 1, 1961[1]

Speaker.......................................Hon. Mark Robert Drouin
Leader of the Government..........................Hon. Walter M. Aseltine
Leader of the Opposition..........................Hon. William Ross Macdonald
Clerk of the Senate and Clerk of the Parliaments......John Forbes MacNeill

(Ranked according to seniority, by province. All Senators are entitled to the designation "Honourable".)

[1] Any changes occurring between Jan. 1, 1961 and the date of going to press will be carried in an Appendix to this volume.

The House of Commons.—The British North America Act, 1867 provided that in respect of representation in the House of Commons the Province of Quebec should have the fixed number of sixty-five members and that there should be assigned to each of the other provinces such a number of members as would bear the same proportion to the number of its population as the number sixty-five bears to the number of the population of Quebec. This Act also provided that on the completion of a census in 1871 and of each subsequent decennial census the representation of the several provinces should be readjusted from time to time provided the proportionate representation of the provinces as prescribed by the Act were not thereby disturbed.

In the session of 1946 the House of Commons adopted a resolution stating that the effect of the provisions of the British North America Act relating to representation had not been satisfactory in that proportionate representation of the provinces according to population had not been maintained and that a more equitable apportionment of members to the various provinces could be effected if readjustments were made on the basis of the population of all the provinces taken as a whole. The Act was amended accordingly in 1946 to provide a new rule to regulate representation in the House of Commons. Generally speaking, representation was fixed as follows:—

> The membership assigned to each province shall be computed by dividing the total population of the provinces by two hundred and fifty-four and by dividing the population of each province by the quotient so obtained.

This rule, employed in the redistribution of representation made in 1947, was effective in the General Election of 1949.

After the completion of the 1951 Census it was apparent that as a result of a wartime shift of population a substantial reduction in the representation of the Province of Saskatchewan would ensue under the rules then regulating representation. Accordingly, in an effort to eliminate sharp reductions in provincial representation from one census to another, the British North America Act was again amended to provide representation on the following basis:—

> "Sect. 51.—(1) Subject as hereinafter provided, the number of members of the House of Commons shall be two hundred and sixty-three and the representation of the provinces therein shall forthwith upon the coming into force of this section and thereafter on the completion of each decennial census be readjusted by such authority, in such manner, and from such time as the Parliament of Canada from time to time provides, subject and according to the following rules:—
>
> "1. There shall be assigned to each of the provinces a number of members computed by dividing the total population of the provinces by two hundred and sixty-one and by dividing the population of each province by the quotient so obtained, disregarding, except as hereinafter in this section provided, the remainder, if any, after the said process of division.
>
> "2. If the total number of members assigned to all the provinces pursuant to rule one is less than two hundred and sixty-one, additional members shall be assigned to the provinces (one to a province) having remainders in the computation under rule one commencing with the province having the largest remainder and continuing with the other provinces in the order of the magnitude of their respective remainders until the total number of members assigned is two hundred and sixty-one.
>
> "3. Notwithstanding anything in this section, if upon completion of a computation under rules one and two, the number of members to be assigned to a province is less than the number of senators representing the said province, rules one and two shall cease to apply in respect of the said province, and there shall be assigned to the said province a number of members equal to the said number of senators.
>
> "4. In the event that rules one and two cease to apply in respect of a province then, for the purpose of computing the number of members to be assigned to the provinces in respect of which rules one and two continue to apply, the total population of the provinces shall be reduced by the number of the population of the province in respect of which rules one and two have ceased to apply and the number two hundred and sixty-one shall be reduced by the number of members assigned to such province pursuant to rule three.
>
> "5. On any such readjustment the number of members for any province shall not be reduced by more than fifteen per cent below the representation to which such province was entitled under rules one to four of this subsection at the last preceding readjustment of the representation of that province, and there shall be no reduction in the representation of any province as a result of which that province would have a smaller number of members

> than any other province that according to the results of the then last decennial census did not have a larger population; but for the purposes of any subsequent readjustment of representation under this section any increase in the number of members of the House of Commons resulting from the application of this rule shall not be included in the divisor mentioned in rules one to four of this subsection.
>
> "6. Such readjustment shall not take effect until the termination of the then existing Parliament.
>
> "(2) The Yukon Territory as constituted by chapter forty-one of the Statutes of Canada, 1901, shall be entitled to one member, and such other part of Canada not comprised within a province as may from time to time be defined by the Parliament of Canada shall be entitled to one member." (RSC 1952, c. 304.)

The principal effect of these latest rules is that the representation of any province shall not be reduced by more than 15 p.c. at any one readjustment, subject however to the qualification that the rule shall not work out in such manner that the representation of a province with a smaller population shall be greater than any province with a larger population.

Subsequently, Parliament enacted a measure, "An Act to readjust the Representation in the House of Commons, 1952", effective in the General Election of 1953, which provided that representation in the House of Commons shall be on the following basis:—

> "Sect. 2.—Eighty-five members of the House of Commons shall be elected for the Province of Ontario, seventy-five for the Province of Quebec, twelve for the Province of Nova Scotia, ten for the Province of New Brunswick, fourteen for the Province of Manitoba, twenty-two for the Province of British Columbia, four for the Province of Prince Edward Island, seventeen for the Province of Saskatchewan, seventeen for the Province of Alberta, seven for the Province of Newfoundland, one for the Yukon Territory and one for Mackenzie district of the Northwest Territories, thus making a total of two hundred and sixty-five members." (RSC 1952, c. 334.)

The number of representatives of each province elected at each of the 23 General Elections since Confederation is given in Table **10**.

Under their parliamentary system of representation, based on a "constitution similar in principle to that of the United Kingdom", the people of Canada elect representatives having various political party affiliations as shown in Table **11**. In a general election, the Canadian electorate not only determines what political party leader shall be called on to form the Government of the day, but it also decides which of the parties is to become the Official Opposition. Her Majesty's Loyal Opposition occupies an essential place in constitutions based on the British parliamentary system, in that its function is to oppose or criticize in debate the Government in power—an essential to good government at all times. The Official Opposition is founded, like such institutions as the Cabinet and the Prime Ministership, on unwritten custom that has become firmly established. Although the position of Leader of the Opposition is not recognized in the British North America Act, it received statutory acknowledgment in the Canadian Parliament in 1905 when the

Senate and House of Commons Act (SC 1905, c. 43, Sect. 2) provided an additional sessional allowance to "the member occupying the recognized position of Leader of the Opposition in the House of Commons".

11.—Electoral Districts, Voters on List and Votes Polled, Names and Addresses of Members of the House of Commons as Elected at the Twenty-Fourth General Election, Mar. 31, 1958, and Revised to Jan. 1, 1961.[1]

Speaker.......................................Hon. Roland Michener
Prime Minister..............................Rt. Hon. John George Diefenbaker
Leader of the Opposition...................Hon. Lester B. Pearson
Clerk of the House of Commons............Léon J. Raymond

Note.—The vote is summarized by provinces in Table 13, p. 74. The leaders of the political parties are indicated by asterisks (*). This information, except the population of constituencies, has been supplied by the Chief Electoral Officer. Party affiliations are unofficial. P.C.=Progressive Conservative; Lib.=Liberal; C.C.F. =Co-operative Commonwealth Federation; L.-Lab.=Liberal-Labour.

[1] Any by-elections held between Jan. 1, 1961 and the date of going to press will be included in an Appendix to this volume. [2] New Party.

Indemnities and Allowances.—Members of the Senate receive a sessional allowance at the rate of $8,000 per annum. In addition they receive at the end of each calendar year an annual expense allowance of $2,000 which is subject to income tax. Members of the House of Commons are paid a sessional allowance at the rate of $8,000 per annum. In addition they receive $2,000 as an expense allowance paid at the end of each calendar year. This allowance, except that for Ministers of the Crown and for Leaders of the Opposition in the House and in the Senate, is not subject to income tax. The remuneration of the Prime Minister is $25,000 a year and of a Cabinet Minister and the Leader of the Opposition $15,000 a year in addition to the sessional allowance and expense allowance each receives as a Member of Parliament. A Cabinet Minister is also entitled to a motor car allowance of $2,000. The remuneration of a Minister without Portfolio is $7,500 a year in addition to the sessional allowance and expense allowance, the latter taxable. The Speaker of the Senate and of the House of Commons each receives, besides the sessional allowance and expense allowance, a salary of $9,000 and a motor car allowance of $1,000 and each is entitled to $3,000 in lieu of a residence. The Deputy Speaker of the House of Commons receives a salary of $6,000 and an allowance of $1,500 in lieu of a residence. The Deputy Chairman of Committees receives an annual allowance of $2,000. Parliamentary Secretaries to the Ministers of the Crown receive $8,000 sessional allowance as Members of Parliament, $4,000 a year as Parliamentary Secretaries and the $2,000 expense allowance paid to all Members of Parliament.

The Federal Franchise.—The present federal franchise laws are contained in the Canada Elections Act (RSC 1952, c. 23). The franchise is conferred upon all Canadian citizens or British subjects, men and women, who have attained the age of 21 years and who have been ordinarily resident in Canada for 12 months prior to polling day at a federal election and ordinarily resident in the electoral district on the date of the issue of the writ ordering such election. Persons denied the right to vote are:—

(1) The Chief Electoral Officer and the Assistant Chief Electoral Officer;
(2) Judges appointed by the Governor General in Council;
(3) The returning officer for each electoral district;
(4) Persons undergoing punishment as inmates of any penal institution for the commission of any offence;
(5) Persons restrained of their liberty or deprived of the management of their property by reason of mental disease;
(6) Persons disqualified under any law relating to the disqualification of electors for corrupt and illegal practices.

Prior to July 1, 1960, the list of persons denied the right to vote included "Indians ordinarily resident on an Indian reserve who were not members of His Majesty's Forces in World Wars I or II or who did not execute a waiver of exemption under the Indian Act from taxation on and in respect of personal property". Legislation proclaimed on the above-mentioned date confers upon all Indians who have attained the age of 21 years, the right to vote at federal elections, without taking from them any of the rights and privileges to which they are entitled under the Indian Act.

The Canadian Forces Voting Rules set out in Schedule III to the Canada Elections Act prescribe voting procedure for members of the Armed Forces of Canada and also for veterans in receipt of treatment or domiciliary care in certain institutions.

13.—Voters on the Lists and Votes Polled at the Federal General Elections of 1949, 1953, 1957 and 1958

NOTE.—Corresponding statistics for the General Elections of 1911, 1917, 1921 and 1925 are given in the 1926 Year Book, p. 82; those for 1926 in the 1945 edition, p. 66; those for 1930 and 1935 in the 1948-49 edition, p. 94; those for 1940 in the 1956 edition, p. 81; and those for 1945 in the 1957-58 edition, p. 57.

[1] Each voter in the double-member constituency of Queens County, P.E.I., had two votes; in 1958, 24,930 voters on the list cast 42,954 votes. [2] Each voter in the double-member constituency of Halifax, N.S., had two votes; in 1958, 112,253 voters on the list cast 179,287 votes. [3] Electoral District of Yukon. [4] Electoral District of Mackenzie River.

Subsection 3.—The Judiciary

The Federal Judiciary

The Parliament of Canada is empowered by Sect. 101 of the British North America Act to provide from time to time for the constitution, maintenance and organization of a general Court of Appeal for Canada and for the establishment of any additional courts for the better administration of the laws of Canada. Under this provision, Parliament has established the Supreme Court of Canada, the Exchequer Court of Canada and certain miscellaneous courts.

Supreme Court of Canada.—This Court, first established in 1875 and now governed by the Supreme Court Act (RSC 1952, c. 259), consists of a chief justice, who is called the Chief Justice of Canada, and eight puisne judges. The chief justice and the puisne judges are appointed by the Governor in Council and they hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and exercises general appellate jurisdiction throughout Canada in civil and criminal cases. The Court is also required to consider and advise upon questions referred to it by the Governor in Council and it may also advise the Senate or the House of Commons on private Bills referred to the Court under any rules or orders of the Senate or of the House of Commons.

Appeals may be brought from any final judgment of the highest court of final resort in a province in any case where the amount or value of the matter in controversy exceeds the sum of $10,000. An appeal may be brought from any other final judgment with leave of the highest court of final resort in the province; if such court refuses to grant leave the Supreme Court of Canada may grant leave to appeal. The Supreme Court may grant leave to appeal from any judgment whether final or not. Appeals in respect of indictable offences are regulated by the Criminal Code. Appeals from federal courts are regulated by the statute establishing such courts. The judgment of the Supreme Court of Canada in all cases is final and conclusive.

14.—Chief Justice and Judges of the Supreme Court of Canada, as at Jan. 1, 1961

(In order of seniority)

Name	Date of Appointment
Hon. Chief Justice Patrick Kerwin	July 1, 1954[1]
Hon. Justice Robert Taschereau	Feb. 9, 1940
Hon. Justice Charles H. Locke	June 3, 1947
Hon. Justice John R. Cartwright	Dec. 23, 1949
Hon. Justice J. H. Gerald Fauteux	Dec. 23, 1949
Hon. Justice Douglas Charles Abbott	July 1, 1954
Hon. Justice Ronald Martland	Jan. 15, 1958
Hon. Justice Wilfred Judson	Feb. 5, 1958
Hon. Justice Roland A. Ritchie	May 5, 1959

[1] First appointed as a Judge of the Supreme Court, July 20, 1935.

Exchequer Court of Canada.—The Exchequer Court was first established in 1875 as part of the Supreme Court of Canada but is now a separate court governed by the Exchequer Court Act (RSC 1952, c. 98). The Court consists of a president and four puisne judges who are appointed by the Governor in Council. The president and the puisne judges hold office during good behaviour but may be removed by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and also at any other place in Canada where sittings may be fixed by the Court. The jurisdiction of the Court extends to cases where claims are made by or against the Crown in right of Canada. Proceedings against the Crown are taken by petition of right pursuant to the Petition of Right Act (RSC 1952, c. 210).

An appeal lies to the Supreme Court of Canada from any final judgment of the Exchequer Court in which the amount in controversy exceeds $500; an appeal also lies with leave of the Supreme Court in certain cases where the amount in controversy does not exceed $500 or where the judgment is not final.

The Exchequer Court also exercises admiralty jurisdiction in Canada. This was first conferred in 1891 by the Admiralty Act (SC 1891, c. 29) and is now governed by the Admiralty Act (RSC 1952, c. 1). Under this statute the Exchequer Court is continued as a Court of Admiralty. The president and puisne judges of the Exchequer Court exercise admiralty jurisdiction throughout the whole of Canada. In addition, Canada is divided into various admiralty districts; a district judge in admiralty is appointed for each district. Appeals to the Supreme Court of Canada from judgments of the president or the puisne judges are governed by the general appeal provisions in the Exchequer Court Act. Appeals may be taken from a final judgment of a district judge in admiralty either to the Exchequer Court or direct to the Supreme Court of Canada.

Miscellaneous Courts.—*Railway Act.*—The Railway Act, 1903 (RSC 1952, c. 234) established the Board of Railway Commissioners for Canada as a court of record; by the Transport Act, 1938 (RSC 1952, c. 271) the name was changed to the Board of Transport Commissioners for Canada. This Court exercises jurisdiction with respect to railway matters. The Governor in Council is given jurisdiction to vary any order of the Board and an appeal lies from the Board to the Supreme Court of Canada upon a question of jurisdiction or a question of law.

Bankruptcy Act.—By virtue of Sect. 91 (21) of the British North America Act, 1867, Parliament has exclusive legislative jurisdiction in relation to bankruptcy and insolvency. By the Bankruptcy Act (RSC 1952, c. 14) the superior courts of the provinces are constituted bankruptcy courts; original jurisdiction is conferred upon the trial courts and appellate jurisdiction is conferred upon the appeal courts of the provinces.

Income Tax Act and Estate Tax Act.—By the Income Tax Act (RSC 1952, c. 148) the Tax Appeal Board is established consisting of a chairman and not fewer than two or more than four members with jurisdiction over appeals against income tax assessments. A further appeal may be taken to the Exchequer Court. Under the Estate Tax Act (SC 1958, c. 29) the Tax Appeal Board also has jurisdiction to hear appeals from assessments under that Act.

Provincial and Territorial Judiciaries*

Certain provisions of the British North America Act govern to some extent the provincial judiciaries. Under Sect. 92 (14) the legislature of each province exclusively may make laws in relation to the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction. Sect. 96 provides that the Governor General shall appoint the judges of the superior, district and county courts in each province, except those of the courts of probate in Nova Scotia and New Brunswick. Sect. 100 provides that the salaries, allowances and pensions of judges of the superior, district and county courts (except the courts of probate in Nova Scotia and New Brunswick) are to be fixed and provided by the Parliament of Canada and these are set out in the Judges Act (RSC 1952, c. 159). Under Sect. 99 the judges of the superior courts hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. The tenure of office of district and county court judges is fixed by the Judges Act as being during good behaviour and their residence within the area for which the court is established.

All provinces have minor courts with limited civil and criminal jurisdiction, the judges of which are appointed by provincial authority as, for example, justices of the peace, magistrates and juvenile court judges. Except in Quebec, there are county or district courts of each province with limited jurisdiction varying from $500 to $2,500 in amount. Each province has a superior court with virtually unlimited jurisdiction variously known as Court of Queen's Bench, Supreme Court, Superior Court, etc. There is also a Court of Appeal in each province.

---

* More detailed information concerning provincial judiciaries is given in the 1954 Year Book, pp. 48-55.

The Yukon Act and the Northwest Territories Act each provide for a superior court of record in and for the Territory, called the Territorial Court, and consisting of one or more judges appointed by the Governor in Council. The judges of the Territorial Court of the Yukon Territory are ex officio judges of the Territorial Court of the Northwest Territories and vice versa. In 1960 provision was made for a Court of Appeal for the Yukon Territory, comprised of the Chief Justice and Justices of Appeal of British Columbia and Judges of the Territorial Court of Yukon and of the Northwest Territories. Police magistrates and justices of the peace have jurisdiction in minor civil and criminal cases.

Section 2.—Provincial and Territorial Governments*

In each of the provinces, the Queen is represented by a Lieutenant-Governor appointed by the Governor General in Council. The Lieutenant-Governor acts on the advice and with the assistance of his Ministry or Executive Council which is responsible to the Legislature and resigns office under circumstances similar to those described on pp. 59-60 concerning the Federal Government.

The Legislature of each province is unicameral, consisting of the Lieutenant-Governor and a Legislative Assembly, except for the Province of Quebec where there is a Legislative Council as well as a Legislative Assembly.

The Legislative Assembly is elected by the people for a statutory term of five years but may be dissolved within that period by the Lieutenant-Governor on the advice of the Premier of the province.

The source of legislative authority of the Provincial Legislatures is the British North America Act, 1867 (U.K. Stat. 1867, c. 3 and amendments). Under Sect. 92 of the Act the Legislature of each province exclusively may make laws in relation to the following matters: amendment of the constitution of the province except as regards the Lieutenant-Governor; direct taxation within the province; borrowing of money on the credit of the province; establishment and tenure of provincial offices and appointment and payment of provincial officers; the management and sale of public lands belonging to the province and of the timber and wood thereon; the establishment, maintenance and management of public and reformatory prisons in and for the province; the establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals; municipal institutions in the province; shop, saloon, tavern, auctioneer and other licences issued for the raising of provincial or municipal revenue; local works and undertakings other than interprovincial or international lines of ships, railways, canals, telegraphs, etc., or works which, though wholly situated within one province, are declared by the Federal Parliament to be for the general advantage either of Canada or of two or more provinces; the incorporation of companies with provincial objects; the solemnization of marriage in the province; property and civil rights in the province; the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction including procedure in civil matters in these courts; the imposition of punishment by fine, penalty or imprisonment for enforcing any law of the province relating to any of the aforesaid subjects; generally all matters of a merely local or private nature in the province.

Further, in and for each province the Legislature exclusively may, under Sect. 93, make laws in relation to education subject to certain restrictions relating to the establishment of schools by religious minorities. These powers with similar restrictions were conferred on the more recently admitted provinces on their inclusion in the federation.

---

* The information given in Subsections 1 to 9 of this Section is brought up to Jan. 1, 1961.

The Provincial Legislatures may also make laws under Sect. 95 in relation to agriculture and immigration, subject to any laws of the Parliament of Canada in relation to these subjects.

Provincial Franchise.—Details regarding qualifications and disqualifications of the franchise are contained in the Elections Act of each province. In general, every person, male or female, at the age of 21 years who is a Canadian citizen or other British subject, who complies with certain residence requirements in the province and the electoral district of polling and who falls under no statutory disqualifications, is entitled to vote. These qualifications apply with modifications to voters in most provinces. The principal exceptions give voting privileges to persons in Saskatchewan at the age of 18 and in Alberta and British Columbia at 19 years.

Subsection 1.—Newfoundland

The Government of Newfoundland consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Legislative Assembly has 36 members elected for a term of five years. The Legislature elected Aug. 20, 1959 is the 32nd in the history of Newfoundland and the 4th since Confederation.

Since the date of Confederation, Mar. 31, 1949, the province has had three Lieutenant-Governors: the Hon. Sir Albert Joseph Walsh commissioned Apr. 1, 1949; the Hon. Lt.-Col. Sir Leonard Outerbridge commissioned Sept. 5, 1949; and the Hon. Campbell Macpherson commissioned Dec. 16, 1959. The first Ministry, formed on July 13, 1949 under the leadership of the Hon. Joseph R. Smallwood, was still in office on Jan. 1, 1961.

The Premier receives a salary of $10,000 and the other Cabinet Ministers $9,000 per annum, plus a sessional indemnity of $3,333.33. Each member of the House of Assembly receives a sessional indemnity of $3,333.33 plus a travelling and expense allowance of $1,666.66. An additional allowance of $3,000 is made to the Leader of the Opposition.

15.—First Ministry of Newfoundland, as at Jan. 1, 1961

(Party standing at latest General Election, Aug. 20, 1959: 31 Liberal, 3 Progressive Conservative and 2 United Newfoundland.)

Office	Name	Date of First Appointment	Date of Present Appointment[1]
Premier and Minister of Economic Development	Hon. J. R. SMALLWOOD	Apr. 1, 1949	Apr. 1, 1949
Attorney General	Hon. L. R. CURTIS	Apr. 1, 1949	Apr. 1, 1949
Minister of Mines and Resources	Hon. W. J. KEOUGH	July 29, 1949	May 1, 1957
Minister of Labour	Hon. C. H. BALLAM	Apr. 4, 1950	Apr. 4, 1950
Minister of Public Welfare and Minister of Municipal Affairs and Supply	Hon. B. J. ABBOTT	May 1, 1957	May 1, 1957
Minister of Finance	Hon. E. S. SPENCER	July 29, 1949	May 1, 1957
Minister of Public Works	Hon. J. R. CHALKER	Apr. 4, 1950	May 1, 1957
Minister of Highways	Hon. F. W. ROWE	May 21, 1952	May 11, 1959
Minister without Portfolio	Hon. P. J. LEWIS	Dec. 15, 1951	Dec. 15, 1951
Minister of Provincial Affairs and Solicitor General	Hon. MYLES P. MURRAY	Dec. 15, 1951	Dec. 15, 1951 Apr. 10, 1955
Minister of Fisheries	Hon. J. T. CHEESEMAN	May 1, 1957	May 1, 1957
Minister of Health	Hon. J. M. McGRATH	July 5, 1956	Aug. 7, 1956
Minister of Education	Hon. G. A. FRECKER	Aug. 26, 1959	Aug. 26, 1959

[1] Minister not necessarily sworn in on date of appointment.

Subsection 2.—Prince Edward Island

The Government of Prince Edward Island consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Hon. F. W. Hyndman, Lieutenant-Governor at Jan. 1, 1961, was commissioned to office Mar. 31, 1958. Lieutenant-Governors from Confederation (1873) to 1959 are cited in the 1960 Year Book, p. 105.

The General Assembly elected Sept. 1, 1959 is the 49th in the history of Prince Edward Island Legislatures and the 24th since Confederation. It has 30 members from 15 electoral districts who serve for a statutory term of five years. One-half of the members of the Legislative Assembly are elected on a property vote. Each district elects one Councillor (elected on a property vote) and one Assembly member (elected on a general franchise vote). Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 105.

The annual salary of the Premier is $6,000 and that of a Cabinet Minister $4,000. Each member of the Assembly is paid $1,450 for each session attended by him and an additional $500 tax free as indemnity for expenses incurred. The Speaker is paid an additional $400 and a further additional $200 tax free as an indemnity. The Leader of the Opposition is paid an additional $800 and a further additional $200 tax free for expenses incurred by him in performance of official duties.

16.—Legislatures of Prince Edward Island, 1935-60, as at Jan. 1, 1961

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 75, and for 1924-35 in the 1938 edition, p. 110.

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution
July 23, 1935	18th	5	Sept. 25, 1935	Apr. 21, 1939

Minister of Welfare and Minister of Labour	Hon. HENRY W. WEDGE	Sept. 16, 1959	Sept. 16, 1959
Minister of Agriculture	Hon. ANDREW B. MACRAE	Sept. 16, 1960	Sept. 16, 1960

[1] Minister not necessarily sworn in on date of appointment.

Subsection 3.—Nova Scotia

The Government of Nova Scotia consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. Maj.-Gen. the Hon. E. C. Plow, Lieutenant-Governor at Jan. 1, 1961, was commissioned to office Sept. 1, 1958. Lieutenant-Governors since Confederation (1867) are cited in the 1960 Year Book, p. 106.

The Legislature has 43 members elected for a maximum term of five years. The Legislature elected June 7, 1960 was the 47th in Nova Scotia's history and the 24th since Confederation. Premiers since Confederation are listed in the 1960 Year Book, p. 107.

The Premier of the province receives a salary of $12,000 per annum and each Cabinet Minister a salary of $10,000 per annum. Each member of the House of Assembly receives a sessional indemnity of $3,200 and an allowance of $1,600 for expenses incidental to the discharge of his duties. The Leader of the Opposition receives an allowance of $6,000 in addition to his sessional indemnity.

18.—Legislatures of Nova Scotia, 1933-60, as at Jan. 1, 1961

Note.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 76, and for 1924–33 in the 1938 edition, p. 111.

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution
Aug. 22, 1933	17th	4	Mar. 1, 1934	May 20, 1937
June 29, 1937	18th	4	Mar. 1, 1938	Sept. 19, 1941
Oct. 28, 1941	19th	4	Feb. 19, 1942	Sept. 12, 1945
Oct. 23, 1945	20th	4	Mar. 14, 1946	Apr. 27, 1949
June 9, 1949	21st	4	Mar. 21, 1950	Apr. 14, 1953

Minister without Portfolio in charge of the Liquor Control Act	Hon. Donald M. Smith	Oct. 13, 1960	Oct. 13, 1960
Minister without Portfolio	Hon. George A. Burridge	Oct. 13, 1960	Oct. 13, 1960

[1] Minister not necessarily sworn in on date of appointment.

Subsection 4.—New Brunswick

The Government of New Brunswick has a Lieutenant-Governor, an Executive Council and a House of Assembly. The Hon. J. Leonard O'Brien, Lieutenant-Governor at Jan. 1, 1961, was commissioned to office June 6, 1958. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 108.

The Legislature elected June 27, 1960 is the 44th in New Brunswick's history and the 17th since Confederation. It has 52 members who are elected for a statutory term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 108.

The Premier receives $5,000 per annum in addition to the salary for any other portfolio he may hold. The salary of each Cabinet Minister is $7,500 and the amount paid as indemnity to each member of the House of Assembly is $2,400 plus an additional $1,200 allowance for expenses. The Leader of the Opposition receives an additional $3,000 and the Speaker receives an allowance of $1,000 in addition to the regular indemnity.

20.—Legislatures of New Brunswick, 1935-60, as at Jan. 1, 1961

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 77, and for 1924-35 in the 1938 edition, p. 112.

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution
June 27, 1935	11th	4	Mar. 5, 1936	Oct. 26, 1939

Chairman, New Brunswick Electric Power Commission	Hon. Donald Harper	July 12, 1960	July 12, 1960
Minister of Youth and Welfare	Hon. William R. Duffie	July 12, 1960	Nov. 30, 1960
Minister of Industry and Development	Hon. Michel Fournier	July 12, 1960	July 12, 1960

[1] Minister not necessarily sworn in on date of appointment.

Subsection 5.—Quebec

The Government of Quebec consists of a Lieutenant-Governor, an Executive Council and a bicameral legislature—the Legislative Council and the Legislative Assembly. The Hon. Onésime Gagnon, Lieutenant-Governor at Jan. 1, 1961, was commissioned to office Feb. 14, 1958. Lieutenant-Governors since Confederation (1867) are cited in the 1960 Year Book, p. 109.

The Legislative Council has 24 members nominated for life by the Lieutenant-Governor in Council. The Legislative Assembly has 95 elected members and, like the Legislative Council, has the power to bring forward Bills relating to civil and administrative matters and to the amendment or repeal of existing laws. A Bill to be approved by the Lieutenant-Governor must have received the assent of both Houses. Only the Legislative Assembly can bring forward a Bill requiring the expenditure of public money. The maximum life of a Legislature is five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 110.

22.—Legislatures of Quebec, 1935-60, as at Jan. 1, 1961

Note.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 78, and for 1924-35 in the 1938 edition, p. 113.

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution
Nov. 25, 1935	19th	1	Mar. 24, 1936	June 11, 1936

Subsection 6.—Ontario

The Government of Ontario consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. The Honourable Justice John Keiller Mackay, Lieutenant-Governor at Jan. 1, 1961, was commissioned to office Dec. 30, 1957. Lieutenant-Governors since Confederation (1867) are cited in the 1960 Year Book, p. 112.

The House of Assembly, the single-chamber Legislature of the province, is composed of 98 members elected for a statutory term of five years. Premiers since Confederation are listed in the 1960 Year Book, p. 112.

Besides the regular departments of government, the Niagara Parks Commission, the Ontario Municipal Board, The Hydro-Electric Power Commission of Ontario, the Ontario–St. Lawrence Development Commission, the Ontario Northland Transportation Commission, the Liquor Control Board, the Liquor Licence Board, the Hospital Services Commission and The Water Resources Commission have been created.

Under the provisions of the Legislative Assembly Act (RSO 1950, c. 202, and amendments) each member of the Assembly is paid an annual indemnity of $5,000 and an allowance of $2,000 for expenses. In addition, the Speaker receives a special indemnity at the annual rate of $3,000 and an expense allowance of $2,000; the Chairman of the Committee of the Whole a special indemnity at the annual rate of $2,000; and the Leader of the Opposition a salary of $12,000 per annum. Each member of the Cabinet having charge of a department receives the ordinary indemnity as a member of the Legislature in addition to his salary as a Minister of the Crown. The salary provided in the Executive Council Act for the Premier is $16,000 and for a Cabinet Minister having charge of a department $12,000. By the 1956 amendment, every Minister of the Crown in charge of a department, the Minister of the Crown who is a member of The Hydro-Electric Power Commission of Ontario, and the Leader of the Opposition receives a representation allowance of $2,000 per annum. Each Minister without Portfolio, other than the Minister who is a member of The Hydro-Electric Power Commission, receives $2,500 salary and $1,000 representation allowance per annum, by amendments in 1959 to the Executive Council Act and the Legislative Assembly Act, respectively.

25.—Legislatures of Ontario, 1934-60, as at Jan. 1, 1961

Note.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 79, and for 1924-34 in the 1938 edition, p. 114.

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution
June 19, 1934	19th	3	Feb. 20, 1935	Apr. 9, 1936
Oct. 6, 1937	20th	8	Dec. 1, 1937	June 30, 1943
Aug. 4, 1943	21st	2	Feb. 22, 1944	Mar. 24, 1945
June 4, 1945	22nd	4	July 16, 1945	Apr. 27, 1948
June 7, 1948	23rd	4	Feb. 10, 1949	Oct. 6, 1951
Nov. 22, 1951	24th	5	Feb. 21, 1952	May 2, 1955

Minister of Transport	Hon. Henry L. Rowntree	Nov. 21, 1960	Nov. 21, 1960
Minister without Portfolio	Hon. Allan Grossman	Nov. 21, 1960	Nov. 21, 1960
Minister without Portfolio	Hon. William A. Stewart	Nov. 21, 1960	Nov. 21, 1960

[1] Minister not necessarily sworn in on date of appointment.

Subsection 7.—Manitoba

In addition to a Lieutenant-Governor, Manitoba has an Executive Council at present composed of nine members and a Legislative Assembly of 57 members elected for a statutory term of five years. The Hon. Errick F. Willis, Lieutenant-Governor at Jan. 1, 1961, was sworn in on Jan. 15, 1960. Lieutenant-Governors from Confederation (1870) to 1959 are cited in the 1960 Year Book, p. 113. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 114.

The Premier of the province is paid a salary of $12,000 per annum and each of the other members of the Cabinet $10,000. Members of the Legislature are each paid a sessional indemnity of $2,667 and an expense allowance of $1,333. The Leader of the Opposition is paid an additional amount of $2,500 and the Speaker of the Legislature receives an amount double the indemnity and expense allowance of an individual member.

27.—Legislatures of Manitoba, 1936-60, as at Jan. 1, 1961

Note.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 80, and for 1924–36 in the 1938 edition, p. 115.

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution

May 14, 1959	26th	1	June 9, 1959	[1]

[1] Life of Legislature not expired at Jan. 1, 1961.

28.—Fifteenth Ministry of Manitoba, as at Jan. 1, 1961

(Party standing at latest General Election, May 14, 1959: 36 Progressive Conservative, 11 Liberal and 10 Co-operative Commonwealth Federation.)

Note.—Ministers are shown at date of original appointment as a Minister and at date of appointment to present portfolio, despite the formation of a new Ministry consequent upon the appointment of a new Premier.

Office	Name	Date of First Appointment	Date of Present Appointment[1]
Premier and Acting Provincial Treasurer	Hon. Dufferin Roblin	June 30, 1958	June 30, 1958
Minister of Public Works	Hon. Errick Willis	Nov. 2, 1940	Aug. 7, 1959
Minister of Industry and Commerce and Provincial Secretary	Hon. Gurney Evans	June 30, 1958	Aug. 7, 1959
Minister of Education	Hon. Stewart E. McLean	June 30, 1958	June 30, 1958
Attorney General and Acting Minister of Municipal Affairs	Hon. Sterling Lyon	June 30, 1958	June 30, 1958
Minister of Labour	Hon. John Thompson	June 30, 1958	June 30, 1958
Minister of Public Utilities and Acting Provincial Secretary	Hon. John Carroll	June 30, 1958	June 30, 1958
Minister of Agriculture and Conservation	Hon. George Hutton	Aug. 7, 1959	Aug. 7, 1959
Minister of Mines and Resources	Hon. Charles H. Witney	Aug. 7, 1959	Aug. 7, 1959

[1] Minister not necessarily sworn in on date of appointment.

Subsection 8.—Saskatchewan

The Government of Saskatchewan consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Hon. F. L. Bastedo, Lieutenant-Governor at Jan. 1, 1961, was commissioned to office Jan. 27, 1958. Lieutenant-Governors since Confederation (1905) are cited in the 1960 Year Book, p. 115.

The statutory number of members of the Legislative Assembly is 55, elected for a maximum term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 115.

The Premier receives $9,500 and each Cabinet Minister $8,000 annually in addition to a sessional indemnity. The Leader of the Opposition receives $5,000, the Speaker $2,500 and the Deputy Speaker $1,500. The sessional indemnity of a member of the Legislature is $3,200 together with an expense allowance of $1,600. Members for the three northernmost constituencies of Cumberland, Athabasca and Meadow Lake each receive a $3,500 sessional indemnity and a $1,750 expense allowance.

29.—Legislatures of Saskatchewan, 1934-60, as at Jan. 1, 1961

Note.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 81, and for 1924-34 in the 1938 edition, p. 116.

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution
June 19, 1934	8th	4	Nov. 15, 1934	May 14, 1938
June 8, 1938	9th	6	Jan. 19, 1939	May 10, 1944
June 15, 1944	10th	5	Oct. 19, 1944	May 19, 1948
June 24, 1948	11th	5	Feb. 10, 1949	May 7, 1952
June 11, 1952	12th	4	Feb. 12, 1953	Apr. 25, 1956
June 20, 1956	13th	4	Feb. 14, 1957	May 4, 1960
June 8, 1960	14th	[1]	[1]	[1]

[1] Legislature not yet in session at Jan. 1, 1961.

30.—Eighth Ministry of Saskatchewan, as at Jan. 1, 1961

(Party standing at latest General Election, June 8, 1960: 38 Co-operative Commonwealth Federation and 17 Liberal.)

Note.—Ministers are shown at date of original appointment as a Minister and at date of appointment to present portfolio, despite the formation of a new Ministry consequent upon the appointment of a new Premier.

Office	Name	Date of First Appointment	Date of Present Appointment[1]
Premier and President of the Council	Hon. T. C. Douglas	July 10, 1944	July 10, 1944
Provincial Treasurer	Hon. W. S. Lloyd	July 10, 1944	Aug. 1, 1960
Minister of Mineral Resources	Hon. J. H. Brockelbank	July 10, 1944	Apr. 1, 1953
Minister of Municipal Affairs	Hon. L. F. McIntosh	July 10, 1944	Aug. 4, 1948
Minister of Labour and Minister of Telephones	Hon. C. C. Williams	July 10, 1944	Nov. 13, 1944 July 27, 1956
Minister of Agriculture	Hon. I. C. Nollet	Jan. 8, 1946	Jan. 8, 1946
Minister of Natural Resources	Hon. A. G. Kuziak	Oct. 24, 1952	July 27, 1956
Attorney General and Provincial Secretary	Hon. R. A. Walker	July 27, 1956	July 27, 1956 Aug. 30, 1957
Minister of Industry and Information	Hon. R. Brown	July 27, 1956	Apr. 1, 1960
Minister of Public Health	Hon. J. W. Erb	July 27, 1956	July 27, 1956
Minister of Highways and Transportation	Hon. C. G. Willis	Aug. 31, 1956	Aug. 1, 1960
Minister of Social Welfare and Rehabilitation	Hon. A. M. Nicholson	July 11, 1960	July 11, 1960
Minister of Co-operation and Co-operative Development	Hon. O. A. Turnbull	July 11, 1960	July 11, 1960
Minister of Education	Hon. A. E. Blakeney	Aug. 1, 1960	Aug. 1, 1960
Minister of Public Works	Hon. W. G. Davies	Aug. 29, 1960	Aug. 29, 1960

[1] Minister not necessarily sworn in on date of appointment.

Subsection 9.—Alberta

The Government of Alberta is composed of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. There are 65 members in the Legislative Assembly, elected for a maximum period of five years. The Hon. J. Percy Page, Lieutenant-Governor at Jan. 1, 1961, was commissioned to office Dec. 19, 1959. Lieutenant-Governors since Confederation (1905) are listed in the 1960 Year Book, p. 116. Premiers since Confederation are listed in the same edition, p. 117.

Each member of the Legislative Assembly (except the Speaker and the Deputy Speaker) receives a sessional indemnity of $3,000 plus $1,500 expense allowance plus $15 for each day during the session when he is necessarily absent from his ordinary place of residence, both tax free. The Speaker's sessional indemnity is $4,750 plus $2,250 expense allowance and the Deputy Speaker's sessional indemnity is $4,000 plus $2,000 expense allowance. Each also receives $15 for each day during the session when he is necessarily absent from his ordinary place of residence. The Premier, in addition to the sessional indemnity, receives $14,000, other Ministers receive $11,000 and each member of the Opposition receives $625, there being no Opposition Leader in the present Legislature.

31.—Legislatures of Alberta, 1935-60, as at Jan. 1, 1961

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 82, and for 1924–34 in the 1938 edition, p. 117.

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution
Aug. 22, 1935	8th	9	Feb. 6, 1936	Feb. 16, 1940
Mar. 21, 1940	9th	4	Feb. 20, 1941	July 7, 1944
Aug. 8, 1944	10th	5	Feb. 22, 1945	July 16, 1948
Aug. 17, 1948	11th	5	Feb. 17, 1949	June 28, 1952
Aug. 5, 1952	12th	3	Feb. 19, 1953	May 12, 1955
June 29, 1955	13th	5	Aug. 17, 1955	May 9, 1959
June 18, 1959	14th	[1]	Feb. 11, 1960	[1]

[1] Life of Legislature not expired at Jan. 1, 1961.

32.—Eighth Ministry of Alberta, as at Jan. 1, 1961

(Party standing at latest General Election, June 18, 1959: 61 Social Credit, 1 Liberal, 1 Progressive Conservative, 1 Coalition and 1 Independent Social Credit.)

NOTE.—Ministers are shown at date of original appointment as a Minister and at date of appointment to present portfolio, despite the formation of a new Ministry consequent upon the appointment of a new Premier.

Office	Name	Date of First Appointment	Date of Present Appointment[1]
Premier, President of Council, Minister of Mines and Minerals, and Attorney General	Hon. ERNEST C. MANNING	Sept. 3, 1935	May 31, 1943 Sept. 16, 1952 Aug. 2, 1955
Minister of Municipal Affairs	Hon. ALFRED J. HOOKE	Apr. 20, 1945	Aug. 2, 1955
Minister of Highways	Hon. GORDON E. TAYLOR	Dec. 27, 1950	May 1, 1951
Minister of Education	Hon. ANDERS O. AALBORG	Sept. 9, 1952	Sept. 9, 1952
Minister of Agriculture	Hon. LEONARD C. HALMRAST	Jan. 3, 1953	Jan. 5, 1954
Minister of Lands and Forests	Hon. NORMAN A. WILLMORE	Nov. 10, 1953	Aug. 2, 1955
Minister of Public Welfare	Hon. ROBIN D. JORGENSON	Jan. 5, 1954	Jan. 5, 1954
Provincial Treasurer	Hon. EDGAR W. HINMAN	Dec. 23, 1954	Aug. 2, 1955
Minister of Public Works	Hon. JAMES HARTLEY	Aug. 2, 1955	Aug. 2, 1955
Minister without Portfolio	Hon. FRED. C. COLBORNE	Aug. 2, 1955	Aug. 2, 1955
Minister of Industry and Development and Provincial Secretary	Hon. A. RUSSELL PATRICK	Aug. 2, 1955	Sept. 1, 1959
Minister of Labour and Minister of Telephones	Hon. RAYMOND REIERSON	Aug. 2, 1955	Sept. 22, 1959
Minister of Health	Hon. DR. J. DONOVAN ROSS	Sept. 18, 1957	Sept. 18, 1957

[1] Minister not necessarily sworn in on date of appointment.

Subsection 10.—British Columbia

The Government of British Columbia has a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Maj.-Gen. the Hon. George Randolph Pearkes, Lieutenant-Governor at Jan. 1, 1961, was commissioned to office Oct. 13, 1960. Lieutenant-Governors from Confederation (1871) to 1959 are cited in the 1960 Year Book, p. 118.

The Legislative Assembly, elected for a statutory term of five years, has 52 members. Premiers since Confederation are listed in the 1960 Year Book, p. 118.

Each member of the Executive Council and the Legislative Assembly receives a sessional allowance of $3,400 and $1,000 for expenses. There is also paid to each member a living allowance of $15 for each day's attendance at the session and for each Saturday, Sunday or holiday that intervenes between two sittings of the House; the allowance of $15 in any session is not paid in respect of more than 40 days. Each member also receives an allowance of 25 cents per mile of the distance between his place of residence and the city of Victoria, reckoning such distance, going and coming, according to the nearest mail route. In addition, the Premier receives a salary of $15,000 and each member of the Executive Council $12,500. The Leader of the Opposition has a special allowance of $3,500 for expenses, the Speaker receives a special allowance of $3,500 and the Deputy Speaker an allowance of $1,000.

33.—Legislatures of British Columbia, 1937-60, as at Jan. 1, 1961

Note.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 83, and for 1924-37 in the 1938 edition, p. 118.

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution
June 1, 1937	19th	5	Oct. 26, 1937	July 22, 1941
Oct. 21, 1941	20th	4	Dec. 4, 1941	Aug. 31, 1945
Oct. 25, 1945	21st	5	Feb. 21, 1946	Apr. 16, 1949
June 15, 1949	22nd	4	Feb. 14, 1950	Apr. 10, 1952
June 12, 1952	23rd	1	Feb. 3, 1953	Mar. 27, 1953
June 9, 1953	24th	4	Sept. 15, 1953	Aug. 13, 1956
Sept. 19, 1956	25th	4	Feb. 7, 1957	Aug. 3, 1960
Sept. 12, 1960	26th	[1]	Jan. 26, 1961	[1]

[1] Life of Legislature not expired at Jan. 1, 1961.

34.—Twenty-Sixth Ministry of British Columbia, as at Jan. 1, 1961

(Party standing at latest General Election, Sept. 12, 1960: 32 Social Credit, 16 Co-operative Commonwealth Federation, and 4 Liberal.)

Note.—Ministers are shown at date of original appointment as a Minister and at date of appointment to present portfolio, despite the formation of a new Ministry consequent upon the appointment of a new Premier.

Office	Name	Date of First Appointment	Date of Present Appointment[1]
Premier, President of the Council and Minister of Finance.	Hon. William Andrew Cecil Bennett	Aug. 1, 1952	Feb. 15, 1954
Provincial Secretary, Minister of Municipal Affairs, and Minister of Social Welfare	Hon. Wesley Drewett Black	Aug. 1, 1952	Mar. 20, 1959
Attorney General and Minister of Industrial Development, Trade, and Commerce	Hon. Robert William Bonner	Aug. 1, 1952	Mar. 28, 1957
Minister of Lands and Forests	Hon. Ray Gillis Williston	Apr. 14, 1954	Feb. 28, 1956
Minister of Agriculture	Hon. Francis Xavier Richter	Nov. 28, 1960	Nov. 28, 1960
Minister of Mines and Petroleum Resources	Hon. William Kenneth Kiernan	Aug. 1, 1952	Mar. 18, 1960
Minister of Highways	Hon. Philip Arthur Gaglardi	Aug. 1, 1952	Mar. 15, 1955
Minister of Labour and Minister of Education	Hon. Leslie Raymond Peterson	Sept. 27, 1956	Nov. 28, 1960
Minister of Health Services and Hospital Insurance.	Hon. Eric Charles Fitzgerald Martin	Aug. 1, 1952	Mar. 20, 1959
Minister of Public Works	Hon. William Neelands Chant	Mar. 15, 1955	Mar. 15, 1955
Minister of Recreation and Conservation and Minister of Commercial Transport	Hon. Earle Cathers Westwood	Sept. 27, 1956	Nov. 28, 1960
Member of Executive Council without Portfolio	Hon. Buda Hosmer Brown	Nov. 28, 1960	Nov. 28, 1960

[1] Minister not necessarily sworn in on date of appointment.

Subsection 11.—Yukon and Northwest Territories

Yukon Territory.—The Yukon was created a separate Territory in June 1898. Provision is made for a local government administered by a Commissioner appointed by the Governor in Council. There is an elected Council. An amendment to the Yukon Act in 1960 provides for seven Councillors instead of the former five and a Territorial Ordinance passed at the Third Session 1960 provides for seven electoral districts. The first election under these laws will be held in 1961. The Commissioner administers the Government under instructions from the Governor in Council or the Minister of Northern Affairs and National Resources. The Commissioner in Council has power to make ordinances dealing with the imposition of local taxes, sale of liquor, preservation of game, establishment of territorial offices, maintenance of municipal institutions, issue of licences, incorporation of companies, solemnization of marriage, property and civil rights, and generally all matters of a local nature in the Territory. The seat of local government is at Whitehorse, Yukon Territory.

GOVERNMENT OF THE YUKON TERRITORY
(as at Jan. 1, 1961)

(At Jan. 1, 1961 the Government consisted of an appointed Commissioner and a Council of five members elected in 1958 for a three-year term; the first election of the seven-member Council will be held in 1961.)

Commissioner	F. H. Collins
Members of Council—	
Dawson	G. Shaw
Carmacks-Kluane	G. Livesey
Whitehorse West	J. Smith
Mayo	R. L. McKamey
Whitehorse North	Vacant
Whitehorse East	C. D. Taylor
Watson Lake	Vacant
Officers of Council—	
Clerk	H. J. Taylor
Legal Adviser	F. R. Bickell

The Northern Administration Branch, Department of Northern Affairs and National Resources, has the responsibility for the general administration of the natural resources of the Yukon Territory, except game. The Department maintains three lands and mining offices at various points in the Territory. Other departments and agencies of the Federal Government, including the Department of Justice, the Royal Canadian Mounted Police, the Departments of National Defence, Citizenship and Immigration, Mines and Technical Surveys, National Revenue, Transport, Post Office, Agriculture, Fisheries, Public Works and the Unemployment Insurance Commission, also maintain offices in the Yukon Territory.*

Northwest Territories.—As reconstituted on Sept. 1, 1905, these comprise:—

(1) all that part of Canada north of the Sixtieth Parallel of North Latitude, except the portions thereof within the Yukon Territory and the Provinces of Quebec and Newfoundland, and

(2) the islands in Hudson Bay, James Bay and Ungava Bay, except those islands within the Provinces of Manitoba, Ontario and Quebec.

---

* Further information on officials of various Federal Government departments serving Yukon Territory may be obtained from the Director, Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa.

The Northwest Territories Act (RSC 1952, c. 331) provides for the appointment of a Commissioner to administer the government of the Territories under instructions given from time to time by the Governor in Council or the Minister of Northern Affairs and National Resources. As a matter of practice, the appointment is held by the Deputy Minister of Northern Affairs and National Resources. For administrative purposes the Territories are divided into the provisional districts of Mackenzie, Keewatin and Franklin (Order in Council dated Mar. 16, 1918). The Northwest Territories Act, as amended, also provides for a Council of nine members, four of whom are elected in the Mackenzie District and five of whom are appointed by the Governor in Council. The Commissioner in Council has legislative powers respecting such matters as direct taxation, establishment and tenure of Territorial offices, municipal institutions, controverted elections, licences, incorporation of companies, property and civil rights, administration of justice, game, education, hospitals and generally all matters of a local or private nature. The Council meets once each year in the Territories and at least once each year in Ottawa, which is the seat of government. The resources, except game, remain under the control of the Federal Government. The administration of legislation passed by the Commissioner in Council and the management of resources under federal legislation are carried on by the Northern Administration Branch of the Department of Northern Affairs and National Resources. Administrative offices are located in the Territories at Fort Smith, Yellowknife, Hay River and Inuvik.

COUNCIL OF THE NORTHWEST TERRITORIES
(as at Jan. 12, 1961)

Commissioner	R. G. Robertson
Deputy Commissioner	W. G. Brown
Members of the Council—	
Appointed	L. A. Desrochers, H. M. Jones, W. G. Brown, D. M. Coolican and I. Norman Smith
Elected	K. Lang, J. W. Goodall, A. P. Carey, E. J. Gall
Officers of the Council—	
Secretary	G. A. MacKinnon
Legal Adviser	E. R. Olson

Section 3.—Municipal Government*

Municipal government in Canada is placed under the control of the provincial legislatures by the British North America Act, 1867. Thus the powers of municipalities are those delegated to them by statutes passed by their respective provincial governments, some of which apply to all municipalities within the province, some to a certain type or group, and many to one municipality only. Municipal powers are further defined by regulations issued (under the provisions of the Acts) by the provincial government departments charged with their supervision and control. In the Yukon and Northwest Territories some municipal powers have been assigned to certain localities by the Federal Government and the territorial councils.

While powers and responsibilities delegated to municipalities vary from province to province and even within a province, they are largely those of raising money locally, of borrowing, and of spending to provide local services. All provinces give financial assistance in some form, usually as subsidies or grants-in-aid of certain services administered by the municipalities, and often as loans on or guarantees of loans for capital projects. Retention or assumption of what are often regarded as municipal responsibilities is sometimes considered an indirect form of aid, as is the extension of taxing privileges into what may be commonly regarded as a provincial revenue field.

---

* Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

The major revenue source available to municipalities is property taxation. It is supplemented in varying degrees by taxation of personal property, business, persons (poll taxes), and tenants. In two provinces municipalities may levy an amusement tax, in three they may impose sales taxes on a limited basis, and in Quebec some cities have been granted the right to levy a general sales tax. Miscellaneous general revenue is derived from licences, permits, rents, concessions, franchises and fines. Most urban municipalities of any size operate utilities and enterprises for the provision of water and, in many instances, electricity, gas, transportation, telephone and other services. These sometimes provide surplus funds that may become available to help provide other municipal services. On the other hand, expenditures of municipalities often include provision for the deficits of utilities and enterprises.

In differing degree and with varying provincial assistance, municipalities are responsible for the following services: protection to persons and property through police and fire forces, courts and local gaols, and inspection services; roads and streets; sanitation; certain health and welfare services; and some recreation and other community services. Except in Quebec and Newfoundland and in a few minor localities where school authorities must raise funds for education not provided for by the province concerned, municipalities are responsible for levying and collecting local education taxes on property on behalf of the local schools, and often for borrowing capital funds for school construction. This stems from the traditional concept that education is a local responsibility, though it is now largely financed and administered by the provincial governments. Local administrative responsibility for education lies with boards of trustees separate from the councils that govern municipalities (except in Alberta; see p. 93).

In some localities, certain local services are administered by special district authorities encompassing a number of municipalities or parts of municipalities. These district authorities provide services, such as greater water and sewerage districts, drainage and irrigation districts, and health units, which elsewhere may be provided by the municipality directly or through a board or utility. They are, in effect, co-operative efforts or a modified form of metropolitan government. Metropolitan government is in existence in Toronto and partially in Montreal, and studies are under way for some other major cities, notably Winnipeg.

The following paragraphs describe municipal organization in each province as at Jan. 1, 1960. In Table **35**, which gives the number of each type of municipality in each province, all fully incorporated cities, towns and villages are regarded as urban municipalities. It is difficult to apply arbitrary definitions, such as that which classifies as urban centres all places having a population of 1,000 or more persons.

Newfoundland.—The Province of Newfoundland has two cities—St. John's and Corner Brook. A number of the province's many settlements have been organized into 33 towns, four rural districts, three local improvement districts and 35 local government communities. The towns, rural districts and local improvement districts operate under the Local Government Act; towns and rural districts have elected councils and local improvement districts have appointed trustees. Local government communities established under the Community Councils Act in the smaller settlements have limited powers and functions. There are no rural municipalities in the usual sense. Thus, between 40 p.c. and 50 p.c. of the population of the province is now organized in some form of local authority but only about one-fifth of 1 p.c. of the total area is so governed. Municipalities are supervised by the Department of Municipal Affairs and Supply.

Prince Edward Island.—In this island province, one city and seven towns have been incorporated under special Acts and 16 villages have been established under the Village Services Act. There is no municipal organization for the remainder of the province though it is divided into school sections.

Nova Scotia.—Municipal organization in Nova Scotia covers the whole of the province. The two cities, Halifax and Sydney, operate under special charters and special legislation. Forty towns operate under the Town Incorporation Act but there are no municipalities incorporated as villages. Cities and towns are independent of counties. The rural area is divided into 18 counties which, in themselves, do not represent units of local government. However, 12 of these counties each comprise one municipality and the other six each comprise two municipalities, making a total of 24 rural municipalities. Supervision of municipalities is exercised through the Department of Municipal Affairs.

New Brunswick.—This province is divided into 15 counties which are incorporated municipalities and have direct powers of local self-government as rural municipalities, though certain of their powers often apply in both rural and urban municipalities. The six cities have special charters, and the 20 towns operate under the Towns Incorporation Act. There is one village and 54 local improvement district areas within the counties but outside the cities, towns and villages; these have been incorporated for the provision of limited municipal services. The Department of Municipal Affairs exercises supervision.

Quebec.—Municipal divisions in Quebec embrace the more thickly settled areas comprising about one-third of the province and the remainder is governed by the province as "territories". The organized area is divided into 74 county municipalities which are divided again into local municipalities and designated as village, township or parish municipalities or simply as municipalities. The counties as such have no direct powers of taxation. Funds to finance the services falling within their jurisdiction are provided by the municipalities forming part thereof. Parts of some counties are not yet organized into incorporated units of local government, being in outlying areas with little or no population. There are 336 villages and 1,120 townships and parishes. A small number of these are independent of the counties in which they are located. The Municipal Code governs local municipalities, and the 54 cities and 162 towns have special Acts. The supervision and assistance of municipalities is through the Department of Municipal Affairs and the Quebec Municipal Commission. Municipal statistics are gathered by the Quebec Bureau of Statistics.

Functions of the Montreal Metropolitan Commission, established in 1921 to assist municipalities of greater Montreal which had experienced some degree of financial difficulty, were transferred at the end of 1959 to the Montreal Metropolitan Corporation; it is intended that, eventually, the Corporation will take on more of the functions of an over-all metropolitan administration.

The County of Laval was replaced in March 1959 by the Interurban Corporation of Île Jésus in order to facilitate solution of inter-municipal problems on the island.

Ontario.—Slightly more than one-tenth of the area of Ontario is municipally organized and the remainder is governed entirely by the provincial government. The older settled section of the province is divided into 43 counties, five of which are united with others for administrative purposes. Each county, although it is an incorporated municipality, is comprised of the towns, villages and townships situated within its borders, and these provide its revenue. The Municipality of Metropolitan Toronto encompasses one city, four towns, three villages and five townships. There are 30 cities, 158 towns, 154 villages, 575 townships and 20 improvement districts in the province. Some of each are located in the northern districts which are not organized into counties. Supervisory control of municipalities is exercised by the Department of Municipal Affairs and the Ontario Municipal Board under the Municipal Act and other Acts governing aspects of municipal government.

Manitoba.—Manitoba has six cities, which derive their powers from special Acts and do not come under the supervision of the Department of Municipal Affairs. The Department supervises the 35 towns, 37 villages and 112 rural municipalities under the Municipal Act. There are local government districts in settled areas not within rural municipalities.

Saskatchewan.—All municipalities in Saskatchewan derive their powers from general Acts that are designated with the name of the type of municipality. There are 10 cities, 106 towns, 371 villages and 296 rural municipalities. The area so organized consists of most of the southern two-fifths of the province—the remainder of this portion is administered for local purposes by the province in unincorporated local improvement districts. The northern three-fifths is sparsely populated and without local government, though some municipal services are provided by the province through operation of the Northern Administrative Area. Municipalities are supervised by the Department of Municipal Affairs.

Alberta.—The province has an Act applying to each type of municipality, and under these Acts the Department of Municipal Affairs supervises the 10 cities, 87 towns, 157 villages, 36 municipal districts and 12 counties. The latter administer schools as well as municipal services.

British Columbia.—Less than one-half of 1 p.c. of the area of British Columbia is organized into municipalities. Additional small areas have sufficient population to require administration of local activities by the provincial government. There are 32 cities, three towns, 57 villages, and 31 districts; the latter are chiefly rural municipalities, except for those adjacent to the principal cities of Victoria and Vancouver which are largely urban in character. It should be emphasized, however, that the application of the name "city" is somewhat different from the commonly accepted meaning, in that several of them have populations of fewer than 1,000 and perhaps one-half or more would not normally be incorporated as cities in another province. Legislation of 1957 provided for the incorporation of towns; by the beginning of 1959 three villages had attained town status and three cities had reverted to village status. Municipalities are supervised by the Department of Municipal Affairs.

Yukon and Northwest Territories.—There are two cities and one town in the Yukon Territory and two local administrative districts in the Northwest Territories, all of which provide some municipal services to their local areas. These are not shown in Table **35**.

[1] Municipalities grouped according to their official nomenclature, which is roughly indicative of size and nature (see footnote 6). [2] Municipalities grouped under the classification devised by the Dominion-Provincial Conferences on Municipal Statistics, designed to bring municipalities into comparable groups for statistical presentation. [3] Excludes local improvement districts. [4] Designated by the province as towns (33), rural district (4), and local improvement districts (3); all operate under the same Act. [5] Classified by the province as "community councils". [6] Rural municipalities are designated by different names in the different provinces. [7] Includes 20 improvement districts. [8] Includes 3 units of self-government known as "Suburban municipalities"; excludes local government districts. [9] Excludes 12 local improvement districts. [10] Includes 12 county municipalities; excludes improvement districts and special areas. [11] Excludes 2 local districts. [12] Includes the Interurban Corporation of Île Jésus. [13] Includes municipalities shown wholly or partly in metropolitan areas by the 1956 Census, up-dated to take care of annexations, etc. [14] Includes the Montreal Metropolitan Corporation and the Municipality of Metropolitan Toronto. [15] Classed by provincial authorities as suburban and semi-urban.

Section 4.—Federal and Provincial Royal Commissions

Federal Royal Commissions Established.—Royal Commissions established from Jan. 1, 1960 to Jan. 1, 1961 under Part I of the Federal Inquiries Act are given here in continuation of those previously reported in the Year Books beginning with the 1940 edition, pp. 1108-1110. Any Commissions established between Jan. 1, 1961 and the date of going to press will be found in an Appendix to this volume.

Nature of Commission	*Commissioner*	*Date Established*
To inquire into the situation of and prospects for the industries in Canada producing motor vehicles and parts therefor.	VINCENT W. BLADEN	Aug. 2, 1960
To inquire into complaints received concerning certain activities of Station CHEK-TV, B.C.	ANDREW STEWART	Sept. 6, 1960
To inquire into and report upon the means of promoting efficiency, economy and improved service in the operation of the departments and agencies of the government.	J. GRANT GLASSCO	Sept. 16, 1960
To inquire into and report upon the recent and present position of and prospects for Canadian magazines and other periodicals.	M. GRATTAN O'LEARY	Sept. 16, 1960

Reports of Federal Royal Commissions.—Reports of federal Royal Commissions issued during the year 1960 were as follows.

Royal Commission on Patents, Copyrights and Industrial Designs, established June 10, 1954: Report on patents of invention, Dec. 31, 1959. Ottawa 1960. 196p. $2. (Cat. No. Z1-1954/2).

Royal Commission on Energy, established Oct. 15, 1957: Second Report, July 1959. Ottawa 1960. 189 p. $2. (Cat. No. Z1-1957/3-2).

Royal Commission on Price Spreads of Food Products, established Dec. 10, 1957: Vol. 3, March 1960 Ottawa 1960. 565p. $2. (Cat. No. Z1-1957/4-3).

Royal Commission on the Great Slave Lake Railway, established June 4, 1959: Vol. 1—Introduction, reports of Commissioners, June 1960. Ottawa 1960. 113p. $1.50. (Cat. No. Z1-1959/1-1).

Royal Commission on Coal, established Oct. 6, 1959: Report, Ottawa, August 1960. 127p. $2. (Cat. No. Z1-1959/2).

Royal Commission on the Great Slave Lake Railway, established June 4, 1959: Vol. 2—Factual and statistical material, July 1960. Ottawa 1960. 197p. $2. (Cat. No. Z1-1959/1-2).

Provincial Royal Commissions.—The following provincial Royal Commissions were established during the year 1960.

Province and Nature of Commission	*Commissioner or Chairman*	*Date Established*
NEWFOUNDLAND		
To inquire into the logging industry	Hon. Sir B. E. S. DUNFIELD	Aug. 25, 1960
NEW BRUNSWICK		
To inquire into the liquor laws of the province.	Mr. Justice G. F. C. BRIDGES	Nov. 30, 1960
QUEBEC		
To make an inquiry upon the facts and circumstances which preceded and followed the sale of Quebec Hydro gas network to the Corporation of Natural Gas of Quebec.	His Hon. Judge ELIE SALVAS	Oct. 5, 1960
ONTARIO		
To inquire into the purchase and acquisition by The Hydro-Electric Power Commission of Ontario of certain lands within the Sarnia Indian Reserve Number 45 from Dimensional Investments Limited.	Mr. Justice GEORGE ARGO MCGILLIVRAY	Feb. 23, 1960
To inquire into and report upon all statutes and regulations administered by the Department of Labour that govern the safety of workers with a view to the improvement, simplification, clarification and modernization of such statutes and regulations.	His Hon. Judge P. J. MCANDREW	Apr. 7, 1960
To inquire into and report upon all matters relating to the purchase by the Niagara Parks Commission of parts of Lot 23, Township of Niagara, County of Lincoln, and the sale of part of said lands to Arthur Albert Schmon, and the subsequent sale of a part of said lands by Mr. Schmon to Charles and Leola Daley.	His Hon. IAN MCLEAN MACDONELL	Apr. 11, 1960
MANITOBA		
To inquire into judicial boundaries	The Hon. Mr. Justice CALVERT CHARLTON MILLER	July 21, 1960
To inquire into all facts and matters respecting the provision of surgical and medical care to recipients of social allowances and its effect upon the teaching of medical students in Manitoba.	HAROLD J. RILEY	Oct. 13, 1960
BRITISH COLUMBIA		
Committee advisory to the Executive Council on the general subject of energy, its development and application to the requirements of the people and industry of British Columbia (named the British Columbia Energy Board).	GORDON MERRITT SHRUM	Jan. 11, 1960

PART III.—ADMINISTRATIVE FUNCTIONS OF THE FEDERAL GOVERNMENT*

A special article presenting information on the administration and control of the financial affairs of the Federal Government appears in the 1956 Year Book at pp. 101-107.

Section 1.—Departments, Boards, Commissions, etc.

The following paragraphs indicate the functions of the various departments of government and the special boards and commissions in connection with the work of government.

Though it is not possible, owing to the limitations of space, to enumerate in this Section the details of each service or the divisions or sections of all departments, the main branches are given along with those services that differ in some quality from the larger class of subjects handled by a department. The work of many of these departments and boards is given in detail in later Chapters of this volume. The Index will be useful in locating required information.

Department of Agriculture.—This Department was established in 1867 (SC 1868, c. 53) and undertakes work on all phases of agriculture. Research and experimentation are carried out by the Research Branch; the maintenance of standards and protection of products by the Production and Marketing Branch; reclamation and development by the Prairie Farm Rehabilitation Administration and the Maritime Marshland Rehabilitation Administration; security and price stability policies are administered under the Prairie Farm Assistance Administration and Agricultural Stabilization Board. The Farm Credit Corporation, the Canadian Wheat Board and the Board of Grain Commissioners are responsible to Parliament through the Minister of Agriculture.

Air Transport Board.—The Air Transport Board was established in 1944 by amendment of the Aeronautics Act. The Board is responsible for the economic regulation of commercial air services in Canada. The regulatory function relates to Canadian air services within Canada and abroad, and to foreign air services operating into Canada. It involves the licensing of all such services and the subsequent regulation of the licensees in respect of their economic operation and the provision of service to the public. The Board reports to Parliament through the Minister of Transport.

Auditor General's Office.—This Office originated in 1878 (SC 1878, c. 7) and currently functions under the Financial Administration Act (RSC 1952, c. 116). The Auditor General is responsible for examining accounts relating to the Consolidated Revenue Fund and to public property, and for reporting annually to the House of Commons the results of his examinations. He also audits the accounts of various Crown corporations and other instrumentalities.

Board of Broadcast Governors.—This Board was established pursuant to the Broadcasting Act assented to on Sept. 6, 1958 and is responsible for the regulation of radio and television broadcasting in Canada. This regulatory function includes the establishment and operations of networks of broadcasting stations, the activities of public and private broadcasting stations in Canada and the relationship between them. Applications for licences to establish new broadcasting stations and for changes in conditions of existing licences or changes in the ownership or share structure of licensees are referred to the Board by the Department of Transport for a recommendation to the Minister of Transport. The Board consists of three full-time members and twelve part-time members and reports to Parliament through the Minister of National Revenue.

Board of Grain Commissioners.—Constituted in 1912 under the Canada Grain Act, now the Canada Grain Act, 1930 (RSC 1952, c. 25), the Board of Grain Commissioners provides general supervision over grain handling in Canada by licensing elevator operators, inspecting and weighing grain en route to and shipped from terminal elevators, and other services. The Board, comprising a Chief Commissioner and two Commissioners, has authority to inquire into any matter relating to the grading and weighing of grain, deductions for dockage or shrinkage, deterioration of any grain during storage or treatment, unfair or discriminatory operation of a grain elevator, etc. The Board publishes its regulations in the *Canada Gazette* and reports to Parliament through the Minister of Agriculture.

Board of Transport Commissioners.—The powers of this Board, which was organized as the Board of Railway Commissioners in 1904, have been extended from time to time until today it has regulatory and judicial functions dealing with almost all aspects of railway activity including

uding civil defence. On September 1, 1959, the Departments of
Velfare and Justice became responsible for specific civil de-
cy Measures Organization for the residue.

August 1961

location, construction and operation of lines, rates and charges. It is also entrusted with the regulation of other transportation and communication agencies, including express companies, telegraph companies, telephone companies other than those provincially or municipally controlled, international bridges and tunnels and inland shipping. The Board reports to Parliament through the Minister of Transport.

Canadian Government Specifications Board.—This is an interdepartmental body composed of the Deputy Heads of 24 Federal Government departments and agencies. The Board operates under the auspices of the National Research Council, through the medium of committees in which government and industry co-operate on a voluntary basis. The Board prepares specifications in commodity fields and for materials, processes and equipment required by government agencies, and arranges for necessary testing and research. An Index of Specifications is available on request to the CGSB Secretary, National Research Council, Ottawa.

Chief Electoral Office.—This Office was established in 1920 under the provisions of the Dominion Elections Act, now the Canada Elections Act (RSC 1952, c. 23), and amendments thereto, and is responsible for the conduct of all federal elections as well as the elections of members of the Northwest Territories Council and of the Yukon Territory Council. In addition it conducts any vote taken under the Canada Temperance Act. The Chief Electoral Officer reports to Parliament through the Secretary of State.

Department of Citizenship and Immigration.—This Department was constituted in December 1949 (RSC 1952, c. 67) and came into existence on Jan. 18, 1950 under the Minister of Citizenship and Immigration. Most departmental work is carried on through four branches. The Canadian Citizenship Branch assists governmental and non-governmental agencies engaged or interested in facilitating the adjustment and integration of newcomers and in making Canadians conscious of their privileges and responsibilities as citizens. The Canadian Citizenship Registration Branch administers the Canadian Citizenship Act and is the custodian of all records under that Act and all Naturalization Acts previously in force. The Immigration Branch administers the Immigration Act and Regulations and is responsible for the selection, examination and movement of immigrants, the exclusion or deportation of undesirables and the settlement or establishment of immigrants in Canada. The activities of the Indian Affairs Branch include management of all Indian affairs. Its organization consists of a headquarters office at Ottawa, a regional supervisory staff, and 89 local agencies in the field.

The Minister of Citizenship and Immigration is responsible to Parliament for the National Film Board, the National Library, the Public Archives, and the National Gallery of Canada.

Civil Service Commission.—The Civil Service Commission of Canada dates from the Civil Service Act of 1908. Under this Act the Commission was given the responsibility of applying, wherever possible, the principle of appointment by merit in filling permanent positions within departmental headquarters positions at Ottawa, termed the 'inside service'.

The Civil Service Act, 1918 extended the competitive system of appointments to cover the outside as well as the inside service and temporary as well as permanent appointments. It made the Commission responsible for establishing a system of organization and classification that would secure uniformity in the staffing of the various departments and in the salaries paid for work of equal levels of difficulty and responsibility.

The jurisdiction of the Commission now extends to all departments of the Federal Government and to a large number of boards and commissions, exclusive of Crown corporations.

The Civil Service Commission, which is responsible not to the executive government but only to Parliament, consists of three members, one of whom serves as chairman. Each member of the Commission is appointed by the Governor in Council for a term of ten years and each has the rank and standing of a Deputy Minister. The Commission has a staff of approximately 660 persons located in the headquarters office at Ottawa and in district offices at St. John's, Nfld., Halifax, N.S., Saint John, N.B., Montreal, Que., Toronto, Ont., Winnipeg, Man., Regina, Sask., Edmonton, Alta., and Vancouver, B.C.

Department of Defence Production.—This Department was established on Apr. 1, 1951 under the provisions of the Defence Production Act (RSC 1952, c. 62, as amended). Under this Act the Minister is given, with certain exceptions, authority to buy defence supplies and construct defence projects required by the Department of National Defence. The Minister may, if authorized by the Governor General in Council, undertake for an associated government anything he may undertake for the Canadian Government. In addition, all powers, duties and functions that theretofore were vested in the Minister of Trade and Commerce under any contract, agreement, lease or other writing entered into pursuant to the Department of Munitions and Supply Act, 1939, or the Defence Supplies Act, 1950, are vested in the Minister of Defence Production.

Broadly, the Department's functions are to procure military goods, to construct defence installations and to organize industry for defence as required on behalf of the Department of National Defence, other government departments, and associated governments; to promote the expansion of defence production facilities and the development of defence-supporting industries particularly of strategic resources important for the defence of Canada and its allies; and to ensure adequate supplies of essential materials and services for defence requirements. The main procurement units of the Department are five production branches—Aircraft, Armament, Electronics, Machine Tool and Shipbuilding—and a General Purchasing Branch. Major offices for foreign procurement are located at London, England, and Washington, U.S.A.; the General Purchasing Branch has 14 district purchasing offices located throughout Canada for local or urgent procurement. In addition, there are various service branches which include Administration, Comptroller's, Economics and Statistics, Financial Adviser's, Industrial Security, Legal, and Secretary's. An Emergency Supply Planning Branch has been established to plan economic controls for a national emergency.

The following Crown companies report to Parliament through the Minister of Defence Production: Canadian Arsenals Limited, Canadian Commercial Corporation, Crown Assets Disposal Corporation, Defence Construction (1951) Limited, and Polymer Corporation Limited.

Dominion Bureau of Statistics.—The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (SC 1918, c. 43). In 1948 this statute, which had been consolidated as the Statistics Act (RSC 1927, c. 190), was repealed and replaced by the Statistics Act (RSC 1952, c. 257); it was amended by SC 1952-53, c. 18, assented to Mar. 31, 1953.

The function of the Dominion Bureau of Statistics is to compile, analyse and publish statistical information relative to the commercial, industrial, financial, social and general condition of the people and to conduct a census of population and agriculture of Canada as required under the Act.

The Bureau is a major publication agency of the Federal Government; the subjects of its reports cover all aspects of the national economy. The administrative head of the Bureau is the Dominion Statistician who reports to Parliament through the Minister of Trade and Commerce.

Emergency Measures Organization.—This Organization is a section of the Privy Council Office, established in June 1957 for the purpose of co-ordinating civil emergency planning. On Sept. 1, 1959, the Departments of National Defence, Health and Welfare, and Justice became responsible for specific civil defence functions; the Emergency Measures Organization for all other aspects of planning civil emergency measures. The Organization is responsible, through the Secretary of the Cabinet, to the Prime Minister.

Department of External Affairs.—This Department was established in 1909 by "An Act to create a Department of External Affairs" (RSC 1952, c. 68). Its main function is the protection and advancement of Canadian interests abroad. The head of the Department of External Affairs is the Secretary of State for External Affairs. The senior permanent officer of the Department is the Under-Secretary (Deputy Minister) who is the chief adviser to the Secretary of State for External Affairs. He is assisted by a Deputy Under-Secretary who is Legal Adviser and by four Assistant Under-Secretaries, and is advised by officers in charge of the various divisions, each responsible for a part of the work of the Department. The divisional heads are assisted by Foreign Service Officers, Administrative Officers and by an administrative staff. Officers serving abroad are formally designated as High Commissioners, Ambassadors, Ministers, Counsellors, First, Second, Third Secretaries and Attachés at diplomatic posts and as Consuls General, Consuls and Vice-Consuls at consular posts. About 65 diplomatic and consular posts are maintained abroad.

The work of the Department at Ottawa is performed by 20 divisions, which may be grouped according to their functions into three categories—area, functional and administrative. There are six area divisions—Commonwealth, European, Latin American, African and Middle Eastern, Far Eastern, and United States; ten functional divisions—Communications, Consular, Defence Liaison (1) and (2), Economic, Information, Legal, Historical, Protocol and United Nations; and four administrative divisions—Administrative Services, Finance, Personnel, and Supplies and Properties. There are also two smaller sections—Inspection Service and Liaison Services.

Department of Finance.—This Department was created by Act of Parliament in 1869 and now operates under the Financial Administration Act (RSC 1952, c. 116). The Department is responsible for the financial administration of Canada including raising the money required for the various governmental activities by way of taxation or borrowing. The Comptroller of the Treasury, an officer of the Department, is responsible for all Government disbursements. The work of the Department is organized in six principal divisions: Administration, Economic and International Affairs, Federal-Provincial Relations, Farm Improvement Loans, Taxation, and Treasury Board. The Royal Canadian Mint is a branch of the Department and the Inspector General of Banks is an officer of the Department.

The Tariff Board is responsible to Parliament through the Minister of Finance.

Department of Fisheries.—The Department of Fisheries was first organized under a Minister of Fisheries in 1930. Prior to that date the federal fisheries services were maintained by the former Department of Marine and Fisheries, established in 1868. The provinces, under various arrangements, have certain administrative responsibilities in the fisheries but the legislative authority for the regulations of coastal and freshwater fisheries is with the federal Department of Fisheries.

The work of the Department includes: conservation and development of the fisheries through the enforcement of fishing regulations, the operation of fish culture establishments, management and improvement of spawning streams and control of predators; inspection of fish products for quality control and the encouragement of industrial development; promotion of the greatest utilization of fishery products and a proper public understanding of the resource and the industry. The Department administers the Fishermen's Indemnity Plan to assist fishermen in the event of loss or serious damage to their fishing vessels or lobster traps.

Agencies connected with the Department are the Fisheries Prices Support Board and the Fisheries Research Board of Canada. The Department is represented on the following international commissions: Pacific Salmon Fisheries, Pacific Halibut, the Northwest Atlantic Fisheries, North Pacific Fisheries, Whaling, Great Lakes Fishery, and North Pacific Fur Seal.

Fisheries Research Board.—The Fisheries Research Board operates under the Fisheries Research Board Act of 1937 (amended in 1947 and 1952-53). It has been active as a fisheries research body since 1898, first as the Board of Management of the Canadian Marine Biological Station and later (1912) as the Biological Board of Canada.

The Board operates under the Minister of Fisheries and membership consists of a full-time chairman and not more than 18 other members. The majority of Board members are scientists, and other members are representative of the fishing industry and the Department of Fisheries.

The Board operates four biological stations and an Arctic Unit across Canada, also three technological stations with two technological application units and two oceanographic groups. It serves as the scientific arm of the Department of Fisheries and its principal objective is to increase the scope and value of Canadian fisheries through scientific research.

Department of Forestry.—The Department of Forestry was established in October 1960. It brings together the former Forestry Branch of the Department of Northern Affairs and National Resources and the Forest Biology Division of the Research Branch of the Department of Agriculture. The Department conducts comprehensive programs of research relating to forestry and the utilization of forest products, and carries out economic studies relating to forest resources and the forest industries. It provides information regarding forestry and the forest industries and promotes public interest in the proper management, protection and use of the forest resources. Financial assistance is offered to the provinces under agreements authorized by the Governor in Council in order to expedite progress in specific forestry programs. It carries out forest surveys and provides technical advice and assistance to other agencies of the Federal Government which are responsible for the administration of forest lands. The Department co-operates with international organizations concerned with forestry and in which Canada maintains membership, and the Minister of Forestry reports to Parliament for the Eastern Rockies Forest Conservation Board.

Department of Insurance.—The Minister of Finance is responsible for the Department of Insurance which originated in 1875 as a branch of the Department of Finance but was constituted a separate Department in 1910. It is authorized and governed by the Department of Insurance Act (RSC 1952, c. 70). Under the Superintendent of Insurance, the Department administers the statutes of Canada applicable to: insurance, trust and loan companies incorporated by the Parliament of Canada; provincially incorporated insurance companies registered with the Department; British and foreign insurance companies operating in Canada; small loans companies and money-lenders; co-operative credit societies registered under the Co-operative Credit Associations Act; and Civil Service insurance.

Under the relevant provincial statutes the Department examines provincial trust companies in the Provinces of Manitoba and New Brunswick and loan and trust companies in the Province of Nova Scotia.

International Joint Commission.—This Commission was established under a Great Britain–United States treaty, Jan. 11, 1909, ratified by Canada in 1911. The Commission, composed of six members (three appointed by the President of the United States and three by the Government of Canada) is governed by five specific Articles of the Boundary Waters Treaty of 1909. The Commission's approval is required for any use, obstruction or diversion of boundary waters affecting the natural level or flow of boundary waters in the other country; and for any works in waters flowing from boundary waters or below the boundary in rivers flowing across the boundary which raise the natural level of waters on the other side of the boundary.

Problems arising along the common frontier are also referred to the Commission by either country for examination and report, such report to contain appropriate conclusions and recommendations. In addition, questions or matters of difference between the two countries may be referred to the Commission for decision, provided both countries consent.

The Commission reports to the Secretary of State for External Affairs of Canada and to the Secretary of State of the United States.

Department of Justice.—This Department, established by SC 1868, c. 39, now operates under authority of the Department of Justice Act (RSC 1952, c. 71). It provides legal services to the Government and various government departments including preparing and settling government legislation, settling instruments issued under the Great Seal of Canada, regulating and conducting litigation for or against the Crown, superintending the acquisition of property and prosecutions under federal legislation other than the Criminal Code, administers federal statutes dealing with legal matters and provides administrative services for the Supreme Court of Canada and the Exchequer Court. The Department also superintends the penitentiaries and administers the prison system of Canada.

The Commissioner of the Royal Canadian Mounted Police operates under the direction of the Minister of Justice who also reports to Parliament for the National Parole Board.

Department of Labour.—The Department of Labour was established in 1900 by Act of Parliament (SC 1900, c. 24) and now operates under authority of the Department of Labour Act (RSC 1952, c. 72). The Department administers, under the Minister of Labour, legislation dealing with: industrial relations, investigation of disputes, etc.; fair employment practices; the regulation of fair wages and hours of labour; reinstatement in civil employment; female employee equal pay; government annuities; government employee compensation; merchant seamen compensation; technical and vocational training assistance; annual vacations with pay. It promotes joint consultation in industry through labour-management committees; provides co-ordination of services for rehabilitation of disabled civilians; organizes manpower utilization programs, e.g., farm labour; and operates a Women's Bureau. The Department publishes the *Labour Gazette* and other publications, as well as general information on labour-management, employment, manpower and related subjects.

The Canada Labour Relations Board acts on behalf of, and the National Technical and Vocational Training Advisory Council acts in an advisory capacity to the Minister of Labour, and the Merchant Seamen Compensation Board reports to the Minister of Labour. The Department is the official liaison agency between the Canadian Government and the International Labour Organization. The Unemployment Insurance Commission, which maintains the National Employment Service, reports to Parliament through the Minister of Labour.

Department of Mines and Technical Surveys.—This Department was created by an Act of Parliament (SC 1949, c. 17) which received Royal Assent on Dec. 10, 1949. Its establishment resulted from the reorganization of certain former departments. A primary function of the Department is to provide technological assistance in the development of Canada's mineral resources through investigations and research in the fields of geology, mineral dressing and metallurgy. The Department establishes the framework of surveys throughout the country that provides control for all surveying and mapping in Canada. It produces the base maps used in the development of Canada's natural resources, conducts all the charting of Canada's coastal and inland waters, and issues official sailing directions and Canadian sea and air navigation charts. The Department is under the Minister of Mines and Technical Surveys and is divided into five branches: the Surveys and Mapping Branch, the Geological Survey of Canada, the Mines Branch, the Dominion Observatories, and the Geographical Branch. The Mineral Resources Division, a unit of head office, gives its whole attention to matters concerned with the economics of mineral resources development.

In 1959 the Department became actively interested in oceanography and made two major moves toward setting its program into motion: (1) the establishment of the Polar Continental Shelf Project to carry out a long-term investigation of the continental shelf lying north and west of the Canadian Arctic Archipelago and of the waters above it, together with the islands of the Archipelago and the straits and sounds between the islands; and (2) the setting up of a $3,000,000 oceanographic institute in the Bedford Basin near Halifax which will have facilities for study in any phase of the science.

The Department administers the Explosives Act which regulates the manufacture, testing sale, storage and importation of explosives, and the Emergency Gold Mining Assistance Act which provides cost-aid to the Canadian gold mining industry.

Boards and Commissions are: Canadian Board on Geographical Names; Board of Examiners for Dominion Land Surveyors; the International Boundary Commission; and the Interprovincial Boundary Commissions.

Department of National Defence.—The Department of National Defence was established on Jan. 1, 1923 by the Department of National Defence Act, 1922, and was an amalgamation o the Department of Miltia and Defence, the Naval Service and the Air Board. The Department and the Canadian Forces (the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force) now operate under the National Defence Act, 1950 (RSC 1952, c. 184).

In 1940 additional Ministers for Naval and Air Services were appointed and the Department was organized under a Minister of National Defence and two additional Ministers so that there was a Minister and staff for each of the Armed Services. Upon demobilization of the wartime Forces the appointment of Ministers of National Defence for Naval Services and Air Services ceased, and the Armed Forces were, in 1946, again administered by the Minister of National Defence without additional Ministers. Under the National Defence Act, the Canadian Forces are being administered solely by the Minister of National Defence and the Associate Minister o National Defence.

The Defence Research Board, created in 1947 to carry out research relating to national defence and to advise the Minister on all relevant matters of a scientific or technical nature, now function under the National Defence Act. The Chairman of the Board has a status equivalent to that o a Chief of Staff of one of the Canadian Forces.

National Energy Board.—This Board was established under the National Energy Board Act, 1959 for the broad purpose of assuring the best use of energy resources in Canada. The Board, composed of five members, is responsible for the regulation of the construction and operation of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, the tolls charged for transmission by oil and gas pipelines, the export and import of gas and the export of electric power, and the construction of the lines over which such power is transmitted. The Board is also required to study and keep under review all matters relating to energy under the jurisdiction of the Parliament of Canada and to recommend such measures as it considers necessary and advisable on the subject. The Board reports to Parliament through the Minister of Trade and Commerce.

National Film Board.—The National Film Board, established in 1939, operates under the National Film Act (RSC 1952, c. 185) which provides for a Board of Governors of nine members—a Government Film Commissioner, appointed by the Governor in Council, who is Chairman of the Board, three members from the public service of Canada and five members from outside the public serice. The Board reports to Parliament through a designated Minister of the Crown (at present the Minister of Citizenship and Immigration). The Board is responsible for advising the Governor in Council on film activities and is authorized to produce and distribute films in the national interest and, in particular, films "designed to interpret Canada to Canadians and to other nations".

Department of National Health and Welfare.—This Department was established in October 1944 under authority of the Department of National Health and Welfare Act (RSC 1952, c. 74). It was originally formed as the Department of Health in 1919 and later became part of the Department of Pensions and National Health. This Department was replaced in 1944 by the Department of National Health and Welfare and the Department of Veterans Affairs.

The Department, headed by the Minister of National Health and Welfare, is composed of three branches — Administration, Health, and Welfare — and is administered by two Deputy Ministers.

The Department has charge of all matters relating to the promotion or preservation of the health, social security and social welfare of the people of Canada over which the Federal Parliament has jurisdiction. It administers the Acts listed in Section 3, p. 114, and is also responsible for: the administration of the National Health Program under which grants are made available to the provinces for the development and extension of health services; the federal aspects of emergency health and welfare services; the provision of health, medical and hospital services to Indians and Eskimos and to other elements of the population in the Yukon and Northwest Territories; the provision of assistance and consultative services to the provinces upon request on blindness control, child and maternal health, mental health, dental health, nursing, medical rehabilitation, nutrition and hospital design; the inspection and medical care of immigrants and seamen and the administration of marine hospitals; the supervision of public health facilities on railway, water and other forms of transportation; the enforcement of regulations of the International Joint Commission relating to public health; the promotion and conservation of the health of civil servants and other government employees; the collection, publication and distribution, subject to the provisions of the Statistics Act, of information relating to public health, improved sanitation and social and industrial conditions affecting the health of Canadians.

National Library.—The National Library came formally into existence on Jan. 1, 1953, with the proclamation of the National Library Act (RSC 1952, c. 330). It publishes *Canadiana*, a monthly catalogue of new publications relating to Canada, with an annual cumulation. The Library also publishes other bibliographies. Its Reference Division maintains the National Union Catalogue, which embodies the author catalogues of the major libraries in the ten provinces and is thus a key to the book collections of the whole country. Its book collection is growing steadily and at the end of 1960 consisted of about 250,000 volumes. The National Librarian reports to Parliament through the Minister of Citizenship and Immigration.

National Parole Board.—The establishment of the National Parole Board, which was formed in January 1959, is authorized by the Parole Act (SC 1958, c. 38) by which it is given absolute jurisdiction over all matters of parole. It is composed of a chairman and three members appointed by Order in Council for a ten-year period. The Board reports to Parliament through the Minister of Justice.

Department of National Revenue.—From Confederation until May 1918, customs and inland revenue Acts were administered by separate departments; after that date they were amalgamated under one Minister as the Department of Customs and Inland Revenue. In 1921 the name was changed to the Department of Customs and Excise. In April 1924 collection of income taxes was placed under the Minister of Customs and Excise and, under the Department of National Revenue Act, 1927, the Department became known as the Department of National Revenue.

The Customs and Excise Division of the Department is responsible for the assessment and collection of customs and excise duties as well as sales and excise taxes, by ports and outports. The Taxation Division is responsible for the assessment and collection of income taxes and estate taxes by 29 district offices throughout Canada.

The Minister of National Revenue is responsible to Parliament for the Tax Appeal Boar and also reports to Parliament for the Canadian Broadcasting Corporation and the Board c Broadcast Governors.

Department of Northern Affairs and National Resources.—The Department of Norther Affairs and National Resources was established in December 1953, superseding the Department c Resources and Development. In addition to Administration Services, which performs auxiliar functions, the Department is divided into six branches: the National Parks Branch administer the National Parks and National Historic Parks of Canada, National Historic Sites, and wildlif matters coming within the jurisidiction of the Federal Government; the Water Resources Branc is responsible for the investigation of water power resources, for the administration of federa assistance to the provinces under the Canada Water Conservation Assistance Act and for federa interest in certain joint federal-provincial construction projects; the Northern Administratio Branch is responsible for the administration of various federal Acts, territorial ordinances an regulations pertaining to the government of the Northwest Territories, for the conduct of certai business arising from the general administration of the Yukon Territory, for the administratio of natural resources in those Territories, and for Eskimo affairs, as well as for certain lands an mineral rights in the provinces vested in the Crown in the right of Canada; the Natural Histor Branch and Human History Branch of the National Museum of Canada are responsible for research publication of scientific studies, and public exhibitions in their respective fields of natural histor and human history; and the Canadian Government Travel Bureau promotes the tourist industr by encouraging travel to Canada.

The Minister of Northern Affairs and National Resources is also responsible to Parliamen for the Northern Canada Power Commission, and the National Battlefields Commission. Th Historic Sites and Monuments Board of Canada, an honorary body of recognized historians representing the various provinces, and the Advisory Committees on Wildlife Protection, Norther Development, and Water Use Policy act in an advisory capacity to the Minister in their respectiv fields. The Deputy Minister is Commissioner of the Northwest Territories and Chairman c the Northern Canada Power Commission and of each of the Advisory Committees.

Post Office Department.—Administration and operation of the Canada Post Office, by virtu of the Post Office Act (RSC 1952, c. 212) and under the Postmaster General, includes all phase of postal activity, personnel, mail handling, transportation of mails by land, water, rail and ai and the direction and control of financial services including the operation of money order an savings bank business.

Public Archives.—The Public Archives was founded in 1872 and is administered under th Public Archives Act (RSC 1952, c. 222) by the Dominion Archivist who has the rank of a Deput Minister and reports to Parliament through the Minister of Citizenship and Immigration. It purpose is to assemble and make available to the public a comprehensive collection of historica source material relating to the history of Canada. Major emphasis is placed on official record of the Government and the personal papers of political leaders and other prominent figures. Thes are supplemented by copies of many records in the British and French archives that relate t Canada, a fine map collection, a historical library, and many prints, paintings and photographs In 1956 the Archives opened a large Records Centre, designed to provide economical accommodatio for departmental records that are used relatively seldom. The building, equipped with ove 50 miles of shelving, also serves as a sorting centre in which papers of long-term interest are picke out of obsolete files, and useless material is segregated for destruction.

Under the terms of the Laurier House Act (RSC 1952, c. 163) the Public Archives is responsibl for the administration of Laurier House as a museum and study centre. The Dominion Archivis also administers the Government's Central Microfilm Unit, which is housed in the Record Centre.

Department of Public Printing and Stationery.—This Department was established i 1886.

The Department is responsible for supplying all requirements of printing and stationery t Parliament and departments of the Canadian Government; the cataloguing, distribution and sal of government publications; the publication of the *Canada Gazette*, and all departmental report papers, etc., required to be published by authority of the Governor General in Council (RS 1952, c. 226) and the publication of the Statutes of Canada (RSC 1952, c. 230).

The Department of Public Printing and Stationery is under the jurisdiction of the Secretar of State. The deputy-head is the Queen's Printer and Controller of Stationery.

Department of Public Works.—This Department was constituted in 1867 and operat under the legislative authority of the Public Works Act and other Acts of Parliament. It responsible for the management and direction of the public works of Canada and, except as spec fically provided in other Acts, attends to the construction and maintenance of public building wharves, piers, roads and bridges and the undertaking of dredging and navigable waters protectic work. The Department maintains district offices at key points across the country. The mai operating Branches of the Department with headquarters in Ottawa are: Harbours and Rivers Engineering, Building Construction, Development Engineering, Property and Building Management, and Purchasing and Stores. In addition, the Fire Prevention Branch, organized in 1919 and now a part of the Department of Public Works, maintains fire-loss records, makes inspections, reports on fire protection legislation and protection methods and endeavours to extend and co-ordinate fire prevention work in Canada. Federal interests in the Trans-Canada Highway are also handled by the Department.

The Minister of Public Works is responsible to Parliament for the Central Mortgage and Housing Corporation and for the National Capital Commission.

Royal Canadian Mounted Police.—The Royal Canadian Mounted Police, a civil force maintained by the Federal Government, was organized in 1873 as the North West Mounted Police. It now operates under the Royal Canadian Mounted Police Act, 1959 and is responsible for enforcing federal laws throughout Canada. By agreement with certain provincial governments, it is also responsible for enforcing provincial laws within those provinces and for policing many district municipalities, cities and towns. The Force is controlled and administered by the Minister of Justice.

Department of the Secretary of State.—The Secretary of State and Registrar General of Canada is the official medium of communication with the Throne through the Governor General, and is the custodian of the Great Seal of Canada and of the Privy Seal of the Governor General. He is responsible for the preparation and tabling of returns in Parliament. He administers legislation relating to patents of invention, trade marks, industrial designs, timber marking, copyright, companies, boards of trade, the registration of trade unions, public officers, public documents and governmental and parliamentary translations. He is also the Custodian of Enemy Property.

The Secretary of State has certain responsibilities with respect to civilian decorations, precedence and ceremonial. The Committee on the use of Parliament Hill and the National War Memorial falls within his purview. He is the Minister of the Department of Public Printing and Stationery and the spokesman in Cabinet and Parliament for the Civil Service Commission and the Chief Electoral Officer.

The Tariff Board.—Constituted in 1931 under the Tariff Board Act (SC 1931, c. 55), the Board derives its duties and powers from three statutes: the Tariff Board Act (RSC 1952, c. 261, as amended); the Customs Act (RSC 1952, c. 58, as amended); and the Excise Tax Act (RSC 1952, c. 100, as amended).

Under the Tariff Board Act, the Board makes inquiry into and reports upon any matter in relation to goods that, if brought into Canada, are subject to or exempt from duties of customs or excise taxes. Reports of the Board are tabled in Parliament by the Minister of Finance. It is also the duty of the Board to hold an inquiry under Sect. 14 of the Customs Tariff and to inquire into any other matter in relation to the trade and commerce of Canada that the Governor in Council sees fit to refer to the Board for inquiry and report.

Under the provisions of the Customs Act and the Excise Tax Act, the Tariff Board acts as a court to hear appeals from rulings of the Department of National Revenue, Customs and Excise, in respect of excise taxes, tariff classification, value for duty, and drawback of customs duties. Declarations of the Board on appeals on questions of fact are final and conclusive but the Acts contain provisions for appeal, on questions of law, to the Exchequer Court of Canada.

Department of Trade and Commerce.—The Department of Trade and Commerce was established by Act of Parliament on June 23, 1887, but did not function until Dec. 5, 1892, when an Order in Council to this effect was passed. Before the formation of the Department, assistance in the development of Canada's external trade was provided by eight Canadian Commercial Agents—five in the West Indies, two in Great Britain and one in France—who served on a part-time basis and were responsible to the Minister of Finance. In 1895 a Canadian Commercial Agent was appointed at Sydney, Australia, as the first full-time salaried Agent of the Department.

The framework of the present Trade Commissioner Service emerged during the next decade or so, the Commercial Agents gradually giving place to career Trade Commissioners. There are now 147 Trade Commissioners serving at Headquarters and abroad in 63 posts (including Assistant Trade Commissioners and agricultural, fisheries and timber specialists). Where a Trade Commissioner is a member of a mission maintained by the Department of External Affairs he holds diplomatic status and is known as a Minister (Commercial), Commercial Counsellor or Commercial Secretary.

The Department provides a wide range of services to Canadian businessmen through the Agriculture and Fisheries Branch, the Canadian Government Exhibition Commission, the Commodities Branch, the Economics Branch, the International Trade Relations Branch, the Trade Commissioner Service, the Trade Publicity Branch and the Domestic Commerce Service; the latter comprises the Depreciation Certification Branch, the Industrial Design Branch, the Industrial Development Branch, the Small Business Branch and the Standards Branch.

The following boards, commissions, Crown corporations and agencies report to Parliament through the Minister of Trade and Commerce: the Dominion Bureau of Statistics, the Export Credits Insurance Corporation, the National Energy Board, the Northern Ontario Pipe Line Crown Corporation, the Northern Transportation Company Limited, Eldorado Aviation Limited and Eldorado Mining and Refining Limited.

Department of Transport.—The Department was created on Nov. 2, 1936 from the former Departments of Marine and of Railways and Canals, and the Civil Aviation Branch of the Department of National Defence (RSC 1952, c. 79).

The work of the Department consists of three main Services—Marine, Air and Railways. Marine Service operations include aids to navigation, nautical and pilotage services, marine agencies, secondary canals, steamship inspection and floating equipment, and direct supervision over 300 public harbours; nine other harbours come under supervision of the Department but are administered by commissions. Air Services cover the operation of civil aviation, meteorological and telecommunication branches. The latter includes the administration and regulation of radar, radio marine and radio aeronautical aids to navigation and of communication by wire and by government telegraph and telephone.

Other services of the Department are in connection with the Government-owned companies: the Canadian National Railways, Canadian Government Railways, the Prince Edward Island, Newfoundland, and Yarmouth-Bar Harbor ferry services, and Trans-Canada Air Lines.

The Minister of Transport is responsible to Parliament for the following boards, commissions and Crown companies: the Air Transport Board, Board of Transport Commissioners, Canadian Maritime Commission, National Harbours Board, Park Steamship Company Limited, the St. Lawrence Seaway Authority, and the Canadian Overseas Telecommunication Corporation.

Department of Veterans Affairs.—This Department, established in 1944 (RSC 1952, c. 80), is concerned exclusively with the welfare of veterans and with the dependants of veterans and of those who died on active service. The Department provides treatment services (hospital, medical, dental and prosthetic), welfare services, education assistance, life insurance, and land settlement and home construction assistance. The Veterans' Bureau assists veterans in the preparation and presentation of pension claims.

The Canadian Pension Commission, established by the Pension Act (RSC 1952, c. 207), and the War Veterans Allowance Board, established by the War Veterans Allowance Act (RSC 1952, c. 340), also report to Parliament through the Minister of Veterans Affairs.

The Department has treatment institutions and facilities in a number of centres of population. It also maintains, in large cities across Canada, administrative offices, which are shared with the Canadian Pension Commission and the War Veterans Allowance Board, and an office in London, England.

Section 2.—Crown Corporations

The Crown corporation form of public enterprise is not a new type of organization in Canada but in recent years, as the work of government has become more complex, greater reliance has been placed on it as the appropriate instrument for administering and managing many public services in which business enterprise and public accountability must be combined.

The use of the corporate device to harmonize public responsibility in the development of economic resources and the provision of public services with the pursuit of commercial and industrial objectives has led to the adoption of many different forms and formulas of management. The most usual practice has been to set up a corporation under the provisions of a special Act of Parliament which defines its purposes and sets forth its powers and responsibilities. However, during World War II the Minister of Munitions and Supply was authorized to procure the incorporation of companies under the federal Companies Act, 1934, or under any provincial Companies Act to which he might delegate any of the powers conferred on him under the Department of Munitions and Supply Act or any Order in Council. Under this legislation about 28 companies were created to serve a wide variety of purposes; most of these companies have since been wound up.

Following the successful experience during the war years in relying on the Companies Act for the establishment of Crown companies, similar incorporating powers were granted by an amendment to the Research Council Act and have been incorporated in the Atomic Energy Control and the Defence Production Acts.

In 1946 the Government Companies Operation Act was passed to regulate the operation of companies formed under the Companies Act. However, it was applicable only to a relatively small number of companies and, in order to establish a more uniform system of financial and budgetary control and of accounting, auditing and reporting for Crown corporations generally, Part VIII of the Financial Administration Act was enacted in 1951 and brought into operation by proclamation on Oct. 1, 1952. Upon its enactment the financial provisions of the Government Companies Operation Act were repealed.

One of the more interesting features of the later legislation is the attempt that has been made to define and classify Crown corporations.* The Act defines a Crown corporation as a corporation that is ultimately accountable, through a Minister, to Parliament for the conduct of its affairs and establishes three classes of corporation: departmental, agency and proprietary.

Departmental Corporations.—A departmental corporation is defined as a Crown corporation that is a servant or agent of Her Majesty in right of Canada and is responsible for administrative, supervisory or regulatory services of a governmental nature. Ten departmental corporations are listed in Schedule B to the Act:—

Agricultural Stabilization Board (formerly Agricultural Prices Support Board)
Atomic Energy Control Board
Canadian Maritime Commission
Director of Soldier Settlement
The Director, The Veterans' Land Act
Dominion Coal Board
Fisheries Prices Support Board
National Gallery of Canada
National Research Council
Unemployment Insurance Commission.

Agency Corporations.—An agency corporation is defined as a Crown corporation that is an agent of Her Majesty in right of Canada and is responsible for the management of trading or service operations on a quasi-commercial basis or for the management of procurement, construction or disposal activities on behalf of Her Majesty in right of Canada. The following agency corporations are listed in Schedule C to the Financial Administration Act or have been subsequently added to that Schedule by the Governor in Council:—

Atomic Energy of Canada Limited
Canadian Arsenals Limited
Canadian Commercial Corporation
Canadian Patents and Development Limited
Crown Assets Disposal Corporation
Defence Construction (1951) Limited
National Battlefields Commission
Northern Canada Power Commission (formerly Northwest Territories Power Commission)
National Capital Commission (formerly Federal District Commission)
National Harbours Board
Park Steamship Company Limited.

---

* Not all Crown corporations are subject to the provisions of the Financial Administration Act. For example, the Canadian Wheat Board, the Bank of Canada and its subsidiary the Industrial Development Bank, because of the special nature of their functions, are excluded from operations of the Crown corporations Part of the Act and are governed by their own Acts of incorporation, as are such joint enterprises of the federal and provincial governments as the Eastern Rockies Forest Conservation Board and the Halifax Relief Commission. Though not included in the Schedules to the Financial Administration Act, certain provisions of the Act apply to the Northern Ontario Pipe Line Crown Corporation, set up on June 7, 1956 to oversee the building of a cross-country natural gas pipeline. The Canada Council was set up under the Canada Council Act (assented to Mar. 28, 1957) as a Crown corporation but has been declared not an agency of the Crown and hence is not included in the Schedules to the Financial Administration Act.

Two corporations, Canadian Sugar Stabilization Corporation Limited and Commodity Prices Stabilization Corporation Limited, listed in Schedule C when the Financial Administration Act was proclaimed, have since discontinued operations and surrendered their charters. By an Order in Council of June 15, 1955, the name of the Northwest Territories Power Commission (now Northern Canada Power Commission) was deleted from Schedule D and added to Schedule C, effective Apr. 1, 1954.

Proprietary Corporations.—A proprietary corporation is defined as a Crown corporation that (1) is responsible for the management of lending or financial operations, or for the management of commercial or industrial operations involving the production of or dealing in goods and the supplying of services to the public, and (2) is ordinarily required to conduct its operations without Parliamentary appropriations. The following proprietary corporations are listed in Schedule D to the Act or have been subsequently added to that Schedule by the Governor in Council:—

Canadian Broadcasting Corporation
Canadian National (West Indies) Steamships Limited
Canadian Overseas Telecommunication Corporation
Central Mortgage and Housing Corporation
Eldorado Aviation Limited
Eldorado Mining and Refining Limited
Export Credits Insurance Corporation
Farm Credit Corporation (formerly Canadian Farm Loan Board)
National Railways, as defined in the Canadian National-Canadian Pacific Act, 1933
Northern Transportation Company Limited
Polymer Corporation Limited
The St. Lawrence Seaway Authority
Cornwall International Bridge Company Limited (subsidiary to the St. Lawrence Seaway Authority)
Trans-Canada Air Lines.

Departmental corporations are governed by the provisions of the Financial Administration Act that are applicable to departments generally. Agency and proprietary corporations, however, are subject to the provisions of the Crown corporations Part of the Act although, if there is any inconsistency between the provisions of that Part and those of any other Act applicable to a corporation, the Act provides that the latter prevail. There is provision in the Part for the control and regulation of such matters as corporation budgets and bank accounts, the turning over to the Receiver General of surplus money, limited loans for working-capital purposes, the awarding of contracts and the establishment of reserves, the keeping and auditing of accounts, and the preparation of financial statements and reports and their submission to Parliament through the appropriate Minister.

A further form of control is exercised by Parliament through the power to vote financial assistance. This may take different forms. For some corporations, capital may be provided by parliamentary grants, loans or advances that may subsequently be converted into capital stock or bonds; for others it may be by the issue of capital stock to be subscribed and paid for by the Government; or by the sale of bonds to either the Government or the public. A few corporations have financed all or a portion of their requirements from their own resources or earnings. Under a special financing arrangement, a 15-p.c. excise tax charged on radio and television sets and their parts and accessories, was allocated to the revenue of the Canadian Broadcasting Corporation, but this was discontinued under the provisions of the Broadcasting Act which came into force on Nov. 10, 1958, and since that time the Corporation has received federal financing solely by parliamentary grants.

Prior to 1952, Crown corporations did not pay corporate income taxes. However, the Income Tax Act was later amended so that, in respect of financial years commencing after Jan. 1, 1952, proprietary Crown corporations pay taxes on income earned in the same manner as any privately owned corporation. One desirable result of this amendment is that the financial statements of these Crown companies are now more comparable with those of private industry, with which in some instances they are in competition, and thus it is easier to assess the relative efficiency of their operations.

The functions of the various Crown corporations are given briefly in the following paragraphs. For a number of them, further details are included in the Chapters dealing with the subjects concerned (see Index).

Agricultural Stabilization Board.—The Board was established in 1958 (SC 1957-58, c. 22) to administer the provisions of the Agricultural Stabilization Act, which has replaced the Agricultural Prices Support Act. The Board reports to Parliament through the Minister of Agriculture.

Atomic Energy Control Board.—In December 1946, by Act of Parliament (RSC 1952, c. 11), the regulation and control of atomic energy in Canada was placed under the Atomic Energy Control Board. The Board reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research (at present the Minister of Veterans Affairs).

Atomic Energy of Canada Limited.—This Crown company was incorporated in February 1952 under the Atomic Energy Control Act, 1946 (RSC 1952, c. 11) to take over from the National Research Council on Apr. 1, 1952 the operation of the Chalk River project. The main activities of the company are (*a*) the development of economic nuclear power, (*b*) scientific research and development in the atomic energy field, (*c*) the operation of nuclear reactors and (*d*) the production of radioactive isotopes and associated equipments such as Cobalt-60 beam therapy units for the treatment of cancer. The company reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research (at present the Minister of Veterans Affairs).

Bank of Canada.—Legislation of 1934 (RSC 1952, c. 13) provided for the establishment of a central bank in Canada, the function of which is to regulate credit and currency, to control and protect the external value of the Canadian dollar and to stabilize the level of production, trade, prices and employment so far as may be possible within the scope of monetary action. The Bank acts as the fiscal agent of the Government of Canada, manages the public debt and has the sole right to issue notes for circulation in Canada. The Bank is managed by a Board of Directors appointed by the Government and composed of a Governor, a Deputy Governor and 12 Directors; the Deputy Minister of Finance is also a member of the Board. The Bank reports to Parliament through the Minister of Finance and is governed by its own Act of incorporation. (See footnote, p. 105.)

The Canada Council.—Established by Order in Council dated Apr. 15, 1957, this corporation of 21 members, a Director and an Associate Director operates under the terms of the Canada Council Act, assented to Mar. 28, 1957. The function of the Council is to encourage the arts, humanities and social sciences in Canada; its work is financed by a $50,000,000 University Capital Grants Fund and the earnings from a $50,000,000 Endowment Fund. In the making, managing and disposing of investments under the Act, the Council has the advice of an Investment Committee of five, including the Chairman and another member of the Council. The proceedings of the Council are reported each year to Parliament through the Prime Minister.

Canadian Arsenals Limited.—This company was established under the Companies Act by Letters Patent dated Sept. 20, 1945, and is subject to the Government Companies Operation Act (RSC 1952, c. 133) and certain provisions of the Financial Administration Act (RSC 1952, c. 116). The company was set up to take over and operate Crown-owned plant and equipment. Among the items it now manufactures are propellants and explosives, small arms, radar equipment, optical and electronic instruments, and a wide variety of ammunition and components. Its divisions, together with the location of their plants, are as follows: Dominion Arsenal Division (Quebec and Val Rose, Que.); Explosives Division (Valleyfield, Que.); Filling Division (St. Paul l'Ermite, Que.); Gun Ammunition Division (Lindsay, Ont.); Small Arms Division (Long Branch, Ont.); Instrument and Electronic Division (Scarborough, Ont.). The company is responsible to Parliament through the Minister of Defence Production.

Canadian Broadcasting Corporation.—The Broadcasting Act, 1958 continues the CBC as a Crown corporation for the purpose of operating a national broadcasting service. It has the authority to maintain and operate broadcasting stations and networks and to originate and secure programs from within and outside Canada. This national radio and television service is financed through annual grants from Parliament and revenues from commercial operations.

The Corporation consists of a board of 11 Directors appointed by the Governor in Council and chosen to give representation to the principal geographical divisions of the country. The Corporation reports to Parliament through a Minister of the Crown (at present the Minister of National

Revenue). The President and Vice President are full-time executives appointed for a period of seven years; the other nine Directors, including a Chairman and Vice Chairman are appointed for periods of three years and may serve two consecutive terms.

As the chief executive of the Corporation, the President, with the Vice President, is responsible to the Board of Directors for the conduct of its affairs. They administer the Corporation with four Staff Departments and three Operating Divisions. The Departments, headed by Vice Presidents are: Programs; Administration and Finance; Corporative Affairs and Engineering and Operations. The Divisions, headed by General Managers, are: Regional, French and English Network Broadcasting.

The Corporation's Head Office is situated in Ottawa with Headquarters for English Networks in Toronto, for French Networks in Montreal and with Regional Headquarters in St. John's for Newfoundland, Halifax for the Maritime Provinces, Winnipeg for the Prairie Provinces, and Vancouver for British Columbia. Headquarters for the Northern and Armed Forces Services are in Ottawa and for the International Service in Montreal.

Canadian Commercial Corporation.—This Corporation was established on May 1, 1946 by the Canadian Commercial Corporation Act (RSC 1952, c. 35). It purchases goods and commodities in Canada for the governments of other countries. It also acts as purchasing agent for international agencies such as the United Nations International Children's Emergency Fund and the United Nations Korean Reconstruction Agency. Other functions include arranging production and shipment of Canadian contributions of military stores to NATO countries. The Corporation also serves other departments of the Government of Canada. For instance, it arranges for the purchase and production of supplies and services which the External Aid Office is making available to other countries under the Colombo Plan. In carrying out its functions the Corporation works closely with the Department of Defence Production. It is responsible to Parliament through the Minister of Defence Production.

Canadian Maritime Commission.—The Commission was created in 1947 (RSC 1952, c. 38) to consider and recommend policies and measures necessary for the operation, maintenance, manning and development of a merchant marine and a ship-building and ship-repairing industry. The Commission is established as a separate Department of the Government of Canada but reports to Parliament through the Minister of Transport.

Canadian National Railways.—The Canadian National Railway Company was incorporated (SC 1919, c. 13) to operate and manage a national system of railways, including the Canadian Northern Railway System, the Canadian Government Railways and all lines entrusted to it by Order in Council. In 1923 the Grand Trunk Railway Company of Canada was amalgamated with the Canadian National Railway Company and since 1923 a number of railway lines acquired by the Government have been entrusted to the Company for operation and management, including the Newfoundland Railway and steamship services in 1949 and the Temiscouata Railway in 1950. The Canadian National Railways Act, 1919 was repealed in 1955 and the Canadian National Railways Act (SC 1955, c. 29) substituted therefor.

The Canadian National Railway Company is controlled by a Chairman and Board of Directors appointed by the Governor in Council, who report to Parliament through the Minister of Transport.

Canadian Overseas Telecommunication Corporation.—This Crown company was created on Dec. 10, 1949 by Act of Parliament (RSC 1952, c. 42) to acquire for public operation external telecommunication assets in Canada, in keeping with the Commonwealth Telegraph Agreement signed May 11, 1948. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth. The Corporation is responsible to Parliament through the Minister of Transport.

Canadian Patents and Development Limited.—Canadian Patents and Development Limited is a Crown corporation established in 1948, pursuant to authority granted in an amendment to the Research Council Act which was passed in 1946. The primary purpose of the company is to make available to industry, through licensing arrangements, new processes developed by scientific workers of the National Research Council. Its services are equally available to other government departments, publicly supported institutions and universities. The company also has cross-agency arrangements with similar government agencies in other Commonwealth countries. The Board of Directors is composed of representatives from the National Research Council, from government departments and from industry and the universities. Any profits that the company may derive from licensing arrangements are available for further research and development. The Corporation reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research (at present the Minister of Veterans Affairs).

Canadian Wheat Board.—The Board was incorporated in 1935 under the Canadian Wheat Board Act to market, in an orderly manner, in the interprovincial and export trade, grain grown in Canada. Its powers include authority to buy, take delivery of, store, transfer, sell, ship or otherwise dispose of grain. Except as directed by the Governor in Council, the Board was not originally authorized to buy grain other than wheat but, since Aug. 1, 1949, it may also buy oats and barley if authorized to do so by Regulation approved by the Governor in Council. Only grain produced in the designated area, which includes Manitoba, Saskatchewan, Alberta and parts of British Columbia and Ontario, is purchased by the Board, which controls the delivery of grain into elevators and railway cars in that area as well as the interprovincial movement and export of wheat, oats and barley generally. The Board is governed by its own Act of incorporation (see footnote, p. 105). It reports to Parliament through the Minister of Agriculture.

Central Mortgage and Housing Corporation.—This Corporation was incorporated by Act of Parliament (RSC 1952, c. 46) in December 1945 to administer the National Housing Acts. Under the National Housing Act, 1954 (SC 1953–54 c. 23, as amended 1956 c. 9, 1957–58 c. 18, 1958 c. 3, 1959 c. 6, 1960 c. 10, and 1960–61 c. 1), the Corporation insures mortgage loans made by approved lenders for home ownership and rental housing; insures home improvement loans made by banks; makes direct loans to individual home-owners, to municipalities for construction of sewage treatment projects designed to eliminate pollution in water and soil and to universities for construction of student residences; undertakes jointly with provincial governments the assembly of land and construction of housing projects; provides financial assistance for studies to identify urban areas with blighted and substandard housing; assists municipalities in clearance and rehabilitation of substandard areas; conducts housing research; encourages community planning and owns and manages rental housing units built for war workers and veterans. The Corporation also arranges for and supervises construction of housing projects on behalf of the Department of National Defence and other government departments and agencies. The Corporation is responsible to Parliament through the Minister of Public Works.

Crown Assets Disposal Corporation.—This Corporation is established under the Surplus Crown Assets Act (RSC 1952, c. 260) and is subject to the Financial Administration Act (RSC 1952, c. 116). In June 1944, War Assets Corporation was established by statute to replace War Assets Corporation Limited which had been incorporated in 1943. In 1949 the name of War Assets Corporation was changed to Crown Assets Disposal Corporation. The Corporation's function is to dispose of surplus Crown assets. It is responsible to Parliament through the Minister of Defence Production.

Defence Construction (1951) Limited.—This company was established by Letters Patent in 1951 to take over the general undertakings of Defence Construction Limited. The company carries out major defence construction projects with the exception of houses and airfield runways and is responsible to Parliament through the Minister of Defence Production.

Director of Soldier Settlement and Director of the Veterans' Land Act.—The Director of Soldier Settlement (under the Act of 1919) is also the Director of the Veterans' Land Act, and in each capacity is legally a corporation sole. For administrative purposes, however, the programs carried on under both Acts constitute integral parts of the services provided by the Department of Veterans Affairs.

Dominion Coal Board.—The Board, established as a department in 1947 by the Dominion Coal Board Act (RSC 1952, c. 86), has the responsibility of studying and recommending to the Government policies concerning the production, import, distribution and use of coal. The chairman has the status of a deputy minister and the Board reports to Parliament through the Minister of Mines and Technical Surveys. The Board administers transportation and other subventions relating to coal, including those under the Atlantic Provinces Power Development Act (SC 1957–58, c. 25). It also administers loans authorized under the Coal Production Assistance Act (RSC 1952, c. 173, as amended by SC 1959, c. 39). The Dominion Coal Board Act makes provision for the regulation and control of the production, distribution and use of fuel in times of national emergency.

Eastern Rockies Forest Conservation Board.—The Board was appointed in 1947 under the Eastern Rocky Mountain Forest Conservation Act which authorized an agreement between the Government of Canada and the Province of Alberta relating to the protection and conservation of the forests of that portion of the eastern slope of the Rocky Mountains which gives rise to the major tributaries of the Saskatchewan River. The function of the Board is to determine the policy necessary to obtain the greatest possible flow of water in the Saskatchewan River system. The planning of programs of forest use and conservation is a joint duty of the Board and the Provincial Forest Service. The administration of the conservation area is a function of the province.

Funds for capital expenditures during the first seven years of the agreement were provided by the Federal Government with maintenance expenditures being paid by the Province of Alberta. In 1955 the province undertook the responsibility of financing both capital improvements and maintenance work. Currently one member of the three-man Board is appointed by the Federal Government and the province has the right to appoint two members. The choice of one of the three members as Board chairman is vested in the province. The Board reports to Parliament through the Minister of Forestry.

Eldorado Aviation Limited.—This company was incorporated Apr. 23, 1953 to carry air traffic, both passenger and freight, for Eldorado Mining and Refining Limited and its wholly owned subsidiary, Northern Transportation Company Limited. It reports to Parliament through the Minister of Trade and Commerce.

Eldorado Mining and Refining Limited.—Set up in 1944 under the name of Eldorado Minin and Refining (1944) Limited (the date was omitted from the name in June 1952), the company business is the mining and refining of uranium and the production of nuclear fuels in Canada. Th company has also entered into contracts for the purchase of uranium concentrates from privat producers in Canada. It reports to Parliament through the Minister of Trade and Commerce.

Export Credits Insurance Corporation.—This Corporation commenced operations in 194 under the Export Credits Insurance Act, 1944 (RSC 1952, c. 105) and is administered by a Boar of Directors (including the Deputy Minister of Trade and Commerce and the Deputy Minister Finance) with the advice of an Advisory Council. Its function is to insure Canadian exporter against non-payment by foreign buyers arising out of credit and political risks involved in foreig trade. The Corporation reports to Parliament through the Minister of Trade and Commerce.

Farm Credit Corporation.—This Corporation was established on Oct. 5, 1959 (SC 195 c. 43) for the purpose of providing for the extension of long-term mortgage credit to farmers. Th Corporation is responsible to Parliament through the Minister of Agriculture.

Fisheries Prices Support Board.—The Board was set up in July 1947 (RSC 1952, c. 120) t recommend to the Government price support measures when severe price declines occur. Th Board functions under the direction of the Minister of Fisheries and consists of a chairman, wh is a senior officer of the Department of Fisheries, and five members chosen from private and c operative firms in the industry. The Board has authority to buy fishery products and to se or otherwise dispose of them or to pay producers the difference between a price prescribed by th Board and the average price the product actually commands.

Industrial Development Bank.—The Bank, a subsidiary of the Bank of Canada, was inco porated in 1944 to provide loans to industrial enterprises where financing is not available throug recognized lending organizations. (See footnote, p. 105.)

National Battlefields Commission.—This Commission was established by Act of Parliamen in 1908 to preserve the historic battlefields at Quebec City. The Commission is composed of nin members, seven being appointed by the Federal Government and one each by the Provinces Ontario and Quebec. The Commission is supported by an annual statutory grant from the Federa Government and is responsible to Parliament through the Minister of Northern Affairs an National Resources.

National Capital Commission.—This Commission is a Crown agency created by the Nationa Capital Act (SC 1958, c. 37), proclaimed Feb. 6, 1959. It is the lineal descendant of the Federa District Commission.

The Commission is served by a full-time paid chairman and comprises a total of twent members representative of the ten provinces of Canada. There is a staff of seven officials reportin to a general manager, and a permanent work force of about 550.

Co-ordination and development of public lands in the National Capital Region are undertake by direct planning and construction by the Commission's staff; by co-operation with munic palities; by provision of planning aid or financial assistance in municipal projects; and by advisin the Department of Public Works on the siting and appearance of all Federal Government building in the 1,800-sq. mile National Capital Region. The Commission reports to Parliament throug the Minister of Public Works.

National Gallery of Canada.—The National Gallery of Canada was founded in 1880. B Act of Parliament in 1913, re-enacted in 1951, it was placed under the management of a Boar of Trustees appointed by the Governor General in Council and now operates under the Nation Gallery Act (RSC 1952, c. 186). It is responsible to Parliament through a Minister of the Crow (at present the Minister of Citizenship and Immigration).

The first charge of the National Gallery is the development and care of the national art colle tions. Other important services are the arrangement of loans and exhibitions from abroad an from its own holdings for showing in Canada and abroad, and general extension work consisting the distribution of reproductions for educational purposes, lectures, educational tours, publication school broadcasts and art films.

National Harbours Board.—The Board was established by Act of Parliament in 1936. It responsible for the administration of port facilities at Halifax, Saint John, Chicoutimi, Quebe Trois Rivières, Montreal, Vancouver and Churchill, the Jacques Cartier and Champlain bridg at Montreal Harbour, and the government grain elevators at Prescott and Port Colborne, On The Board is responsible to Parliament through the Minister of Transport.

National Research Council.—In 1917 the Research Council Act was passed and in 19 laboratories for scientific research were established at Ottawa. The National Research Counc now has Divisions of Pure and Applied Chemistry, Building Research, Mechanical Engineerin the National Aeronautical Establishment, Radio and Electrical Engineering, Pure and Applied Physics and Applied Biology. Regional laboratories have been established at Saskatoon, Sask., and Halifax, N.S.

A Medical Research Council fully responsible for policy in the field of medical research, but functioning under the general administration of the National Research Council, was established in November 1960.

Patentable processes and improvements developed by the Council are made available under licence to industry through a Crown company, Canadian Patents and Development Limited, and any profits from the licensing arrangements are used for further research and development.

The National Research Council reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Northern Canada Power Commission.—The Commission was established by Act of Parliament in 1948 to provide electric power to points in the Northwest Territories where a need developed and where power could be supplied on a self-sustaining basis; the Act was amended in 1950 to give authority to the Commission to provide similar services in Yukon Territory. The name of the Commission, formerly Northwest Territories Power Commission, was changed in 1956. The Commission is composed of a chairman and two members appointed by the Governor in Council. The Commission operates four hydro-electric plants, two of which are located in the Northwest Territories on the Snare River near Yellowknife, and two in the Yukon Territory on the Yukon River at Whitehorse and on the Mayo River near Mayo, and diesel electric plants at Forth Smith, Fort Simpson, Fort Resolution, Frobisher Bay, N.W.T., and Field, B.C., and a diesel power and central heating plant and water supply and sewerage systems at Inuvik, N.W.T.; the Commission also operates, on behalf of the Department of Northern Affairs and National Resources, a small diesel electric and heating plant at Fort McPherson, N.W.T., and a central heating plant and domestic water supply system at Fort Simpson, N.W.T.

The Minister of Northern Affairs and National Resources reports to Parliament for the Commission.

Northern Ontario Pipe Line Crown Corporation.—This Corporation was established by the Northern Ontario Pipe Line Crown Corporation Act (SC 1956, c. 10) for the purpose of constructing the northern Ontario section of the all-Canadian natural gas pipeline and of leasing, with an option to purchase, this section to Trans-Canada Pipe Lines Limited. In addition, the Corporation was authorized to make short-term loans to Trans-Canada Pipe Lines Limited for the construction of the western section of the pipeline. The Corporation is responsible to Parliament through the Minister of Trade and Commerce.

Pipeline installation on the northern Ontario section, which extends from the Manitoba-Ontario border to the vicinity of Kapuskasing, Ont., was completed on Oct. 22, 1958.

Northern Transportation Company Limited.—This Company was incorporated in 1947 under the title of Northern Transportation Company (1947) Limited, the date being omitted from the name in 1952. Previously a company chartered under an Alberta statute, it has been a wholly owned subsidiary of Eldorado Mining and Refining Limited since that Crown company was established and carries out the business of a common carrier in the Mackenzie River watershed. The Company is responsible to Parliament through the Minister of Trade and Commerce.

Park Steamship Company Limited.—After World War II this Company acted as an agent for Crown Assets Disposal Corporation in the sale and delivery to purchasers of Government war-built ships. This work is completed but the Company remains available to carry out any appropriate duties. It has no staff of its own, any necessary work being done by the staff of the Canadian Maritime Commission (see p. 108). The Company reports to Parliament through the Minister of Transport.

Polymer Corporation Limited.—This Corporation was established in 1942 by Letters Patent under the Companies Act and is subject to the Government Companies Operation Act (RSC 1952, c. 133) and the Financial Administration Act (RSC 1952, c. 116). It was set up to construct and operate a synthetic rubber plant which now produces a variety of synthetic rubber products and some chemicals. The plant is located at Sarnia, Ont. The Corporation is responsible to Parliament through the Minister of Defence Production.

St. Lawrence Seaway Authority.—The St. Lawrence Seaway Authority was established by Act of Parliament in 1951 (RSC 1952, c. 242) and came into force by proclamation on July 1, 1954. The Authority was incorporated for the purposes of constructing, maintaining and operating all such works as may be necessary to provide and maintain, either wholly in Canada or in conjunction with works undertaken by an appropriate authority in the United States, a deep waterway between the Port of Montreal and Lake Erie. The Authority is composed of a President, a Vice President and a Member and reports to Parliament through the Minister of Transport.

Trans-Canada Air Lines.—TCA came into being by Act of Parliament in 1937 (RSC 1952, c. 268) to provide for the development of a publicly owned scheduled transcontinental air service. Transatlantic air services were inaugurated by TCA on behalf of the Canadian Government during World War II and scheduled operations were commenced at the end of the War. TCA now maintains passenger, mail and commodity traffic services over nationwide routes and also services to the United States, England, Scotland, Ireland, France, Belgium, Switzerland, West Germany, Austria, Bermuda, the Bahamas, Jamaica, Antigua, Barbados and Trinidad. TCA is responsible to Parliament through the Minister of Transport.

Unemployment Insurance Commission.—The Commission was appointed on Sept. 24, 1940 under the provisions of the Unemployment Insurance Act, 1940 (RSC 1952, c. 273) for the purpose of administering the Act and providing a National Employment Service. It is composed of three Commissioners appointed by the Governor in Council, of whom one is designated Chief Commissioner. One Commissioner, other than the Chief Commissioner, is appointed after consultation with organizations representative of workers and the other after consultation with organizations representative of employers. The Chief Commissioner is appointed to hold office for a period of ten years and each of the other Commissioners to hold office for a period not exceeding ten years. The Commission is responsible to Parliament through the Minister of Labour.

Section 3.—Acts Administered by Federal Departments*

List of the Principal Acts of Parliament Administered by Departments of the Government of Canada

NOTE.—*Copies of individual Acts of Parliament and amendments may be obtained from the Queen's Printer, Ottawa, at prices of from 10 cents to $1.50 per copy according to number of pages. Where duplications of certain Acts appear in the list, parts of these Acts are administered under the Departments given.*

PART IV.—FEDERAL GOVERNMENT EMPLOYMENT

The Civil Service Commission.—The Federal Civil Service comprises, in the widest sense, all servants of the Crown—other than those holding political or judicial office—who are employed in a civil capacity and whose remuneration is paid wholly and directly from moneys voted by Parliament. Collectively they form the staffs of the various departments, commissions, boards, bureaus and other agencies of the Federal Government. Nearly every category of occupation is represented in the Civil Service. A few civil servants are appointed by one or both Houses of Parliament directly and a considerable number are appointed by departments and other agencies in accordance with the provisions of certain statutes, generally with executive approval of the Governor in Council. The remainder, by far the majority, are selected and appointed by the Civil Service Commission of Canada.

The Civil Service Commission as the central personnel agency of the Federal Government is the custodian of the merit principle in respect of both initial appointments and promotions. The steps by which the Commission came to be established in its present form constitute the record of Civil Service reform in Canada which began a year after Confederation and culminated in the passing of the Civil Service Act of 1918.

Recruitment.—The recruitment of civil servants is conducted by means of open competitive examination through which every citizen has the right to compete for positions in the service of his country. Examinations are held periodically as the staff requirements of the public service dictate. Any Canadian citizen may apply for headquarters positions open at Ottawa but applicants for local positions must normally be residents of the locality in which the vacancy occurs. Competitive examinations are announced through the press and through posters displayed on the public notice boards of post offices, offices of the National Employment Service, offices of the Civil Service Commission, and elsewhere. The examinations may be written, oral, a demonstration of skill, or any combination of these.

The names of persons successful in Civil Service examinations, arranged in order of rank, are recorded on eligible lists. Examination results are formally announced by publication in the *Canada Gazette* and each candidate—successful or unsuccessful—is advised of his standing. Appointments are made as required from the eligible lists which usually remain valid for one year.

The rank of the various successful candidates on eligible lists is influenced by the 'veterans' preference'. Actually the preference is limited largely, in accordance with its definition by law, to members of the Armed Forces who have served overseas in World War I or II or in the Korean theatre of operations. The highest order of preference is the 'disability preference' accorded to pensioners of the Armed Forces who as a result of their war service have been unable to resume their prewar civilian occupations.

In recent years the Civil Service Commission has decentralized its operations and now has ten district offices and six sub-offices across the country. The Commission is granting an increasing measure of autonomy and responsibility to these offices to permit more efficient service to field agencies.

Staff Training.—In 1947 the Commission set up a Staff Training Division to promote and guide a systematic service-wide training scheme. The training scheme, sponsored by the Commission, is a joint venture undertaken in co-operation with Federal Government departments, most of which have parallel training divisions. The Commission's Training Division is primarily a co-ordinating agency. It promotes and organizes activities, trains departmental instructors in the presentation of courses, prepares and on occassion gives courses of general application to all departments, publishes booklets and other training aids, assists departments in developing training to meet specialized needs, and acts as a general clearing-house for the exchange of information on training matters.

Promotion.—It is a prime objective of the Civil Service Act to create a career service. The result is that promotion, like entrance to the Service, is based on merit and a sound promotion system is in operation. The present procedure involves the consideration of three factors: efficiency of candidates in their present positions, fitness for the vacant positions, and seniority or length of service. Appeal machinery under Commission jurisdiction has been set up for those employees who feel that their qualifications have not been properly assessed.

Position Classification and Compensation.—Provision is made in the Civil Service Act for the classifying of positions in the public service. A system of position classification was instituted in 1919 and positions with like duties and responsibilities were classified alike and remunerated equally. Each position has a title, a set of tasks or duties which are proper to it in the organization in which it occurs and, arising out of these duties, a set of qualifications appropriate for their performance. Positions with duties of similar kind are grouped together under a common title to form a class, and grades within the class reflect the level of responsibility.

The determination of rates of compensation for each class is a continuing responsibility of the Commission and salary and wage surveys are conducted constantly through its Pay Research Bureau, which compiles objective and current information concerning levels of pay within and without the public service for the use not only of the Commission but also of the Government and the employees concerned. Position classification is a mainspring in the Commission's primary function of recruitment, involving the fixing of standards of qualification for each class of position.

Organization and Methods.—In recent years there has been an increasing awareness of the extent to which economical administration depends on the adoption of modern management techniques and devices. In 1948 the Commission set up an Organization and Methods Service, now known as the Management Analysis Division, to study problems of management in collaboration with officials directly responsible for major areas of administration. This Division affords practical assistance to departments and other agencies of the Government through the systematic examination of structure, operations, procedures and work methods. Its growing facilities are offered free of charge to all departments.

Statistics of Federal Government Employment.*—The current monthly survey of Federal Government employment, started in 1952, covers all employees of the Government of Canada; employees in this sense exclude the Governor General and Lieutenant-Governors, Ministers of the Crown and Members of Parliament, judges, persons under contract and members of the Armed Forces, but include Force members of the Royal Canadian Mounted Police. This survey is much more inclusive than the previous statistical series entitled "Civil Service of Canada" and comparisons between the two sets of figures should be made only after very careful study.

---

* Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

The survey is divided into two main portions: (1) departmental branches, services and corporations, and (2) agency and proprietary corporations and other agencies. A summary combines these two groups.

Total Federal Government Employment.—Table **1** shows all Federal Government employees classified by province. Each of the two categories mentioned above is subdivided into its component parts, resulting in five main groups. The first two combine retroactive and overtime payments with regular earnings to obtain gross earnings; the other three record as gross earnings all money earned by the employees covered.

[1] Earnings of employees abroad in agency and proprietary corporations and other agencies were included beginning with November 1959 and amounted to $22,176,000; data for previous months were not available.

Departmental Branches, Services and Corporations.—Employees in this group are covered in Tables **2** to **6**; their salaries are paid from the Consolidated Revenue Fund. Definitions of classifications are as follows. "Salaried" employees include all persons paid on the basis of an annual salary rate with the exception of ships' officers who, though paid an annual salary rate, are subject to special treatment under the regulations made pertaining to the Financial Administration Act. The salaried staff are employed in departmental branches, services and corporations which are subject to regulation by the Treasury Board and for which the positions are outlined in detail in the Estimates of Canada, or are established by means of supplementary Treasury Board Minutes. Thus this group of employees includes persons who are subject to the provisions of the Civil Service Act plus salaried persons employed on the staffs of Cabinet Ministers and appointed by statute or by Order in Council, and also the salaried staffs of certain administrative branches of the Government that do not fall under the jurisdiction of the Civil Service Act.

"Prevailing Rate" employees are those who occupy continuing positions that are subject to prevailing rate legislation and are therefore paid on the basis of the going salary for similar work in the area in which the individual is employed. Regulations made under authority of the Financial Administration Act govern the third group entitled "Ships' Officers and Crews".

These three groups comprise what may be called the "regular" employees of the government service. "Casuals and Others" are principally persons employed on a non-continuing basis.

[2] Includes employees undistributed as to sex, totalling 1,006.

Table 5 presents statistics for departmental branches, services and corporations on the basis of a classification by function. The purpose of such classification is to supply a means of studying the operation of government without the complication that results from differences in administrative establishment. This analysis is useful in three ways. First, it permits a detailed study of employment by the Government of Canada according to the main purposes or functions and, since these functions are not subject to the periodic changes that alter the administrative structure of the Government, it is possible to develop a statistical series which, with minor exceptions, is consistent over an extended period of time. Secondly, since differences in administrative establishment are eliminated, it is possible to make meaningful comparisons between Federal Government expenditures on employment and similar expenditures by other levels of government. Thirdly, an analysis of the relationship between expenditures on employment and total expenditures may be made with regard to each function.

Table 6 is an administrative analysis of departmental branches, services and corporations, showing data for these bodies as they were organized at Mar. 31, 1960. Because of periodic changes in the administrative structure of the Government, comparisons over a period of years should be based on the classification by function given in Table 5. Although most salaried staffs fluctuate little during the year, the Taxation Branch of the Department of National Revenue increases its staff considerably in March and April because of the heavy flow of income tax returns during that period, the Legislation branches employ extra staff during each session of Parliament, and several departments employ considerable numbers of students in the summer months. Prevailing rate and other types of employment generally reach a peak in numbers during summer and decline to a lower level in winter.

5.—Federal Government Employees as at Mar. 31, 1960, and Regular Earnings for the Year Ended Mar. 31, 1960, classified by Function

NOTE.—Excludes agency and proprietary corporations and other agencies, figures for which are given in summary form in Table 7.

---

[1] Includes "North Atlantic Treaty Organization" and "Special".

[2] Excludes the Governor General and ten Lieutenant-Governors with salaries amounting to $139,667.

[3] Excludes 330 judges with salaries amounting to $4,754,000.

[4] Excludes field parties—prevailing rate employees with earnings of $257,956, ships' crews with earnings of $738,760, and casuals and others with earnings of $1,856.

[5] Excludes 14,218 employees paid from postal revenues, earning $21,666,630.

[6] Excludes Christmas helpers, earning $2,807,009 during the 1959 Christmas season.

Agency and Proprietary Corporations and Other Agencies.—The following are organizations owned by the Federal Government. Employees and earnings are shown by month in Table 7; a provincial distribution of employees and a summary of the total payroll in each of the three groups is given in Table 1, p. 119.

Agency Corporations

- Atomic Energy of Canada Limited
- Canadian Arsenals Limited
- Canadian Commercial Corporation
- Canadian Patents and Development Limited
- Crown Assets Disposal Corporation
- Defence Construction (1951) Limited
- National Battlefields Commission
- National Capital Commission
- National Harbours Board
- Northern Canada Power Commission

Proprietary Corporations

- Canadian Broadcasting Corporation
- Canadian National Railways
- Canadian Overseas Telecommunication Corporation
- Central Mortgage and Housing Corporation
- Cornwall International Bridge Company Limited
- Eldorado Aviation Limited
- Eldorado Mining and Refining Limited
- Export Credits Insurance Corporation
- Farm Credit Corporation
- Northern Transportation Company Limited
- Polymer Corporation Limited
- St. Lawrence Seaway Authority
- Trans-Canada Air Lines

Other Agencies

- Bank of Canada
- Canadian Wheat Board
- Industrial Development Bank
- Northern Ontario Pipe Line Crown Corporation
- Office of the Custodian

7.—Employees and Earnings in Agency and Proprietary Corporations and Other Agencies, by Month, Years Ended Mar. 31, 1959 and 1960

[1] Employees abroad and their earnings included beginning November 1959. As an indication, there were 8,534 such employees at the end of March 1960 and earnings for the period November 1959 to March 1960 amounted to $22,176,000.

PART V.—CANADA'S EXTERNAL RELATIONS*

Canada's Status in the Commonwealth of Nations.—The several stages in the development of the status of Canada have been authoritatively described in the reports of successive Imperial Conferences including that held at London in 1926 which defined the group of self-governing communities consisting of the United Kingdom and the Dominions as "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations". That Conference also recognized that, as a consequence of this equality of status, the Governor General of a Dominion "is the representative of the Crown, holding in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by His Majesty the King in

---

* Prepared by the Department of External Affairs.

Great Britain", and that "it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs". Simultaneously with this change in the constitutional relationship between the several parts of the British Commonwealth of Nations there developed as a complementary aspect of nationhood the assumption by the several Dominions of further responsibilities and rights of sovereign States in thei relations with other members of the community of nations. Membership in the League o Nations and more recently in the United Nations, the exercise of treaty-making powers and the establishment of separate diplomatic representation in foreign countries have characterized this phase in the growth of Canada. More explicit recognition of the implication of the principles of equality of status was accorded in the Statute of Westminster of 193 which provided for the removal of the remaining limitations on the legislative autonomy of the Commonwealth nations.

Thus Canada, under the Crown, has equality of status with the United Kingdom and the other Commonwealth nations in both domestic and foreign affairs; its Governmen advises the Crown in the person of the Governor General on all matters relating to Canada Canada has membership in the United Nations; makes its own treaties; appoints it own ambassadors and other representatives abroad; levies its own taxes; makes its ow laws which are executed by a government dependent on the will of a majority of the people and maintains its own naval, military and air forces. In short, Canada has achieved ful status of democratic nationhood within the Commonwealth of Nations.

Canada's International Status.—The growth of Canada's international status i reflected in the development of the Department of External Affairs. A review of th organization and development of that Department is given in the 1952-53 Year Book pp. 101-104; a brief outline is given at p. 98 of this volume.

The following Section 1 covers Canadian diplomatic representation abroad and representation of other countries in Canada. Section 2 deals with Canada's main international activities during 1960 with respect specifically to the Commonwealth, the Unite Nations, and the North Atlantic Treaty Organization. International economic ai programs are covered separately. Although these fields are considered to be the mos significant for the purposes of this publication, it should be noted that Canada's activitie in other areas are also of importance. The *External Affairs Monthly Bulletin** covers a activities of the Department on a detailed, monthly basis.

Section 1.—Diplomatic Representation as at Jan. 1, 1961

NOTE.—Changes in this listing subsequent to Jan. 1, 1961 and names of current Representatives are given *Canadian Representatives Abroad and Representatives of Other Countries in Canada*, published quarterly and obtainab from the Queen's Printer, Ottawa, price 35 cents.

1.—Canadian Representation Abroad

Country and Year Representation Established	Present Status of Representative	Address
Argentina....................1941	Ambassador..................	Bärtolomé Mitre, 478, Buenos Aires
Australia....................1939	High Commissioner..........	State Circle, Canberra
Austria.......................1952	Ambassador..................	Kärntnerring 5, Vienna
Belgium......................1939	Ambassador..................	35, rue de la Science, Brussels
Brazil.........................1941	Ambassador..................	Avenida Presidente Wilson, 165, Rio Janeiro
Burma.......................1958	Ambassador..................	c/o Office of the High Commissioner f Canada, Kuala Lumpur, Malaya (P. Box 990)
Ceylon.......................1953	High Commissioner..........	6 Gregory's Road, Cinnamon Garde Colombo
Chile.........................1942	Ambassador..................	Augustinas 1225, 5th floor, Santiago
Colombia....................1953	Ambassador..................	Carrera 10, 16-92, 8th Floor, (P.O. B Apartado 1618), Bogota
Cuba.........................1945	Ambassador..................	Edificio Ingenieros Civiles, Calle O y Vedado, Havana

1.—Canadian Representation Abroad—continued

Country and Year Representation Established	Present Status of Representative	Address
Czechoslovakia 1943	Minister	Mickiewiczova 6, Prague 6
Denmark 1946	Ambassador	Prinsesse Maries Allé 2, Copenhagen
Dominican Republic 1954	Ambassador	408 Calle El Conde, Ciudad Trujillo
Finland 1949	Ambassador	Borgmastärbrinken C-3, 32, Helsinki
France 1928	Ambassador	35, avenue Montaigne, Paris VIII
Germany 1950	Ambassador	Zitelmannstrasse 22, Bonn
Ghana 1957	High Commissioner	E 115/3 Independence Avenue (Dodowah Road), Accra
Greece 1943	Ambassador	31, avenue Vassilissis Sofias, Athens
Haiti 1954	Ambassador	Route du Canapé Vert, St. Louis de Turgeau, Port-au-Prince
Iceland 1949	Ambassador	c/o Canadian Embassy, Fridtjof Nansens Plass 5, Oslo, Norway
India 1947	High Commissioner	4 Aurangzeb Road, New Delhi
Indonesia 1953	Ambassador	Djalan Budi Kemuliaan No. 6, Djakarta
Iran 1958	Ambassador	Avenue Anatole France at Blvd. Abé Karaj (P.O. Box 1610), Tehran
Ireland 1940	Ambassador	92 Merrion Square West, Dublin
Israel 1953	Ambassador	Farmers' Bldg., 8 Rehov Hakirya, Tel Aviv
Italy 1947	Ambassador	Via G. B. de Rossi 27, Rome
Japan 1929	Ambassador	16 Omote-Machi, 3-Chome, Akasaka Minato-ku, Tokyo
Lebanon 1954	Ambassador	Immeuble Alpha, rue Clemenceau, Beirut
Luxembourg 1945	Ambassador	c/o Canadian Embassy, 35, rue de la Science, Brussels, Belgium
Malaya 1958	High Commissioner	Kuala Lumpur (P.O. Box 990)
Mexico 1944	Ambassador	Melchor Ocampo 463-7, Mexico 5, D.F.
Netherlands 1939	Ambassador	5 and 7 Sophialaan, The Hague
New Zealand 1940	High Commissioner	Government Life Insurance Bldg., Customhouse Quay, C.I. Wellington
Nigeria 1960	High Commissioner	New Barclays Bank Bldg., 40 Marina Drive, Lagos
Norway 1943	Ambassador	Fridtjof Nansens Plass 5, Oslo
Pakistan 1950	High Commissioner	Metropole Hotel, Victoria Road, Karachi
Peru 1944	Ambassador	Edificio Boza, Carabaya 831, Plaza San Martin, Lima
Poland 1943	Ambassador	31 Ulica Katowicka, Saska Kepa, Warsaw
Portugal 1952	Ambassador	Rua Marques da Fronteira No. 8 Lisbon
Spain 1953	Ambassador	Edificio España, Plaza de España 2, Madrid
Sweden 1947	Ambassador	Strandvagon 7-C, Stockholm
Switzerland 1947	Ambassador	88 Kirchenfeldstrasse, Berne
Turkey 1947	Ambassador	Ahmet Agaoglu Sokagi, No. 32, Cankaya, Ankara
Union of South Africa 1940	High Commissioner	Kerry Bldg., 238 Vermeulen St., Pretoria
Union of Soviet Socialist Republics 1943	Ambassador	23 Starokonyushenny Pereulok, Moscow
United Arab Republic 1954	Ambassador	6 Sharia Roustom Pasha, Garden City, Cairo
United Kingdom 1880	High Commissioner	Canada House, Trafalgar Square, London, S.W. 1
United States of America 1927	Ambassador	1746 Massachusetts Avenue, N.W., Washington, D.C.
Uruguay 1952	Chargé d'Affaires *ad interim*	1409 Avenida Agraciada, Piso 7°, Montevideo
Venezuela 1952	Ambassador	Avenida La Estancia No. 10, Caracas
West Indies 1958	Commissioner	Colonial Bldg., 72 South Quay, Port-of-Spain, Trinidad
Yugoslavia 1943	Ambassador	Proliterskih Brigada 69, Belgrade
Other Missions		
Canadian Military Mission (1946)	Head of Mission	Perthshire Block, Olympic Stadium, Headquarters Berlin, (British Sector)
Canadian Delegation to the North Atlantic Council (1952) and Organization for European Economic Co-operation (1950)	Ambassador	1 rue Chavez, Paris XVI
Mission of Canada to the European Communities (1960)	Representative and Ambassador	35, rue de la Science, Brussels 4
Permanent Delegation of Canada to the United Nations (1948)	Permanent Representative	750 Third Avenue, New York, N.Y.
Permanent Delegation of Canada to European Office of the United Nations (1948)	Permanent Representative	16, Parc du Chateau Banquet, Geneva

Section 2.—International Activities, 1960

Subsection I.—Canada and Commonwealth Relations

Present-day Commonwealth association is based on many things; one of the most important is the constant process of consultation and exchange of views that goes on among Commonwealth Governments in the various Capitals and at the United Nations and other international gatherings. The fact that, by its very nature, such exchange attracts little public attention does not diminish its significance.

In addition to normal Commonwealth discussions, several special Commonwealth meetings took place in 1960; the most important was undoubtedly the conference of Commonwealth Prime Ministers held in London in May, which was attended by Prime Minister Diefenbaker. Affairs in Africa occupied a significant place at this conference. It was agreed that study of a Commonwealth aid program for Africa should be initiated. Ghana gave notice that it intended to adopt a republican constitution but wished to remain in the Commonwealth; the Prime Ministers agreed to this. The Union of South Africa indicated that it too might become a republic following a plebiscite to be held on the subject; the Prime Ministers agreed that their decision on continued South African membership under such a changed status should be postponed until after the plebiscite. The Prime Ministers also agreed that Nigeria should become a full member of the Commonwealth after achieving its independence.

Discussion about the effectiveness of the Commonwealth if membership continues to expand led to the appointment of a Study Group to examine the question of future Commonwealth membership. The problems posed for the Commonwealth by the growth of European trading blocs and the United Kingdom's relationship to them were considered, as well as the possibility of creating a Commonwealth scheme for the exchange of administrative and technical experts. Numerous other matters of interest to Commonwealth countries were discussed, always in the informal and intimate atmosphere which makes Commonwealth Prime Ministers' meetings so valuable to all.

Another Commonwealth conference of significance was the meeting of the Commonwealth Economic Consultative Council held in London in September 1960. The Minister of Finance led the Canadian delegation. At this conference details of the Special Commonwealth African Aid Programme (SCAAP) were worked out and further consideration was given to the emergence of the European Common Market and the European Free Trade Association as important factors on the economic scene of Europe.

An important occasion for the Commonwealth was the attainment of full sovereign independence within the Commonwealth by the Federation of Nigeria on Oct. 1, 1960. As the most populous country in Africa, Nigeria is bound to play an important role in the Commonwealth and elsewhere in world affairs. The Federation's Prime Minister, Sir Abubakar Tafawa Balewa, has made it clear that his country attaches great importance to its Commonwealth membership. The Minister of Finance represented Canada at the Independence Day celebrations in Lagos. Canada is represented in Nigeria on a permanent basis by a High Commissioner whose office was opened early in 1960.

The Commonwealth Scholarship and Fellowship Scheme began to operate during 1960. This scheme is the result of a decision taken at the Commonwealth Trade and Economic Conference held at Montreal in 1958. Details were worked out at the Commonwealth Conference on Education at Oxford in 1959. More than 100 Commonwealth Scholars from many different Commonwealth countries are now studying at Canadian universities. It is expected that Canada will ultimately be awarding 250 of these scholarships each year, and that a total of 1,000 Commonwealth Scholars and Fellows, including Canadians, will be studying in other Commonwealth countries in any one year. This scheme will assist the newly independent Commonwealth States in a most important way and should do much to strengthen Commonwealth ties.

Canada welcomed several distinguished Commonwealth visitors during the latter half of 1959 and 1960, including Mr. R. G. Menzies, Prime Minister of Australia; Tunku Abdul Rahman, Prime Minister of the Federation of Malaya; Sir Ahmadu Bello, Sardauna of Sokoto and Premier of the Northern Region of Nigeria; and Lord Kilmuir, Lord Chancellor of the United Kingdom.

Subsection 2.—Canada and the United Nations

At the beginning of 1960, the members of the United Nations held a reasonable expectation that improved East-West relations would be reflected in progress in the United Nations along lines foreshadowed at the General Assembly in 1959. However, their expectations were dissipated by the failure of the Summit meeting in May, the consequent departure of the Soviet Bloc from the Ten-Nation Disarmament Committee in June, and the crisis in the Congo which continued throughout the second half of 1960.

These factors, together with the prospect of a change in administration in the United States, combined to make the 15th regular session of the General Assembly one of the least productive in the history of the United Nations. The session, which convened in September as usual, was unique in that it began with an *ad hoc* meeting of Heads of Government, which was marked by Mr. Krushchov's strong attack on the Secretary-General and on the structure of the Secretariat. Of the issues facing the 15th session, Canada was particularly interested in the question of arrangements to implement the concepts of an international "food bank" and an international "experts' bank"; the possibility of an expansion of the Security and the Economic and Social Councils in the light of increases in the membership of the United Nations; and in the problem of mustering adequate financial and political support for the United Nations operations in the Congo. In the field of disarmament, Canada pursued an initiative taken at a meeting of the Disarmament Commission in August by continuing to press for the earliest possible resumption of disarmament negotiations, and suggested, among other things, machinery designed to give the middle and smaller powers particularly an opportunity to contribute to the encouragement of disarmament negotiations. The Assembly found itself unable to complete its business in the normal way and adjourned on Dec. 20 after a decision to resume its work on Mar. 7, 1961.

Although it had been strengthened towards the close of 1960 by the addition of 17 new members, mainly from Africa, the United Nations found itself unable to make progress in any important direction. At the end of the year, the effectiveness and the future of United Nations operations in the Congo remained in doubt; the organization's working procedures and certain aspects of its basic structure stood in need of thoughtful review, particularly in the light of increases in membership; its financial position continued to give cause for grave concern; it had proved unable to take positive action to bring about the resumption of East-West contacts either at the Summit or in the field of disarmament;

and it had been obliged to adopt the unusual expedient of deferring a good portion of the work of the General Assembly to a resumed session. The year, which had begun so hopefully, ended with the United Nations facing one of the most difficult and discouraging prospects in its history.

Although not a member of any of the Councils of the United Nations in 1960, Canada followed developments in the Councils with close attention. The Security Council held 71 meetings during 1960, of which 31 were devoted to the situation in the Congo. The Council adopted resolutions authorizing the Secretary-General to take the necessary steps to assist the Government and the people of the Congo to overcome the crisis which independence had precipitated in their country. Initially, the Great Powers were prepared to act together in the Security Council to deal with the situation in the Congo. Subsequently, however, fundamental disagreements between the Great Powers forced the General Assembly to meet in an emergency session in September to consider the Congo situation. Later in the year, during the 15th regular session of the General Assembly, the situation in the Congo was reviewed again, inconclusively. Although the members of the United Nations found great difficulty in agreeing on the proper course of action to take in the Congo, the Security Council and the General Assembly had succeeded, by the end of 1960, in authorizing the establishment in the Congo of a United Nations force of close to 20,000 troops, mainly from African member states, the creation of a special voluntary fund of $100,000,000 to provide emergency support for the civil administration of the Congo, and a generous measure of technical assistance organized with the cooperation of the Specialized Agencies of the United Nations.

During 1960, the Security Council dealt with charges brought against the United States by the U.S.S.R. which had to do with flights by a U-2 and an RB-47 aircraft of the United States. Draft resolutions submitted to the Council by the U.S.S.R. in both these cases were defeated. The matter was subsequently placed on the agenda of the 15th session of the General Assembly, but had not been discussed by the time the Assembly recessed at the end of 1960.

A complaint by Cuba against the United States was referred without a dissenting vote to the Organization of American States. Meetings were also held by the Security Council to hear a charge by Argentina against Israel concerning the Eichmann incident and charges by a number of nations against the Union of South Africa arising from racial incidents in the Union.

The Security Council recommended 17 new nations, mainly African, for membership in the United Nations. These applications were subsequently approved by the General Assembly, bringing the total membership of the organization to 99. The application of Mauritania for membership was vetoed by the Soviet Union, because of a refusal of the majority of members of the Security Council to accept the claim to membership of Outer Mongolia which had been concurrently pressed by the U.S.S.R.

During 1960, the membership of the Security Council was as follows: *Permanent Members*—China, France, the United Kingdom, the United States and the Union of Soviet Socialist Republics; *Non-permanent Members*—Argentina, Ceylon, Ecuador, Italy, Poland and Tunisia. Chile, Liberia and the United Arab Republic were elected at the end of 1960 to replace Argentina, Italy and Tunisia, respectively. In accordance with an agreement reached in 1959, Poland resigned its seat on Dec. 31, 1960 and was replaced by Turkey.

In 1958, Canada completed its most recent three-year term on the 24-member Economic and Social Council. As its name implies, this Council is responsible for international co-operation in the economic and social fields. The Council functions through its regional commissions, which are the Economic Commission for Europe (ECE), Asia and the Far East (ECAFE), Latin America (ECLA) and Africa (ECA). It is also assisted by functional commissions on the Status of Woman, Narcotic Drugs, International Commodity Trade, Population, Statistics, Transport and Communications, Human Rights and Social Conditions. At the end of 1960, Canada was a member of the first four of these commissions.

Canada is also a member of the Governing Council of the United Nations Special Fund, which originated in the Economic and Social Council and is intended to enlarge the scope of existing United Nations programs of assistance in such fields as surveys of water, mineral and potential power resources, the establishment of institutions of public administration, statistics and technology, and development of centres for agricultural and industrial research.

The Trusteeship Council, of which Canada has never been a member, supervises the administration of agreements between the United Nations and those member states which have responsibility for trust territories. The Council consists of the states that administer trust territories and an equal number of non-administering states, including permanent members of the Security Council not represented in the first group, and normally meets twice a year. At the end of 1960 membership of the Council was in imbalance because France, which no longer administers trust territories, remained a member of the Council.

Apart from considering reports from the administering authorities, the Council sends visiting missions to report on conditions in the various trust territories and, directly or through its Committee on Petitions, considers the many communications received from petitioners in the trust territories. The Council also assists the United Nations commissioners who are appointed when necessary by the General Assembly to supervise plebiscites arranged to permit the inhabitants of a particular trust territory to decide important questions concerning the future.

In 1960, three territories emerged from trusteeship, achieved their independence and became members of the United Nations. Togoland and the Republic of the Cameroons had been trust territories previously administered by France; Somalia, along with the former protectorate of British Somaliland, had been a trust territory under Italian administration. Also in 1960, the General Assembly approved the holding of a plebiscite under United Nations supervision in Western Samoa, a trust territory under New Zealand administration, to determine whether the inhabitants wish their territory to become independent on Jan. 1, 1962. A second plebiscite was also approved to be held in the Northern and Southern Cameroons, a trust territory under British administration, to determine whether the inhabitants of this territory wish to merge with the Republic of the Cameroons or with Nigeria. Arrangements were also made to hold elections under United Nations supervision in the Belgian-administered territory of Ruanda-Urundi and to follow the progress of the territory toward independence.

Canadian Financial Contributions to the United Nations.—Canada's assessed share of the costs of United Nations peace-keeping operations in the Congo and the Middle East amounted to approximately $2,200,000 in 1960. In addition, Canada provided air transport facilities, at a cost of about $650,000, to move troops into the Congo. The country's share of the remaining expenses of the United Nations in 1960 was 3.11 p.c. of a net budget of approximately $60,000,000, or some $1,900,000, with an additional $1,800,000 going to the regular assessed budgets of the various Specialized Agencies. A voluntary grant of $1,000,000 was also made to United Nations civilian operations in the Congo.

A number of voluntary programs of assistance are carried on by the United Nations and its Specialized Agencies to which Canada contributed the following in 1960:—

	$
Expanded Programme of Technical Assistance (EPTA)	2,000,000
United Nations Children's Fund (UNICEF)	671,000
United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA), including $2,500,000 worth of wheat flour	3,060,000
United Nations High Commissioner for Refugees (UNHCR)	299,000
Special Fund	2,000,000

As a special contribution to World Refugee Year, Canada had, by the end of 1960, admitted two groups of tubercular refugees totalling with their families 553 persons. So successful has been this program that arrangements are being made to admit a third such group. Voluntary donations from private citizens to WRY are expected to total over $1,000,000.

Specialized Agencies.—Canada is a member of all twelve of the Specialized Agencies of the United Nations. These agencies are bodies with wide international responsibilities established by intergovernmental agreement, which act in relationship with the United Nations in order to carry out the aims of the Charter. Co-ordination of the activities of the Specialized Agencies is promoted by the Administrative Committee on Co-ordination established by the Economic and Social Council.

Canada is also a member of the International Atomic Energy Agency which, while not a Specialized Agency, plans its activities with them and co-operates in its work with the Administrative Committee on Co-ordination.

International Labour Organization.—The International Labour Organization was originally associated with the League of Nations, becoming a Specialized Agency of the United Nations in 1946. It brings together representatives of governments, employers and workers from member states in an attempt to promote social justice by improving working and living conditions in all parts of the world. To further this goal, meetings are held, usually on an annual basis, the last of which took place in Geneva in June of 1960. ILO is responsible for the execution of a number of training projects which are financed by the United Nations Special Fund.

As one of the leading industrial countries of the world, Canada is permanently represented on the Governing Body of ILO. (See also Section 10 of the Labour Chapter of this volume.)

World Health Organization.—The World Health Organization, which came into being in 1948, is one of the largest of the Specialized Agencies of the United Nations with a membership of 100. Functioning through the World Health Assembly, an organization composed of an Executive Board, a Secretariat and six Regional Committees, WHO acts as a directing and co-ordinating authority on international health matters. In addition, it provides advisory and technical services to help countries develop and improve their health services. The 13th World Health Assembly was held in Geneva in May 1960. (See also the item "International Health" in Subsection 1, Section 1, Part I of the Public Health, Welfare and Social Security Chapter of this volume.)

Food and Agriculture Organization.—The Food and Agriculture Organization was established in 1945 with the objectives of raising the levels of nutrition and living standards among its members and improving the techniques of the production and distribution of food, agricultural, fisheries and forestry products. To this end FAO collects, analyzes and distributes technical and economic information and encourages appropriate national and international action.

A 25-member Council, on which Canada has served since 1945, meets twice a year to give direction and policy guidance to the Secretariat; the Conference, the governing body of the Organization, meets every other year. The 10th conference took place in Rome late in 1959. (See also Subsection 3, Section 1 of the Agriculture Chapter of this volume.)

The United Nations Educational, Scientific and Cultural Organization.—The United Nations Educational, Scientific and Cultural Organization (UNESCO) was established in 1946 "to contribute to peace and security by promoting collaboration among the nations through education, science and culture in order to further universal respect for justice, for the rule of law, for human rights and fundamental freedoms".

Total membership in the Organization includes 98 states and six associate members. The Organization is made up of three principal organs—the General Conference, which is the policy-making body, the Executive Board and the Secretariat. Representatives from member states make up the General Conference which meets every two years to consider applications for membership, elect the Executive Board, plan the program and approve the budget for the ensuing two-year period. The last General Conference was held at the Headquarters of the Organization in Paris in November and December 1960. (See also Section 4 of Part II of the Education and Research Chapter of this volume.)

International Civil Aviation Organization.—The International Civil Aviation Organization (ICAO), with headquarters in Montreal, is the only Specialized Agency of the United Nations with headquarters in Canada. Canada has been a member of the 21-nation Council, which has sat in almost continuous session in Montreal, since ICAO was provisionally established in 1945. Since 1959 Mr. R. M. Macdonnell, a Canadian who was formerly Deputy Under-Secretary in the Department of External Affairs, has been Secretary-General of ICAO. (See also the item "International Air Agreements", Section 1, Part V of the Transportation Chapter of this volume.)

World Meteorological Organization.—Canada is a member of the World Meteorological Organization (WMO), a Specialized Agency of the United Nations since 1951 but developed from the International Meteorological Organization which was founded in 1878. During the year Mr. P. D. McTaggart-Cowan, Director of Meteorological Services, Department of Transport, was elected to the Executive Committee of WMO and attended the 12th session of the Executive Committee held in WMO's new headquarters building in Geneva in the summer of 1960. The Commission for Maritime Meteorology, one of the subsidiary bodies of WMO, held its fourth session in Utrecht, Holland, in August. Canada was represented by the Vice-President of the Commission, Mr. K. T. McLeod of the Department of Transport.

International Telecommunication Union.—Canada is a member of the International Telecommunication Union (ITU), a Specialized Agency of the United Nations, which traces its origin to the International Telegraph Convention of 1865 and the International Radio Telegraph Convention of 1906. During 1960, the Administrative Council of the ITU met in Geneva in the summer and the International Telegraph and Telephone Consultative Committee, one of the two international consultative committees of the ITU, met in New Delhi, India, late in the year; Canada was represented at both meetings.

Intergovernmental Maritime Consultative Organization.—Canada, as a member of the Intergovernmental Maritime Consultative Organization (IMCO), with headquarters in London, England, sent a large delegation to the International Conference convened in London under IMCO auspices in the early summer of 1960 to amend the International Convention on Safety of Life at Sea, 1948. Canada was one of the countries that signed, subject to ratification, the 1960 Convention, which, when ratified by a sufficient number of countries, will replace the 1948 Convention. In addition, Canada, as a member of the IMCO Council and of the Maritime Safety Committee of IMCO, attended meetings of these subsidiary bodies of IMCO held in London during the year.

The International Monetary Fund.—The International Monetary Fund, set up by the Bretton Woods Conference of 1944, came into being in 1945. It provides machinery for international consultation and collaboration on monetary, payments and exchange problems. Included in these purposes are the promotion of exchange stability, the elimination of exchange restrictions, the establishment of a multilateral system of current payments and the expansion and balanced growth of international trade. Also, member countries under certain conditions may draw on the resources of the Fund, which now amount to some $14,000,000,000. Canada has been represented on the Fund's Board of Executive Directors since 1945.

International Bank for Reconstruction and Development.—The International Bank for Reconstruction and Development (IBRD) was formed at the same time as the International Monetary Fund for three main purposes: (1) to facilitate the investment of capital for productive purposes; (2) to promote private foreign investment by means of guarantees or of participation in loans by private investors; and (3) to make loans when private capital is not available on reasonable terms. Since its inception, the Bank has made over 250 loans in some 50 countries in the aggregate of $5,000,000,000. Canada's subscription to the Bank was raised from $375,000,000 to $750,000,000 in 1959.

The International Finance Corporation.—The function of the International Finance Corporation, which is an affiliate of the IBRD, is to promote the growth of productive private enterprise by assisting private capital, by acting as a clearing house in bringing together investment opportunities and private capital and by helping to enlist managerial skill and experience when not otherwise available to a project. Canada has subscribed $3,520,000 to the capital of the Corporation.

The International Development Association.—The International Development Association, created in 1960 as an affiliate of the IBRD, exists to promote economic development in the less developed parts of the world. To this end the Association, using funds subscribed by member governments, makes loans, usually for long terms and at low interest rates. Its terms are more flexible and bear less heavily on the balance of payments of borrowers than conventional loans. Canada's contribution to the Association is $37,830,000.

Universal Postal Union.—One of the oldest and largest of the Specialized Agencies, the Universal Postal Union (UPU), was founded in Berne in 1874 with the principal aim of improving postal services throughout the world and promoting international collaboration. The Universal Postal Congress is the supreme authority of the UPU and meets every five years to review the Universal Postal Convention and its subsidiary instruments. In the interim, activities of the Union are carried on by an Executive and Liaison Committee, a Consultative Committee on Postal Studies and an International Bureau. At the Congress held in Ottawa in 1958, Canada was elected to the Executive and Liaison Committee.

The International Atomic Energy Agency.—Formed in 1957, the International Atomic Energy Agency (IAEA) is an autonomous international organization under the aegis of the United Nations. The Agency was given a mandate to seek to accelerate and enlarge the contribution of atomic energy to peace, health and prosperity throughout the world in a variety of ways.

Because Canada is considered to be one of the five members most advanced in nuclear technology including the production of source materials, this country has served on the Board of Governors since the inception of the Agency. The latest meeting of the organization was held in Vienna in October 1960.

The International Court of Justice.—To "adjust and settle international disputes in conformity with Justice and International Law" is one of the purposes of the United Nations and it was therefore essential to establish a judicial arm for the Organization. The Statute of the International Court of Justice is an integral part of the Charter of the United Nations. All members of the United Nations are *ipso facto* parties to the Statute of the Court. A state that is not a member of the United Nations may, nevertheless, become a party to the Statute of the Court on conditions to be determined in each case by the General Assembly upon the recommendation of the Security Council. Thus at the end of 1960, the total number of parties to the Statute was 102; 99 were members of the United Nations and three (Liechtenstein, San Marino and Switzerland) were non-members. The Court is composed of 15 judges who are elected in individual capacities. His Honour Judge John E. Read of Canada served on the Court from his election to the Court in 1946 until his retirement in 1958. No judge of Canadian nationality is serving on the Court at the present time.

Subsection 3.—Canada and the North Atlantic Treaty Organization*

During 1959-60, the North Atlantic Council continued in permanent session at Paris under the chairmanship of the Secretary-General, Mr. Paul-Henri Spaak. The Canadian Permanent Representative was Mr. Jules Léger, former Under-Secretary of State for External Affairs.

Two Ministerial meetings of the Council were convened during 1959. The regular spring meeting of Foreign Ministers was held in Washington, Apr. 2-4. A special ceremony at the opening session marked the 10th anniversary of the Treaty, which was signed in Washington on Apr. 4, 1949. The Council directed its attention to the central problem posed by the Soviet Union's pronouncements on Berlin and Germany. Discussion centred mainly on the Western position for the negotiations with the Soviet Union scheduled to commence at Geneva later in the spring, upon which there was general agreement The Ministers expressed desire to see outstanding problems solved by negotiation and confirmed the principles contained in the Council's declaration on Berlin of Dec. 16, 1958

The year's work of the Council culminated with the meeting of Foreign, Defence and Finance Ministers held in Paris, Dec. 15-17 and again on Dec. 22 following a meeting during the intervening period of the Heads of Government of the United States, the United Kingdom, France and the Federal Republic of Germany to consider preparations for an East-West Summit conference. In addition, the Foreign Ministers of the United States, the United Kingdom, France, Italy and Canada met on Dec. 21 to discuss arrangements for convening the Ten-Nation Disarmament Committee. The NATO Ministeria meeting was therefore concerned not only with its traditional review of the internationa situation and current NATO defence problems but with the more important matters relating to the forthcoming East-West Summit negotiations and preparation for negotiations with the Soviet Union on disarmament, both in the Ten-Nation Disarmament Committee and at the Summit. Agreement was reached on the arrangements for convening the Summit conference and the meetings of the Disarmament Committee, and for ensuring that there would be full consultation with NATO in preparing the Western position fo these meetings.

On the invitation of the Government of Turkey, the Foreign Ministers convened in Istanbul, May 2-4, 1960, for their annual spring meeting which was devoted mainly to an examination of the proposed position to be adopted by the three Western negotiating powers at the forthcoming Summit conference. After a full discussion, agreement wa reached on the broad lines of the Western position on the central issues of disarmament— Germany and Berlin, and East-West relations. Earlier, at the end of March, a specia meeting of Defence Ministers was held in Paris to review important defence problem and the action taken to implement earlier decisions of the Council in the defence field.

The 1960 annual meeting of Foreign, Defence and Finance Ministers was held i Paris, Dec. 16-18. They reviewed international developments since the failure of th Summit conference, reaffirmed their views on Germany and Berlin and East-West relations and expressed hope for the early resumption of negotiations on disarmament. On the subject of defence they agreed on the importance of maintaining a proper balanc between the conventional and nuclear strength of the NATO forces; they noted with interest a concept for a multilateral MRBM force suggested by the United States an instructed the Permanent Representatives to study it and related matters in detai In addition, they welcomed the assurance of the United States to maintain in the NATO area nuclear weapons made available to NATO.

The meeting also examined problems related to the non-military aspects of long-term planning and underlined the importance of pursuing comprehensive political consultations designed to achieve the closest possible co-ordination of national views an unity of action.

---

* The terms of the Treaty and the organization of the Council and subordinate committees are dealt with i the 1954 Year Book at pp. 113-115. A short review of the events leading up to the establishment of NATO and i subsequent membership is given in the 1960 Year Book at p. 167.

Throughout the year, the Permanent Council, together with its subordinate committees and its international staff, continued to devote its attention to international, political, economic and military developments of direct concern to the Alliance, reviewed the defence plans of its members, dealt with expenditures of funds on commonly financed military installations (infrastructure) and studied the measures required to ensure peacetime readiness and civil defence.

Canadian Contributions to NATO.—Canada continued in 1959-60 to provide contributions of Armed Forces to unified NATO commands, material assistance to other NATO countries and financial contributions to NATO common budgets. The Canadian contribution to the integrated forces in Europe comprised an Infantry Brigade Group stationed in Germany and an Air Division of twelve modern jet fighter squadrons at bases in France and Germany. During 1959 the Canadian Government decided to re-equip the eight day-fighter squadrons of the Air Division with a modern strike and reconnaissance aircraft, the CF-104. With the establishment of the North American Air Defence Command (NORAD) in 1958, Canada participated fully with the United States in the defence of the North American Continent, which harbours the main retaliatory forces of the Alliance and is an integral part of the NATO area. In addition, a substantial part of Canada's naval forces has been assigned to the Supreme Allied Commander Atlantic (SACLANT) for the protection of convoys and for the defence of the Canada–United States region, should an emergency arise.

Canada continued to provide assistance to NATO European countries in the form of military equipment, aircrew training, logistic support for material previously transferred, and contributions to NATO military and common infrastructure budgets. Approximately $1,700,000,000 has been allocated for these purposes since 1950. After a peak of $289,000,000 in the year ended Mar. 31, 1954, the annual dollar value of the Canadian Mutual Aid Programme declined to an estimated $54,000,000 for the fiscal year 1960-61. This decline was accounted for by the gradual depletion of Canadian surplus stocks of weapons and equipment, and by the successful completion in July 1958 of the full-scale NATO Air Training Plan carried out at RCAF establishments in Canada; under this training plan, started in 1950, more than 5,500 pilots and navigators from ten member countries have been graduated. A limited number of aircrew from Norway and Denmark are continuing their training in Canada under special agreements.

While changing conditions and requirements have gradually altered the magnitude and content of Canada's Mutual Aid Programme, it continues to play an important role in the build-up of NATO military strength.

Subsection 4.—Canadian External Aid Programs

The Colombo Plan.—The Colombo Plan for Co-operative Economic Development in South and Southeast Asia was conceived at the Commonwealth Meeting of Foreign Ministers held at Colombo, Ceylon, Jan. 9-14, 1950. Although the Colombo Plan was initiated by Commonwealth governments, it is not exclusively a Commonwealth program. It is designed to assist in the economic development and raising of living standards of all countries and territories in the general area of south and southeast Asia. Its membership now includes Australia, Burma, Cambodia, Canada, Ceylon, India, Indonesia, Japan, Laos, Malaya, Nepal, New Zealand, North Borneo, Pakistan, the Philippines, Sarawak, Singapore, Thailand, the United Kingdom and Viet Nam, as well as the United States which is also engaged in a substantial program of economic aid in the same region.

The Colombo Plan is supervised by a Consultative Committee composed of Ministers of the member countries, who meet once a year to review projects, exchange views on policy matters and prepare an annual report. It is, as its name implies, a "consultative" body; no collective policy decisions binding member countries are taken at its meetings. A Council for Technical Co-operation, on which Canada is represented, meets regularly in Ceylon to develop the technical co-operation program of the Colombo Plan. Colomb Plan Day will be celebrated throughout member countries on July 1, 1961 to commemorat the tenth year of Colombo Plan operations.

From inception of the Plan in 1950 through April 1961, Canada will have mad available a total of $331,670,000 for capital and technical assistance projects in south an southeast Asia. At the Commonwealth Trade and Economic Conference held in Montrea in September 1958, Canada announced an increase from $35,000,000 to $50,000,000 i its annual contribution to the Colombo Plan over three years beginning in the year 1959-60

While ten countries are now receiving capital assistance from Canada, the larges contributions have so far been made to India, Pakistan and Ceylon. The Canadia contribution has consisted primarily of direct assistance to various development projects including equipment for multi-purpose irrigation and hydro-electric projects, power generating plants, construction and fisheries projects and resources surveys, as well as educational and laboratory equipment and books. It has also included gifts of raw materials, commodities and foodstuffs, such as industrial metals, asbestos, fertilizer, wheat, flour and butter, from the local sale of which recipient governments have been able to raise funds to meet local costs of economic development projects.

Under the Technical Assistance Program up to October 1960, more than 1,500 persons from all countries in the area had come to Canada for training in a variety of fields, the major ones being public administration and finance, agriculture, co-operatives, engineering, mining and geology, statistics, health, education and social welfare. More than 165 Canadian experts had been sent abroad for service in Colombo Plan countries in such fields as fisheries, agriculture, engineering, mining and prospecting, co-operatives, public administration, education and vocational training, and public health. Other Canadians were employed on aerial resources survey teams and in the installation and operation of capital equipment.

The Consultative Committee of the Colombo Plan held annual meetings at Singapore in 1955, at Wellington in 1956, at Saigon in 1957, at Seattle in 1958, at Jogjakarta in 1959 and at Tokyo in 1960. At the Jogjakarta meeting it was agreed that the Colombo Plan should be extended for another five years from June 1961. Reports of the Committee on progress and future plans are published after each annual meeting; each report also contains sections describing the activities of member countries.

Canada-West Indies Aid Program.—On the attaining of independence of the Federation of the West Indies in 1958, Canada undertook a $10,000,000 program of economic and technical assistance over the period from 1958 to 1963. The first major project in this program is the provision of two passenger-cargo ships for inter-island transportation. A total of $6,250,000 has been earmarked for this project. The vessels are under construction and are expected to be commissioned by the summer of 1961. Tools and equipment valued at $22,000 have also been supplied to a technical school at St. Kitts.

Up to Oct. 31, 1960, training programs had been arranged for 38 individuals from the West Indies in different fields, including public administration, information services, fisheries, etc. The 28 Canadian experts who undertook assignments during this period went to Trinidad, Jamaica, St. Lucia, St. Vincents and St. Kitts. They included soil surveyors and advisers in statistics, legal drafting, housing, education, films, radio broadcasting, postal services and harbour management.

Commonwealth Technical Assistance Program.—At the Commonwealth Trade and Economic Conference held in Montreal in September 1958, Canada announced a decision to provide funds for technical assistance to Commonwealth countries outside the Colombo Plan area, with particular emphasis on the African territories. By the end of March 1961 Canada will have made available $1,130,000 to this program. Ghana and Nigeria received the greatest amount of aid, although some assistance was extended also to British Guiana, Hong Kong and Sierra Leone.

By Oct. 31, 1960, 54 training programs had been arranged since the inception of the plan, the chief fields being agriculture, co-operatives, mining, geology, engineering, public and business administration, health and social welfare. Fourteen Canadians had undertaken advisory assignments in Ghana and Nigeria, in education, public information, public administration, law, and agriculture.

Co-operation with the United Nations and its Specialized Agencies, and with Other International Aid Programs.—In addition to the annual contributions made to the United Nations Expanded Program of Technical Assistance, Canada also assists by arranging training programs in Canada for individuals studying under the auspices of the different Specialized Agencies. This service is also extended to the technical assistance program of the International Co-operation Administration of the United States and to other international aid organizations as well. Up to Oct. 31, 1960, approximately 1,290 individuals had come to Canada through the various agencies from more than a hundred different countries in all parts of the world. Assistance is also given by recruiting Canadians for service with the Specialized Agencies on specific technical assistance assignments in underdeveloped countries.

Administration.—As of Nov. 9, 1960, the administration of Canada's external assistance programs became the responsibility of the External Aid Office, established by Order-in-Council of that date, and placed in charge of an officer known as the Director General of External Aid Programmes. The Director General is responsible to the Secretary of State for External Affairs for the operation and administration of such external assistance programs and related matters, including the Colombo Plan, the Canada–West Indies Aid Programme, the Special Commonwealth African Aid Programme, the Commonwealth Technical Assistance Programme, the Commonwealth Scholarship Scheme and Canadian contributions to aid programs administered by the United Nations and other international agencies.

CHAPTER III.—POPULATION*

CONSPECTUS

SECTION 4. STATISTICS OF WORLD POPULATION 176

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

This Chapter presents only a limited summary of the voluminous data on population recorded by the censuses of Canada. More detailed information and extended analyses are published in the Census volumes and bulletins, which are obtainable from the Queen's Printer or the Dominion Bureau of Statistics, Ottawa. A list of such publications and their prices is available on request.

Section 1.—Census of Population

Subsection 1.—History of the Census

A brief account of the early censuses of Canada is given under this heading in the 1956 Year Book at pp. 146-149. More detailed information on the history of census-taking in Canada may be found in Vol. XI (Administrative Report) of the 1951 Census of Canada, in the Administrative Report of the 1941 Census of Canada, and in Vol. I of the 1931 Census of Canada.

The 1961 Census of Canada.—Plans for the 1961 Census—Canada's Tenth Decennial Census since Confederation in 1867—are outlined in the 1960 edition of the Year Book at pp. 171-173. Statistical results of the 1961 Census will be issued in numerous series of reports as the tabulated information becomes available for such major fields of census coverage as population, housing, agriculture, and merchandising and service establishments. The 1962 edition of the Year Book will contain tables giving in summary form such results of the 1961 Census as are available at the time of preparation.

---

* Sections 1 and 2 of this Chapter have been revised in the Census (Demography) Division, Dominion Bureau of Statistics.

Subsection 2.—Growth and Density of the Population

The population history of Canada, from the first census in 1666 when 3,215 persons were enumerated to the 1956 Census when the figure was 16,080,791, reveals an outstanding rate of population growth. Although each census period contributed to this growth, the periods 1901-11, 1911-21, 1941-51 and 1951-56 merit particular mention.*

In the first half of the present century, Canada's population increased from 5,371,315 at the beginning of the period to just over 14,000,000 in 1951, or to 13,648,013 if Newfoundland is excluded. In the thirty years up to 1931 the population almost doubled and between 1931 and 1951 another 3,600,000 was added. The most rapid growth took place in the first decade of the century when the population increased by 1,835,000 and the rate of growth was slightly over one-third. Coincident with the settlement of the western provinces, substantial immigration characterized the whole period from the beginning of the century up to the outbreak of World War I; immigrants entering Canada during the first ten years of this period numbered 1,644,147.

Owing partly to the sharp falling off in immigration during the war years and partly to heavier emigration, the rate of increase of Canada's population in the decade 1911-21 was less than in the previous decade; nevertheless, total population advanced by 1,581,000 or about 22 p.c. It should be mentioned that, largely because of the record volume of immigration between 1911 and the outbreak of war, the actual number of immigrants to Canada during this decade was slightly greater than during the period 1901-11, although in terms of total population at the beginning of each of these periods immigration was a relatively less important factor in population growth in the decade 1911-21.

Population growth between 1921 and 1931 was approximately 1,590,000 or only slightly greater than in the previous decade. The rate of increase, at 18 p.c., was less than in the period 1911-21 and only a little more than half the rate recorded in the first decade of the century. Also it is significant that the rate of population growth in Eastern Canada was much closer to the rate of growth in Western Canada than in the period 1901-21. In the decade 1931-41 Canada's population increase, at 11 p.c., was the lowest recorded. Immigration over this decade was not much more than 150,000 or only about one-tenth of the number in each decade since 1901. The depressed conditions existing throughout most of the decade also resulted in a sharp falling off in marriages and in births. As a result, only 1,130,000 persons were added to the population of Canada over this ten-year period.

Despite the almost complete cessation of immigration during World War II, the decade 1941-51 was marked by a record growth in population numbers. Excluding Newfoundland, the increase amounted to 2,141,000. The rate of growth was just over 18 p.c. or about the same rate as was recorded in the census decade following World War I. Including Newfoundland, the rate of growth of the Canadian population in the period 1941-51 was 22 p.c., raising the Canada total as of June 1, 1951 to just over 14,000,000.

During the first five years of the second half of the present century Canada experienced an outstanding development of its economic resources. Reflecting this expansion, population, which in the ten years preceding the 1956 Census had risen by 3,374,000 or 27.4 p.c.,† continued to increase at a high rate over the years between the 1951 and 1956 Censuses. Slightly more than 2,000,000 persons were added to the population of Canada in this period, a 14.8-p.c. increase in five years, raising the total population to 16,080,791 on June 1, 1956. Net immigration accounted for almost 30 p.c. of the total increase in population since the 1951 Census, and natural increase for slightly over 70 p.c. In no comparable period of time in the past was the absolute size of net immigration as large as in this five-year period. In terms of the relative contribution of net immigration to population growth, only in the first decade of the century—when it accounted for 40 p.c. of the total population increase—did this element play a more important role than in the years since 1951.*

---

* An outline of the growth of population in Canada since the beginning of the seventeenth century may be found in Vol. I of the 1931 Census. Other accounts of population growth prior to the present century are included in Vol. I of the 1941 Census and Vol. X of the 1951 Census.

† Exclusive of Newfoundland since this province did not come into Confederation until 1949.

The record of population growth by provinces since 1901 given in Table 1 indicates the rapid expansion that took place in the Prairie Provinces up to 1921 and the slowing down in growth that followed during the 1920's and was greatly accentuated during the period 1931-56. It also shows that the Maritime Provinces as a group showed only a slight gain in population between 1901 and 1931—Prince Edward Island actually losing about 15,000 people over this period—and although a somewhat greater growth was experienced from 1931-51, another slow down occurred between the latter year and 1956; that the rate of population increase in Quebec by decades over the fifty years 1901-51 was consistently greater than in Ontario, the larger gains in the latter province resulting from net migration being more than offset by the higher rate of natural increase in Quebec, but that Ontario had taken the lead by 1956; and that the population of British Columbia recorded consistent and, in some decades, spectacular growth.

---

* More detailed information on the elements of population growth may be found in 1956 Census Report *Growth of Population in Canada* (Catalogue No. 99-501). See also Section 2, pp. 164-166 for Intercensal Surveys.

1.—Numerical Distribution of Population by Province, and Percentage Change from Preceding Census, Decennial Census Years 1901-51 and 1956

NOTE.—Populations for the decennial census years 1871, 1881 and 1891 are given in the 1956 Year Book, p. 149. The populations of the Prairie Provinces in 1906, 1916, 1926, 1936 and 1946 will be found in the 1951 edition, p. 131.

Province or Territory	1901	1911	1921	1931	1941	1951	1956
	NUMERICAL DISTRIBUTION

[1] Populations of Newfoundland (not part of Canada until 1949) were: 1901, 220,984; 1911, 242,619; 1921, 263,033; 1931, 281,500 (estimated); 1941, 303,300 (estimated); and 1945, 321,819. [2] Includes 485 members of the Royal Canadian Navy recorded separately in 1921.

The land area and density of the population per square mile is given by province in Table 2 for census years 1931, 1941, 1951 and 1956. It will be noted that the figures for 1951 and 1956 include the Province of Newfoundland, a fact that should be kept in mind in comparisons with earlier censuses.

2.—Land Area and Density of Population, by Province, Decennial Census Years 1931-51 and 1956

Note.—Certain population density figures in this table have been revised since published in Census Reports, as a result of changes in land areas.

Province or Territory	Land Area in Sq. Miles	Population, 1931		Population, 1941		Population, 1951		Population, 1956	
		Total	Per Sq. Mile	Total	Per Sq. Mile	Total	Per Sq. Mile	Total	Per Sq. Mile

[1] Includes Labrador. [2] Calculated on the basis of 1,958,409 sq. miles which excludes the land area of Newfoundland. [3] Includes Newfoundland. [4] Calculated on the basis of 3,417,193 sq. miles which excludes the land area of Newfoundland.

Subsection 3.—Rural and Urban Population

Before 1951 the population residing within the boundaries of all incorporated cities towns and villages of a province was classified by the census as urban and the remainder as rural. Since the laws governing incorporation vary among provinces, there was nc uniform line of demarcation between the rural and urban population throughout Canada. In the 1951 Census the aggregate number of residents within a given area, rather than provincial legal status, was the main criterion for the rural-urban classification. The population residing in cities, towns and villages of 1,000 or over, whether incorporated or unincorporated, as well as the population of all parts of census metropolitan areas, was defined as urban and that outside such localities as rural. The 1956 Census definition was substantially the same as that used in the Census of 1951 except that the fringe part of other major urban areas were classed as urban.

A change in the composition of urban size groups was made also for the 1956 Census At the 1951 Census, each municipality located within the boundaries of a census metro politan area was allocated to an urban size group according to its own individual size In 1956, each such municipality was classified to the same urban size group as the tota metropolitan area of which it formed a part. In addition, the fringe parts of other majo urban areas were included in the tabulations by urban size groups in the same manne as those of census metropolitan areas.

Table 3 presents the rural and urban population classified by province or territor for 1956. The rural population is further classified by farm and non-farm residence an the urban population by size of locality.

3.—Rural Population classified by Farm and Non-farm, and Urban Population classifie by Size Group, by Province, Census 1956

Province or Territory	Rural			Urban Size Groups				
	Farm[1]	Non-farm	Total	1,000 to 9,999	10,000 to 29,999	30,000 to 99,999	100,000 or Over	Total
Newfoundland	10,138	219,684	229,822	84,036	23,225	77,991	—	185,25

Northwest Territories	12	14,756	14,768	4,545	—	—	—	4,54
Canada	**2,631,587**	**2,734,349**	**5,365,936**	**1,996,646**	**1,020,830**	**1,471,440**	**6,225,939**	**10,714,85**

[1] Excludes 115,168 persons living on farms in localities classed as urban.

Populations of Counties and Census Divisions.—Population totals for countie and census divisions for the census years 1951 and 1956 are presented in Table 4. Corre sponding information for the census years 1901-41 is given in the 1952-53 Year Book a pp. 137-141. The 1956 populations of the subdivisions of the counties and census division may be found in Bulletins Nos. 1-1 to 1-5 of the 1956 Census of Canada (Catalogue No 92-501 to 92-505), and further details for the earlier census years in *Ninth Census* *Canada, 1951, Vol. I.*

For census purposes, metropolitan areas have been established for groups of urban communities that are in close economic, geographic and social relationship. The total population of each of the census metropolitan areas in 1956, with the comparable figure from the 1951 Census covering the same area as in 1956, is shown in Table 6. In this table the metropolitan area has been named after the largest city of the urban group.

6.—Populations of Census Metropolitan Areas at the 1956 Census, with Populations of Same Areas in 1951

Metropolitan Area	Population		Metropolitan Area	Population

[1] Newfoundland not included.

Of the 1,873 incorporated urban centres in Canada at the date of the latest census (June 1, 1956), 834 had a population of 1,000 or over. These are listed alphabetically by province in Table 8 with their 1956 populations and comparative figures for 1951.

8.—Incorporated Cities, Towns and Villages having Populations of 1,000 or Over in 1956, by Province, with Comparable Data for 1951

Note.—Provincial capital cities are marked by asterisk (*).

[1] Not incorporated in 1951. [2] Towns of Corner Brook E., Corner Brook W. and Curling amalgamat form part of Corner Brook city Jan. 1, 1956. [3] Rural district in 1951. [4] Rural municipality Léonard de Port Maurice in 1951. [5] Rural municipality in 1951. [6] Previous to 1953 called La Louis. [7] Rural municipality of St. Joseph de la Rivière des Prairies in 1951. [8] Rural municipal St. Joseph in 1951. [9] Previous to June 16, 1951 called Beauport E. [10] Improvement district in 195

Subsection 4.—Sex and Age Distribution

Sex.—The sex distribution of the Canadian people has been characterized early colonial times by a preponderance of males although this condition has been gre modified in more recent years. In 1666 during the early years of settlement by Fr immigrants 63.3 p.c. of the population were males. In 1784, when British immigratio Canada was commencing, there were 54,064 males and 50,759 females and by the mi of the nineteenth century there were 449,967 males to 440,294 females in Lower Ca and 499,067 males to 452,937 females in the more newly settled Upper Canada.

Since Confederation the newer sections of Canada—the west and the northwe have shown the greatest excess of males. From 1871 to 1941, for Canada as a w the proportion of males never dropped below 51 p.c. of the total population wherea Western Canada it varied between 53 p.c. and 59 p.c. By 1951, however, the propo of males to the total population had dropped to 50.6 p.c. for Canada as a whole an 1956 was 50.7 p.c.

9.—Sex Distribution of the Population, by Province, Census Years 1941, 1951 and 1956

NOTE.—Figures for the census years 1871–1931 are given in the 1948–49 Year Book, p. 150.

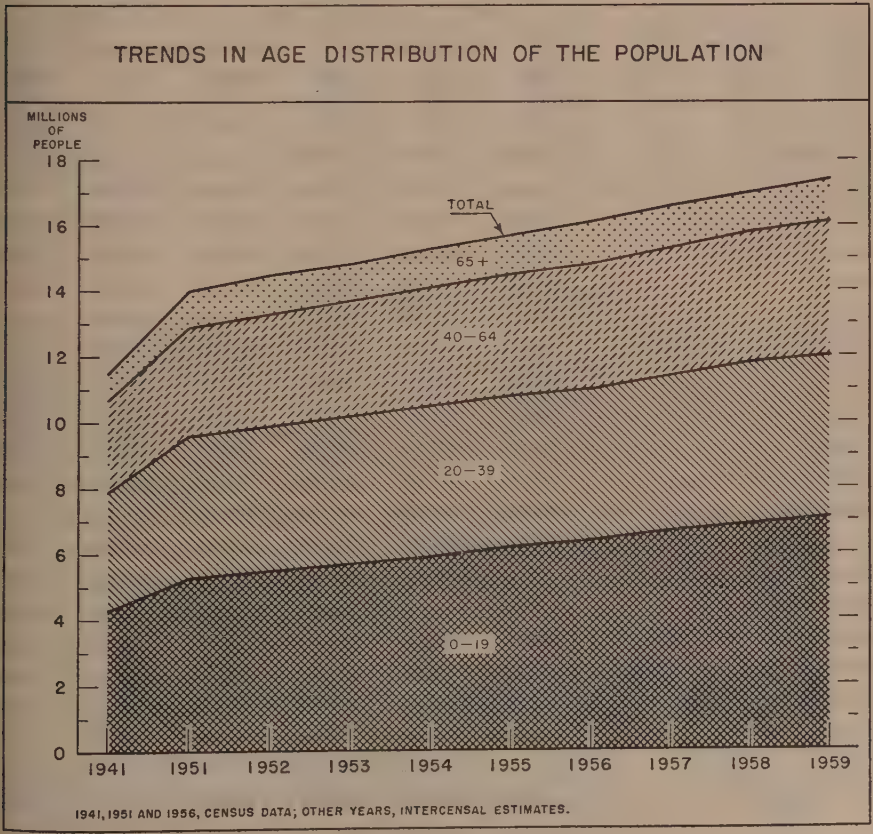
Age.—The age distribution of a population is fundamental to most, if not all, other analyses, for the age factor influences employment, marriage, birth rates and death rates, education, immigration, criminology, and a multitude of events and activities that are of great importance in the national life.



TRENDS IN AGE DISTRIBUTION OF THE POPULATION

1941, 1951 AND 1956, CENSUS DATA; OTHER YEARS, INTERCENSAL ESTIMATES.

Recent trends in vital rates and immigration have considerably changed the composition of the population of Canada. A high birth rate together with a low de rate among children added, between 1951 and 1956, nearly 1,000,000 to the populat under 15 years of age and raised the proportion of this group to the total population fr 30.3 p.c. to 32.5 p.c. On the other hand, the relative proportion of the working- groups—persons from 15 to 64 years of age—was 2 p.c. lower at 59.8 p.c. in 1956 than 1951 when 61.9 p.c. were in this age group. Without the influx of immigrants dur the 1951-56 period, the proportion of this productive group would have been much lo since a large part of it consists of the survivors of those born in the 1930's when bi rates were at their lowest. The proportion of persons 65 years of age or over was sligh less than 8 p.c. at both census dates.

Table **10** shows the population of Canada classified by five-year age groups and for the census years 1941, 1951 and 1956. The provincial distribution by specified groups as recorded in the 1956 Census is shown in Table **11**.

Subsection 5.—Marital Status

Next to the sex and age distribution of a population, that of marital status is probably most fundamental from a vital, economic and social viewpoint. The number of married females between 15 and 45 years of age is a most significant factor in the fertility of a population; if the proportion of females in this group is small, the expected proportion of births will also be small. In 1956, 64.3 p.c. of all married females were in the age group 15-44 years, as compared with 64.0 p.c. in 1951, 61.2 p.c. in 1941, and 63.5 p.c. in 1931. This trend indicates a movement towards conditions more favourable to a higher birth rate than those that existed during the period of world-wide depression.

The high birth rate of the period 1951-56, which has had such a decided effect on the increase in the total population and on its age composition, has also been an influence on the increase of 15.7 p.c. in the unmarried population. Most of this gain was in the population under 15 years of age. During the same period, the married population increased by 14.1 p.c., widowed by 10.5 p.c., and divorced by 14.9 p.c. Other striking statistics of marital status are the excess of married males over married females (largely owing to a preponderance of male immigrants whose wives had not yet joined them), the great preponderance of widows as compared to widowers, and the large and increasing number of divorced persons.

Subsection 6.—Origins and Birthplaces

Origins.—A population composed of diverse racial stocks gives rise to politi economic and social problems quite different in nature from those of one with a sn admixture of foreign elements although, to the extent that certain racial stocks are n readily assimilated than others, the problems are mitigated. It is equally true that different educational, moral, economic, religious and political backgrounds of a peopl mixed origins lend variety and diversity to the national life.

The two basic stocks of the Canadian people are the French and the English; torically the French is much the older and, excepting at the time of the 1921 Census, always exceeded in numbers any one of the basic British stocks.

For purposes of the census, a person's origin or cultural group is traced through father. For example if a person's father is German and his mother Norwegian the ori is entered as "German". Wherever possible the origin of a person is established by ask the language spoken by the person or by his paternal ancestor when he first came Canada.

Census of 1951 data are the latest available on origins of the population.

13.—Origins of the Population, Census Years 1931, 1941 and 1951

NOTE.—Figures for census years 1871-1921 are given in the 1948-49 Year Book, p. 154.

Countries of Birth.—The decennial census collects information on the country of birth of immigrant arrivals in Canada and province of birth of Canadian born. For persons born outside of Canada the country of birth as constituted at the date of the census is recorded. Table **14** gives the total population by countries of birth for the census years 1931, 1941 and 1951.

14.—Countries of Birth of the Population, Census Years 1931, 1941 and 1951

NOTE.—Figures for census years 1871-1921 are given in the 1948-49 Year Book, p. 158.

[1] Includes the 26 counties of Ireland in 1931 and 1941. [2] Includes Lithuania and Ukraine. [3] Includes Denmark, Iceland, Norway and Sweden. [4] Includes Austria, Czechoslovakia, Hungary, Yugoslavia, Poland and Romania. [5] Includes "birthplace not stated".

Subsection 7.—Religious Denominations

At each decennial census the numbers of persons attached to any religious denom tion, as reported by the persons enumerated, have been recorded. The distribution o principal denominations for the census years 1931, 1941 and 1951 is given in Table No later data are available.

15.—Principal Religious Denominations of the Population, Census Years 1931, 1941 and

NOTE.—More detailed figures for census years 1871-1921 are given in the 1948-49 Year Book, p. 155.

Religious Denomination	1931	1941	1951		Religious Denomination	1931	1941	1951

[1] Includes "Hutterite". [2] Includes "Other Greek Catholic".

Subsection 8.—Languages and Mother Tongues

Tables showing the numbers of persons speaking one, both or neither of the offi languages of Canada and showing mother tongues of the population at the date of 1951 Census are given in the 1957-58 Year Book at pp. 138-139. Further details may found in Vol. I of the 1951 Census of Canada.

Subsection 9.—Households, Families and Dwellings

Households and Families.—Principal statistics on households and families recor at the Censuses of 1951 and 1956 are given in the 1960 Year Book at pp. 192-194; additio summary figures are given in the 1957-58 Year Book at pp. 141-143 and detailed infor tion may be found in 1956 Census Bulletins 1-13 to 1-20 inclusive (Catalogue Nos. 93- to 93-508). For estimates of family characteristics as at June 1959, see p. 169.

Dwellings.—A census of housing was not taken in 1956, so that the latest cen information on this subject is for the year 1951. Summary figures for 1941 and 1951 given in the 1960 Year Book at pp. 194-195. Sample-survey figures on household c veniences are given at p. 169 of this volume.

Subsection 10.—Blind and Deaf Population

A table showing the number of totally blind and totally deaf persons in Canada the time of the 1951 Census is given in the 1957-58 Year Book at p. 145. Further det on the blind and deaf population may be found in Vol. II of the 1951 Census of Cana No later official information will be available until the 1961 Census.

Section 2.—Intercensal Surveys

Subsection 1.—Population Estimates and Movement

Intercensal estimates of the population have many uses. They are necessary to calculation of costs of certain economic and social legislation. Business, educational a welfare organizations utilize population estimates in planning future development. Th constitute a base for vital statistics rates, per capita figures of production and trade, a other analyses. They have proved useful for estimates of labour force and other populat characteristics of data collected in sample surveys.

Estimates are constructed for the total population of Canada and for each province and become available about the date to which they apply—June 1 of each year. Population estimates by province are also available on a quarterly basis. The estimates of population begin with the preceding census counts, to which are added the births of the intervening census year or years and from which the deaths are subtracted; immigrants are added and emigrants subtracted. No precise information is available on emigration. The DBS receives yearly from the United States the number of persons who gave Canada as country of last permanent residence before entering the United States as immigrants (see Chapter on Immigration and Citizenship, Part I, Section 3) and from the United Kingdom's Board of Trade the number of emigrants from Canada taking up permanent residence in the United Kingdom. Such data, however, are not available from other countries, though the proportion of total emigrants to all other countries is small. Family allowance statistics showing the number of migrant families by provinces are used in estimating interprovincial shifts in population.

The following statement shows the data used in preparing the annual estimates for 1957-60. The next succeeding census serves as a basis for revision of the annual estimates.

Item	*Period*			
	1956-57	*1956-58*	*1956-59*	*1956-60*
	No.	No.	No.	No.
Population, Census 1956	16,081,000	16,081,000	16,081,000	16,081,000
Births[1]	451,000	932,000	1,408,000	1,881,000
Deaths[1]	132,000	270,000	408,000	547,000
Immigration	257,000	449,000	564,000	670,000
Emigration (estimated)	68,000	144,000	203,000	271,000
Population at end of period	16,589,000	17,048,000	17,442,000	17,814,000

---

[1] Final figures used where available and registrations substituted for remaining period.

16.—Estimates of Population, by Province, as at June 1, Intercensal Years 1941-60

NOTE.—At every census the previous post-censal estimates, made at June 1 each year, are adjusted to the newly recorded population figures. Figures for all provinces for 1941, 1951 and 1956 and for the Prairie Provinces for 1946 are census figures. Figures for 1867–1904 will be found in the 1936 Year Book, p. 141; for 1905–30 in the 1946 edition, p. 127; and for 1931–40 in the 1952–53 edition, p. 143.

Table 17 shows the natural increase and the total population increase according to the census for Canada and the provinces in the periods 1931-41, 1941-51 and 1951-56. The difference between the natural increase and the total increase in population during a period represents the difference between inward and outward movements, i.e., net migration. The net migration data shown for provinces indicate the net movement of population arising partly from interchange of population between provinces and partly from persons entering and leaving the country.

The earlier movement of population on the North American Continent from east to west has not been apparent since the 1920's. Although British Columbia has continued to show population gains from migration since 1931, much of this gain has been at the expense of the Prairie Provinces. While the three Prairie Provinces lost by migration about 248,000 persons between 1931 and 1941 and somewhat more from 1941 to 1951, they gained in the period 1951-56. Manitoba lost over 109,000 population between 1931 and 1951 but only 152 persons between 1951 and 1956. Saskatchewan has been a consistent loser since 1931, losing on the average over 15,000 a year during the 1930's, almost 20,000 a year during the 1940's and just under 8,000 a year during the 1950's. Alberta lost over 40,000 persons in the decade 1931-41 but only about 7,000 in the next decade and gained close to 65,000 in the five years 1951-56. British Columbia gained through migration at the rate of about 8,000 persons a year during the 1930's, about 23,000 a year during the 1940's and about 27,000 a year in the first half of the 1950's. On an absolute basis, Ontario received more people through migration than did British Columbia but, in relation to its larger population, the gain was only about one-third as important. Most of Ontario's growth through migration was from immigration rather than interprovincial movement of population. Quebec had a slight loss between 1931 and 1951 and a considerable gain in the next five years. Nova Scotia gained population through migration during the 1930's but has been losing ever since; the Maritimes as a whole lost 138,000 persons over the quarter-century.

17.—Numerical Changes in the Population of the Provinces through Natural Increase and Migration 1931-41, 1941-51 and 1951-56

[1] Includes the Yukon and Northwest Territories.

Subsection 2.—Age and Sex Estimates

Table 18 gives estimates of the population of Canada and the provinces by age group and sex as of June 1, 1960. The method followed in preparing these estimates was much the same as that used in calculating the population estimates, described on p. 165. These estimates are subject to revision following the 1961 Census.

18.—Estimated Population classified by Age Group and Sex, by Province, as at June 1, 1960

Province or Territory	0-4 Years		5-9 Years		10-14 Years		15-19 Years

Subsection 3.—Marital Status Estimates

The estimated total population of Canada, exclusive of the Yukon and Northwest Territories, on June 1, 1959 was 17,408,000, of whom 11,600,000 or 66.6 p.c. were 15 years of age or over. The estimated total of males 15 years of age or over was 5,858,500 of whom 1,795,700 or 30.7 p.c. were single, 3,850,100 or 65.7 p.c. were married and 212,700 or 3.6 p.c. were widowed or divorced. The estimated total of females 15 years of age or over was 5,741,500, of whom 1,331,900 or 23.2 p.c. were single, 3,816,100 or 66.5 p.c. were married and 593,500 or 10.3 p.c. were widowed or divorced.

The trend towards earlier age at marriage during the war and postwar period was reflected in the sharp rise in the proportion married in the age group 15–24 years, where the percentage increased from 8.0 in 1941 to 16.0 in 1959 for males and from 21.5 to 34.2 for females.

Estimates of marital status also reflect the continuing excess of married males over married females, and the large number of widows as compared with widowers in the population, previously noted as a striking feature in the results of the 1956 Census. It is estimated that in 1959 the number of widows exceeded the number of widowers by 381,000.

19.—Estimated Population classified by Marital Status, Age Group and Sex, as at June 1, 1959

Subsection 4.—Dwelling and Family Estimates

Annually since 1953 a sample survey on dwellings and household facilities and equipment has been conducted in conjunction with the monthly labour force survey. More than 35,000 households chosen by random sampling methods in about 160 different areas are interviewed. Results of the 1960 survey are presented in Table **20**.

20.—Dwelling Characteristics, Sample Survey, May 1960

[1] Excludes households in the Yukon and Northwest Territories; households of Indians on reserves; such collective-type households as those living in hotels, large lodging houses, institutions, clubs and camps. [2] For exclusive use of household.

Estimates of the number of families in Canada and the provinces are also prepared annually. The estimates for 1959 were based on family data secured from the May 1959 sample survey of the labour force and population estimates for 1959.

The estimated number of families in Canada in June 1959 was 4,038,000, an increase of 332,000 or 9.0 p.c. since the 1956 Census. The average number of persons per family was 3.9 compared with 3.8 in 1956 and 3.7 in 1951. The number of children in families increased by 930,000 in the years between June 1956 and June 1959 and showed an average annual increase of 243,000 since June 1951. It is interesting to note that since 1951 there has been an increase in the percentage of families having three children or more at home and a decrease in the percentage of families having fewer than three children, or no children.

21.—Estimates of Family Characteristics, June 1959 compared with Censuses of 1951 and 1956

Section 3.—The Native Peoples of Canada

Two small segments of the population are given special attention because they, in point of time and origin, are the most truly Canadian of the country's citizens and because they, of all the people in the land, are the least able to cope with the rapid changes taking place in their way of life.

The Indians.*—Approximately one of every hundred Canadians is registered as an Indian by the Department of Citizenship and Immigration. This number includes all persons with a paternal ancestor of Indian race who have chosen to remain under Indian legislation. In the aggregate, the Indians are grouped into 562 bands and occupy or have access to 2,217 reserves having a total area of 5,899,892 acres.

About 26 p.c. of the Indians reside away from reserves, including those in the Northwest Territories and the Yukon for whom reserves have not been set aside. Many Indians, both on and off reserves, have specialized in the various professions, trades and agricultural pursuits. Others have fitted into the economy of the areas in which they live in a wide variety of occupations. More than 230 Indians are employed by the Indian Affairs Branch of the Department of Citizenship and Immigration, 116 of whom are teachers. In the northern and other outlying areas, hunting, fishing and trapping remain an important means of livelihood for Indians.

Subject to special provisions in the Indian Act, all laws of general application are applicable to Indians. Indians are liable for taxation of property held off a reserve as well as any income they earn off a reserve. They may vote in federal elections on the same basis as other citizens and in provincial elections where the electoral laws of the provinces permit. Indians are free to enter into contractual obligations and may sue and be sued. However, their real and personal property situated on a reserve is exempt from seizure except on suit by another Indian.

22.—Indian Land in Reserves and Number of Bands, by Province, as at Mar. 31, 1960

---

* Prepared in the Information Division, Department of Citizenship and Immigration, Ottawa.

The 1959 Indian population in each province is classified by age group and sex in Table 24. The rapid growth of that population in recent years is indicated by the fact that in 1959 more than 56 p.c. of the Indians were under 21 years of age compared with 42 p.c. of the population of Canada as a whole. Religious denominations of the Indian population are given in Table **25**.

Administration.—Pursuant to the British North America Act, the administration of Indian Affairs, which had been under the management of several provinces, came under the jurisdiction of the Government of Canada. Since January 1950, Indian Affairs have been the responsibility of a Branch of the Department of Citizenship and Immigration.

The Indian Affairs Branch is composed of a headquarters staff at Ottawa, nine regional offices, and 89 field agencies. Specialists in such matters as education, economic development, resource management, social welfare, and engineering and construction are attached to headquarters and regional staffs. Liaison is maintained with the Indian and Northern Health Services of the Department of National Health and Welfare, the federal agency concerned with the medical care of Indians.

It is the primary function of the Indian Affairs Branch to administer the affairs of Indians in a manner that will enable them to participate fully in the social and economic life of the country. To this end, the Branch has brought into effect a wide range of programs in the fields of education, economic development, social welfare and community development. Underlying administrative duties of the Branch include the management of Indian reserves and surrendered lands, the administration of band funds, estates management, enfranchisement of Indians, and the administration of treaty obligations.

Education.—More than 40,000 Indian students are enrolled in schools throughout the country. Nearly one-quarter of these attend provincial and private schools, the cost of tuition being assumed by the Federal Government. As a further encouragement to the integration of Indian children in non-Indian schools, grants are made toward the cost of any new or supplementary construction required by their admission.

There are four types of Indian schools, all operated at the cost of the Government. On most reserves, day schools have been established to provide education for children who live at home. Residential schools are operated to care for orphaned children, children from broken homes, and for those who, because of isolation or other reasons, are unable to attend day schools. Seasonal schools have been established for the children of migratory families, particularly in the Far North. The fourth type of school is designed to meet the needs of children confined to hospital.

All standard classroom supplies and authorized textbooks are provided in Indian schools. Financial assistance for students attending non-Indian schools varies from payment of tuition fees for some, to full maintenance for others. Promising senior students are awarded scholarships to attend university or vocational school and scholarships are given to those who show promise in the arts.

26.—Enrolment of Indian Pupils, classified by Type of School and by Grade, Academic Year 1959-60

Economic Development.—With a view to providing for all Indians the opportunity to earn satisfactory incomes, the Indian Affairs Branch has instituted a number of programs in the field of economic development. These programs give special attention to the placement of Indians in employment; the promotion of agriculture and stock-raising on reserves; the fostering of Indian enterprise and the provision of loans; home industries and handicrafts; the management of fur, fish and wildlife resources; and assistance to Indians in developing other resources on or within access of the reserves.

The Employment Placement Program has as its objective the development of job opportunities for Indians and the promotion of their employment in a wider range of occupations. Indian Affairs Branch Placement Officers are attached to Branch Regional Offices at Vancouver, Edmonton, Saskatoon, Winnipeg, North Bay, Toronto, Quebec, Amherst, Fort Smith and Whitehorse. In addition, the facilities of the National Employment Service are utilized to the greatest possible extent in placing Indians in both urban and rural employment.

The rehabilitation and management of fur resources, undertaken in co-operation with various provinces, is being continued. Under the program, beaver production in Saskatchewan, Manitoba, Ontario and Quebec has risen steadily; during the 1959-60 season, 247,196 beaver pelts valued at $2,674,483 were taken. Total Indian income from trapping in that season was approximately $5,500,000.

Commercial fishing by inland Indians is growing in economic importance. In 1959, the lake catch was valued at nearly $1,000,000. Coastal fisheries brought in approximately $5,000,000 and a further $1,000,000 was earned by Indians in the packing, canning and processing of fish products.

A special $1,000,000 revolving fund has been set aside by the Government as a source of credit for Indians who live on reserves. During the year ended Mar. 31, 1960, 100 loans totalling $109,230 were approved. Most of these loans were for agricultural purposes, including the purchase of machinery and cattle.

Welfare.—A public assistance program is provided by the Indian Affairs Branch for Indians who are unable, for various reasons, to maintain themselves and their families. In the field of rehabilitation, handicapped Indians are helped, through training and selected placement, to the fullest utilization of their abilities. Care of neglected children rests for the most part with the Branch but, increasingly, the co-operation and assistance of provincial accredited child-caring agencies are being employed. Housing is another important item of Indian welfare services—over 10,000 houses were built and thousands of others repaired during the past decade. In recent years, Indian householders have been meeting approximately one-half the cost of new construction and renovation.

28.—Housing on Indian Reserves, by Region, Year Ended Mar. 31, 1960

Every effort is made to reach agreement with provincial governments which will make possible the application of normal provincial welfare services and benefits on reserves. Several bands in Ontario already participate in the Ontario General Welfare Assistance Act. Throughout Canada, Indians are paid family allowances, old age security, old age assistance, blind persons' allowances and disabled persons' allowances, and in the Provinces of Ontario and Quebec, mothers' allowances are available to needy Indian mothers.

Community Development.—Community development on Indian reserves is making progress at an ever-increasing rate. Leadership training courses are conducted under Indian Affairs Branch auspices to help Indians identify and understand community problems and to become familiar with accepted methods of community organization. Indian women are encouraged to form homemakers' clubs patterned after municipal women's institutes and the Branch assists the clubs through counselling and material aid. The Branch also encourages Indian band councils to exercise to the fullest extent their powers and duties granted under the Indian Act.

Through the co-operation and assistance of university extension departments, provincial education authorities and various health and welfare organizations, the Branch-sponsored programs for community development have been greatly expanded in recent years. The Extension Department of the St. Francis Xavier University has directed an intensive program in community action by Indians on the Sydney and other reserves in Nova Scotia. Leadership training courses for Indians have been held annually under the auspices of the Welfare Council of Greater Winnipeg. Universities are assisting in planning and developing programs for Indian groups in Alberta, British Columbia and Quebec. In Ontario, the Community Programs Branch of the Provincial Department of Education has planned and organized a special leadership training course for Indian band chiefs and councillors.

The Eskimos.*—For most of Canada's 11,500 Eskimos, each year brings ever-increasing changes in the familiar pattern of the traditional way of life. Scattered throughout the northern mainland and the Arctic Islands, they are facing the impact of southern culture and southern economic activity and have begun to emerge as leaders in totally new fields. Many have joined the ranks of the growing body of skilled Eskimo tradesmen—in the nickel mine at Rankin Inlet, where more than 50 are employed; on the Distant Early Warning Line, where a hundred or so play a part in the defence of North America; and in the service of mining and oil exploration companies probing the exciting possibilities of the North. In 1960, the first Eskimo was ordained a Minister in the Anglican Church; another became a senior officer in a large centre for the rehabilitation of disabled Eskimos; and another became an announcer in the new CBC Northern Service. In dozens of communities, Eskimos are serving as diesel mechanics, interpreters, clerks, hospital aides, electricians, carpenters and power plant operators. At the same time, about three-quarters of the Eskimo population live outside the main centres of economic and government activity and continue to live as their fathers lived—by hunting, trapping and fishing.

Whatever the activities, they are not without problems for the Eskimo people. Those in wage employment face the difficulties of social adjustment in a new and different way of life. Those on the land face the fundamental problems of obtaining adequate food and shelter. The Government of Canada, through the Department of Northern Affairs and National Resources and other agencies, is endeavouring to ensure that the citizens of the North receive not only the same social benefits as southern Canadians in the form of family allowances, old age assistance, and disabled persons' allowances, but also such additional help as may be required to enable them to maintain a leading role in the years of adjustment. Teachers, northern service officers, social workers, technical officers and a variety of other government agents engaged in the administration of the northland pool their knowledge and their skills to this end. Schools have been established in most Arctic communities and hostels have been built to accommodate children whose parents live away from the communities, so that in 1961 some 1,800 Eskimo children—approximately half the total of school age—were in regular attendance. Vocational training and adult education courses are provided to enable wage-employed Eskimos to learn the skills necessary in their new jobs.

Welfare services include the operation of three centres for the rehabilitation of Eskimos disabled by tuberculosis, by other diseases or by accident, where those unable to return to the old way of life may learn new kinds of work and become self-sufficient. Welfare officers employed throughout the Arctic are few in number but they render a wide variety of case-work services to the Eskimo population.

Permanent housing of a kind within the reach of all to buy and heat is a necessity for both the wage-employed Eskimo and the Eskimo still living on the land. More than 200 units of a small dwelling designed in 1958 have been shipped to a number of Arctic communities. Many of them have been erected by the purchasers themselves. Some of those in wage employment have already completed their payments, while many of the buyers living on the land will take advantage of the full ten-year amortization plan.

For the people living on the land, education for their children offers the brightest hope for the future, but new uses for existing resources are contributing to a more comfortable life today. Co-operative fisheries and handicraft production shops are bringing much-needed cash to the small communities. Carvings and stone-cut prints have reached a high standard of excellence and have brought Canadian Eskimos world-wide acclaim in the artistic field as well as a valuable economic return. Where country food is plentiful, community freezers are now used to store game and fish taken during the summer months for the winters ahead. With the better use of local food and with a higher income for many people, the threats of privation and malnutrition are dwindling.

---

* Prepared in the Information Section, Department of Northern Affairs and National Resources, Ottawa. A more detailed article appears in the 1960 Year Book, pp. 205–210.

The Eskimo people have survived for thousands of years on comparatively meagre resources in a harsh land and have become a hardy, adaptable and surprisingly cheerful group. They are taking the southern invasion in their stride and using their adaptability to show that they can take their place in the new North alongside the best professional workers, technologists and tradesmen that southern Canada can produce. Of all the wealth the North may yield, none will be more important to the future of Canada than its first residents, the Eskimos.

Section 4.—Statistics of World Population

World population figures given in Table 29 are from the United Nations *Population and Vital Statistics Report* for October 1960 and, except as otherwise noted, are mid-year estimates for 1959. The area figures are from the United Nations *Statistical Yearbook, 1959*.

Estimated Population of the World by Continents.—The statement below presents adjusted estimates of the 1959 mid-year population of the world by continental divisions. These aggregates do not coincide exactly with the sum of the figures for individual countries because they include, in addition, adjustments for over- and under-enumeration, over-estimation, categories of population not regularly included in the official figures, and approximations for those countries that have not provided official 1959 data. The estimates are as follows:—

Continental Division	*Number*
Africa	236,000,000
North America	261,000,000
South America	137,000,000
Asia (includes Syria and Asiatic Turkey)	1,622,000,000
Europe (includes European Turkey)	423,000,000
Oceania (includes Hawaii)	16,100,000
Union of Soviet Socialist Republics (Asia and Europe)	210,500,000
WORLD TOTAL	2,905,600,000
Commonwealth countries (at June 1, 1961)	680,657,000 (1959)

29.—Areas and Populations of the Countries or Areas of the World, 1959

NOTE.—Status of independency or dependency is as at June 1, 1961. Members of the Commonwealth and the Territories for which the United Kingdom or Commonwealth members are responsible (at June 1, 1961) are indicated with an asterisk (*).

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

PART I.—IMMIGRATION AND EMIGRATION*

The history of immigration and the Immigration Act and Regulations is dealt with in detail in a special article entitled "Developments in Canadian Immigration" appearing in the 1957-58 Year Book at pp. 154-176. Supplementing that material is an article on the "Integration of Postwar Immigrants" at pp. 176-178 of the 1959 edition.

Section 1.—Immigration Policy and Administration

Since the end of the Second World War it has been the policy of the Government of Canada to stimulate the growth of the population by selective immigration. Efforts are made to choose immigrants of prospective adaptability to the Canadian way of life and to admit them at such times and in such numbers as employment conditions warrant.

Federal immigration policy is governed by the provisions of the Immigration Act and Regulations, which permit the admission to Canada of British subjects by birth or naturalization in the United Kingdom, Australia, New Zealand or South Africa; citizens of Ireland and of the United States; and French citizens born or naturalized in France or on the islands of St. Pierre and Miquelon. All, however, must be in good health, be of good character, and have sufficient means to maintain themselves until they have secured employment. Other classes of admissible immigrants consist of persons considered to be desirable in the light of social and economic conditions prevailing in Canada at the time, and possessed of qualifications for successful integration. Also admissible are certain categories of close relatives of citizens or legal permanent residents of Canada where the sponsor, in Canada, is in a position to receive and care for the prospective immigrants who must satisfy the requirements of the Immigration Act and Regulations. Agreements are in effect with the governments of India, Pakistan and Ceylon for the admission annually of 300, 100 and 50 persons, respectively, from those countries in addition to certain close relatives.

The Immigration Branch of the Department of Citizenship and Immigration administers the Immigration Act and Regulations. Twenty-seven visa officers are located abroad at London, Liverpool, Leeds, Bristol, Glasgow, Belfast, Dublin, Paris, Brussels, Berne, The Hague, Copenhagen, Cologne, Berlin, Hamburg, Munich, Stuttgart, Vienna, Oslo, Stockholm, Helsinki, Lisbon, Rome, Athens, Tel Aviv, New Delhi and Hong Kong. Four offices in the United States—at New York, Chicago, San Francisco and Denver—

---

* Sections 1 and 2 of this Part were revised under the direction of the Deputy Minister, Department of Citizenship and Immigration, Ottawa.

furnish information and counselling but do not issue visas. Personnel at all posts are kept in close touch with economic conditions in Canada and thus are able to advise immigrants regarding prospects for successful settlement. Examination of immigrants and visitors is carried out at 349 ports of entry on the Canadian coasts, at points along the International Boundary, and at certain airports.

A primary objective of administration is satisfactory settlement. The Federal Government assists immigrants in establishing themselves in the Canadian community through the work of the Immigration Branch Settlement Service, the Canadian Citizenship and Canadian Citizenship Registration Branches and other government agencies, and co-operates closely with several voluntary agencies having the same objective.

Section 2.—Immigration Statistics

Postwar Immigration.—The extent of immigration to Canada in any period is affected both by domestic conditions and by conditions abroad. However, these influences are seldom immediately decisive. News of good economic conditions in Canada predisposes people in favour of this country but, because the immigration process usually takes from six to eighteen months, actual immigration is not always fully coincidental with the economic situation, so that immigration may at times be slight in good years but appear unduly heavy in less buoyant periods. The time-lag caused by selection, medical examination and documentation is unavoidable. Transportation is often another delaying factor and to these considerations must be added the effect of seasonal unemployment in Canada, which tends to discourage immigration during the months from November to April.

Since the end of World War II there have been wide annual fluctuations in immigration to Canada caused mainly by economic and political factors. Many of the persons who arrived in 1946 and 1947 were the wives and children of Canadian service men and their numbers were dictated by the availability of shipping. In 1948, as more shipping became available, the number of immigrants doubled. In addition to the large movement from the United Kingdom, thousands of displaced persons were admitted and Germans and Italians began to come forward in appreciable numbers after having been removed from the enemy alien category. As the high level of immediate postwar economic activity levelled off, there was a drop of 30,000 in the number of immigrants entering in 1949 compared with 1948, and a further drop of 20,000 in 1950. Then the outbreak of war in Korea created a new stimulus to industry and caused shortages of labour; at the same time fear of war in Europe made Canada seem a desirable haven. Thus in 1951 immigration increased nearly threefold and remained in excess of 150,000 for the following three years. Very significant numbers of Germans and Italians were admitted and the gap between them and the British Isles group was narrowed. Another minor economic setback in 1954 caused immigration to fall in 1955 by some 45,000 but, with the return of better times in North America and the deterioration of the political situation in Europe, immigration again rose by 55,000 in 1956. The Hungarian revolution and the Suez crisis of 1956 had a sharp impact on Canadian immigration in 1957 when 282,164 persons were admitted, including 31,643 from Hungary and 108,989 from the United Kingdom. This was the largest number of immigrants to enter Canada since 1913. The conclusion of the Suez affair and the suppression of the Hungarian revolt restored some measure of calm in Europe. Canada's economy suffered a recession in 1956 and 1957 while Europe's economic position improved, as a result of which only 124,851 immigrants came to Canada in 1958. The United Kingdom's recovery from the war and its aftermath was reflected in the fact that for the first time in the postwar years the British Isles group of arrivals was not the largest—persons from Italy were in first place, numbering 27,043 compared with 24,777 from the United Kingdom. This situation continued during 1958 and 1959. The total arrivals in these years dropped to 106,928 and 104,111, respectively, and in both years the number from Italy remained in first place above the number from the United Kingdom.

Immigration from the United Kingdom during the period 1946-60, inclusive, was 582,472 representing 29.0 p.c. of the total immigration to Canada in that period. Other large groups came from Italy, numbering 259,810 and representing 13.0 p.c. of the total; Germany, 234,774 representing 11.7 p.c.; Netherlands, 147,400 representing 7.4 p.c.; United States, 145,125 representing 7.2 p.c.; and Poland, 89,835 representing 4.5 p.c.

In each postwar year, up to and including 1957, the British Isles group was the largest, ranging from a low of 12,669 in 1950 to a high of 108,989 in 1957. Immigrants from the United States formed the second largest group in 1946 and 1947, and from Poland in 1948, 1949 and 1950. Persons from Germany filled this position from 1951 to 1954, in which years persons from Italy and the Netherlands also arrived in substantial numbers. In 1955 and 1956 persons from Italy were in second place but Hungarians took that position in 1957. Immigrants from Italy headed all groups in 1958, 1959 and 1960 with persons from the United Kingdom in second place. During the whole postwar period, immigration from the United States has remained relatively constant, ranging from a high of 11,474 in 1946 to a low of 7,393 in 1948; the annual average for the period was 9,665.

Total immigration to Canada for the years 1946-60, inclusive, was 2,005,230. The yearly totals for this period are shown in Table 1, together with annual figures back to 1913, the peak year of immigration into Canada.

1.—Immigrant Arrivals, 1913-60

Note.—Figures for 1852-93 are given in the 1942 Year Book, p. 153, and for 1894-1912 in the 1948-49 edition, p. 175.

Year	Arrivals	Year	Arrivals	Year	Arrivals	Year	Arrivals	Year	Arrivals
	No.		No.		No.		No.		No.

1921	91,728	1931	27,530	1941	9,329	1951	194,391	1960	104,111
1922	64,224	1932	20,591	1942	7,576				

Admissions by country of last permanent residence are given in Table 2 for the years 1956-60 only. During that five-year period, 29.7 p.c. of the immigration flow came from the United Kingdom and Ireland, 55.9 p.c. from Continental Europe, 6.9 p.c. from the United States and 7.5 p.c. from all other countries.

2.—Immigrant Admissions by Country of Last Permanent Residence, 1956-60

Note.—Comparable figures for 1946-49 are given in the 1951 Year Book, p. 143, for 1950-52 in the 1956 edition, p. 182 and for 1953-55 in the 1959 edition, p. 179; figures in less detail for 1939-45 appear in the 1950 edition, p. 186.

Other analyses of the content of the immigration movement in recent years are given in Tables **3** to **9**. The numbers of persons deported from Canada for various reasons in the years 1951-60 are shown in Table **10**.

Sex, Age and Marital Status.—In the ten-year period 1951-60 adult males comprised 40.6 p.c. of the immigrant arrivals, adult females 33.9 p.c. and children under 18 years of age the remaining 25.5 p.c. Without relation to age, 54.0 p.c. of the newcomers were males.

3.—Sex Distribution of Immigrants as Adult Males, Adult Females and Children, 1951-60

NOTE.—Figures from 1930 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

Year	Adult Males	Adult Females	Under 18 Years		Total
			Males	Females	
	No.	No.	No.	No.	No.
1951	95,818	53,239	24,348	20,986	194,391
1952	66,083	53,443	23,766	21,206	164,498
1953	68,269	56,425	23,153	21,021	168,868
1954	64,551	51,690	19,980	18,006	154,227
1955	42,425	40,120	14,403	12,998	109,946
1956	67,880	55,574	21,661	19,742	164,857
1957	115,765	92,202	38,461	35,736	282,164
1958	44,008	48,655	16,622	15,566	124,851
1959	37,110	41,891	14,366	13,561	106,928
1960	37,653	40,241	13,365	12,852	104,111

In 1960, 77.2 p.c. of the males and 79.1 p.c. of the females arriving were 15 years of age or over as compared with 75.7 p.c. and 78.9 p.c., respectively, in 1959. Of those arriving in 1960 who were 15 years of age or over, 50.4 p.c. were married, 43.6 p.c. were single and 5.5 p.c. were widowed or divorced. The total number of single males exceeded the number of single females by 4,786 but there were more females than males in the widowed and divorced categories. In the single class, males were 17.9 p.c. more numerous than females, the numerical superiority being particularly heavy in the age group 15-29 years.

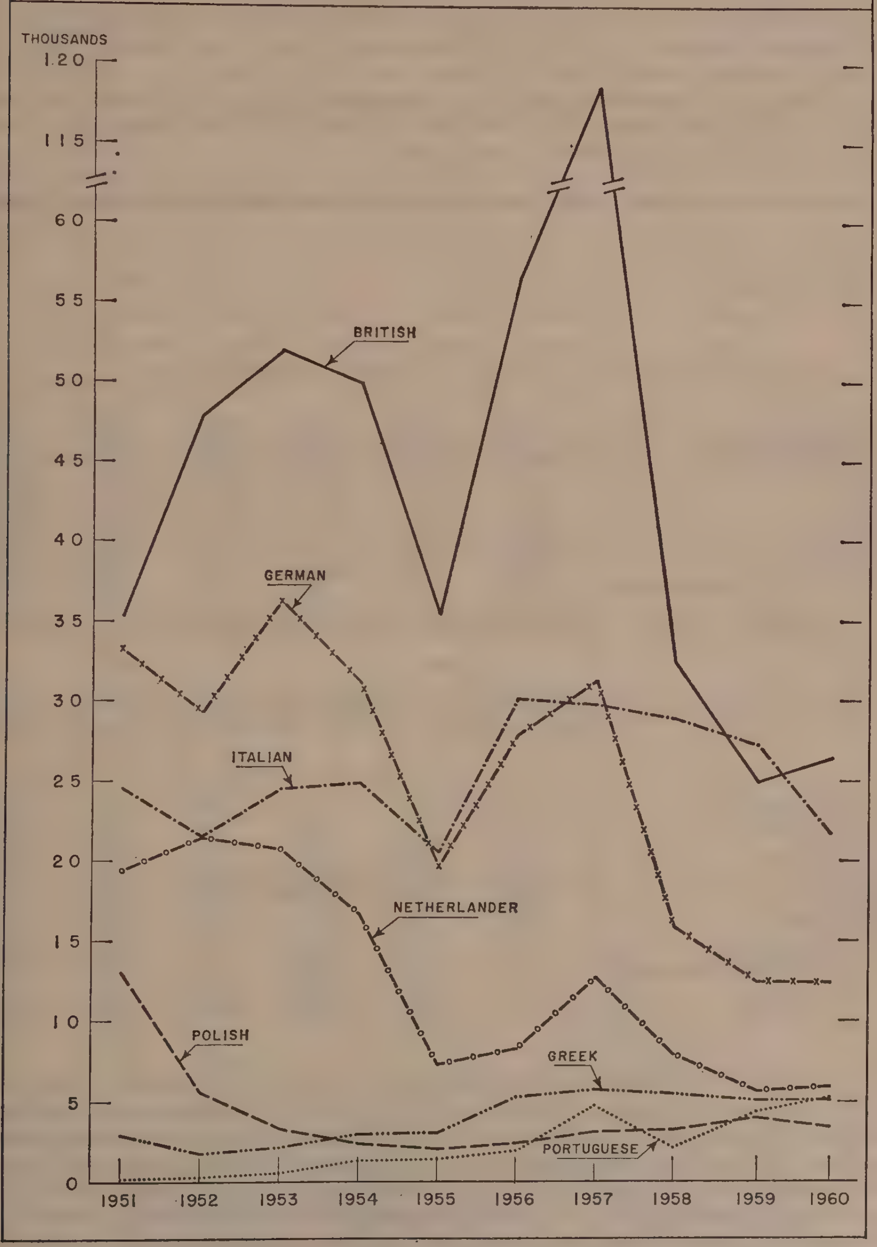
[2] Reported as Swiss origin but evidently one of the constituent races such as German, French, Italian, etc.

ORIGINS OF IMMIGRANT ARRIVALS, 1951-'60

(LARGEST NUMERICAL GROUPS IN 1960)



Destinations and Occupations.—Upon arrival in Canada, immigrants are asked to state their intended destination. According to these records, Ontario absorbed by far the highest proportion of arrivals in the four-year period 1957-60—50.8 p.c. of all the males and 53.3 p.c. of all the females. Quebec was the second most important province of destination, receiving 21.7 p.c. of the males and 21.0 p.c. of the females. The proportions intending to settle in British Columbia were 11.8 p.c. and 11.5 p.c., respectively; in the Prairie Provinces 13.5 p.c. and 12.0 p.c., respectively; and in the Atlantic Provinces 2.0 p.c. and 2.1 p.c., respectively. The provincial distribution has changed little from year to year throughout the whole postwar period.

In like manner, immigrant arrivals are asked to record the occupations which they intend to follow in Canada. Approximately 51.5 p.c. of the persons admitted in 1960 declared that they would enter the labour force. The other 48.5 p.c. were wives, children and other dependants or were retired persons. Of the male workers, 14.4 p.c. were classed as professional and managerial, 14.1 p.c. were in agricultural occupations, 4.5 p.c. in service occupations, 33.2 p.c. in manufacturing, mechanical and construction trades, and 19.8 p.c. were general labourers. About 43 p.c. of the female immigrants entering the labour force were intending to follow service occupations. Details are given in Table 9.

Deportations.—Deportations by cause and nationality are shown in Table 10 for the years 1951-60. Persons who have not yet acquired domicile (five years residence in Canada) may be deported if they fall into prohibited classes at time of entry or within five years of entry, if they have engaged in commercialized vice, have been convicted under the Criminal Code or have become inmates of prisons or mental institutions, or have gained entry by fraudulent means. The causes that may lead to deportation are narrowed after a person has acquired domicile. A person not a citizen may be deported regardless of length of residence if he is found to be a member of a subversive organization or engages in subversive activities, or if he has been convicted of an offence involving disloyalty to the Queen, or if he has, outside of Canada, engaged in activities detrimental to the security of Canada. A Canadian citizen cannot be deported.

10.—Deportations,[1] by Cause and Nationality, 1951-60

Note.—Figures from 1903 are given in the corresponding table of previous Year Books.

Returning Canadians.—The numbers of Canadians returning to Canada during each of the ten years 1951-60 after having resided in the United States were:—

Year	*No.*	*Year*	*No.*
1951	3,635	1956	4,740
1952	4,707	1957	5,426
1953	4,606	1958	5,297
1954	4,516	1959	5,243
1955	3,942	1960	5,233

Section 3.—Emigration Statistics

Emigration from Canada is an important factor tending to offset to some exten present and past immigration activities. The major outward movement has always, c course, been to the United States and that movement, both of native-born Canadiar and of Europeans who originally migrated to Canada, has attained considerable propo tions at certain periods. No Canadian statistics on emigration are available but Table 1 gives figures taken from the annual reports of the Immigration and Naturalization Servic of the United States Department of Justice. These figures show the numbers of person entering the United States from Canada during the years 1950-59 with the expresse intention of establishing permanent residence in that country. They do not incluc persons travelling for pleasure, even for extended periods of time, holders of borde crossing cards (normally issued to persons living in border areas of Canada but workir in the United States) or casual tourist crossings in these same areas.

Of the 34,599 persons entering the United States from Canada in the year ende June 30, 1959, 23,082 were native-born Canadians—10,250 males and 12,832 female Only about one-quarter, or 5,919, of the total native-born emigrants were males in tl productive age group 20-59 years. By occupation, the largest group of the total of 23,0 native-born persons was the professional or technical group which numbered 3,157; clerical or kindred workers numbered 2,469, and 1,222 were classed as craftsmen or foremen. On the other hand, 12,309 persons or slightly more than 53 p.c. of the total were classed as housewives, children and others with no occupation. Altogether, 36.7 p.c. of the total were children under 20 years of age.

11.—Persons Entering the United States from Canada, Years Ended June 30, 1950-59

NOTE.—Includes only persons who have declared their intention of remaining permanently in the United States when applying for a visa (see text above). SOURCE: Immigration and Naturalization Service, United States Department of Justice.

PART II.—CANADIAN CITIZENSHIP*

Naturalization procedures and events leading to the passing of the Canadian Citizenship Act are given in the 1951 Year Book, pp. 153-155.

Section 1.—The Canadian Citizenship Act

The Canadian Citizenship Act came into force on Jan. 1, 1947, its purpose being to give a clear definition of Canadian citizenship and provide an underlying community of status for all the people of Canada. Since Jan. 18, 1950, the administration of Canadian citizenship has been the responsibility of the Department of Citizenship and Immigration. The provisions of the Act and its several amendments are outlined in some detail in the 1955 Year Book, pp. 177-181. More briefly, they are given in the following paragraphs.

Natural-Born Canadian Citizens, Born before Jan. 1, 1947.—The Act conferred natural-born status upon two categories of persons in being on Jan. 1, 1947. These were (1) those born in Canada or on a Canadian ship or aircraft and who were not aliens on Jan. 1, 1947; and (2) those born outside of Canada who were not aliens on Jan. 1, 1947 and who were entitled to claim derivative citizenship in accordance with the provisions of the Act.

The Act provides that a person in the second category who was a minor on Jan. 1, 1947 will automatically cease to be a Canadian citizen on his 24th birthday or on Jan. 1, 1954, whichever is the later date, unless he has his place of domicile in Canada at such date or has, before such date and after reaching the age of 21 years, filed a declaration of retention of Canadian citizenship.

Natural-Born Canadian Citizens, Born after Dec. 31, 1946.—A person born outside of Canada subsequent to that date, whose responsible parent is considered a Canadian citizen pursuant to the terms of the Canadian Citizenship Act, is a Canadian if his birth is registered with the Registrar of Canadian Citizenship within two years of its occurrence or within such extended period as the Minister may authorize in special cases.

A person who becomes a natural-born Canadian citizen in such a manner will automatically cease to be a Canadian citizen if he fails to file a declaration of retention prior to his 24th birthday and does not have his place of domicile in Canada upon that date.

---

* Prepared in the Citizenship Registration Branch under the direction of the Deputy Minister, Department of Citizenship and Immigration, Ottawa.

Canadian Citizens other than Natural-Born.—Before the 1953 amendments to the Citizenship Act, the only persons who acquired Canadian citizenship on Jan. 1, 1947 through the transitional clauses of Sect. 9 were persons who were naturalized in Canada before that date, British subjects who had Canadian domicile at the commencement of the Act and women lawfully admitted to Canada and married prior to Jan. 1, 1947 whose husbands would have qualified as Canadian citizens if the Act had come into force before the date of marriage. Sect. 9 was amended on June 1, 1953, so that a British subject who had his place of domicile in Canada for at least 20 years immediately before Jan. 1, 1947 need not comply with the requirements of Canadian domicile provided he was not under an order of deportation on Jan. 1, 1947.

Acquisition of Canadian Citizenship by Aliens and British Subjects.—The Act provides a means of acquiring Canadian citizenship. An alien who wishes to become a Canadian citizen must apply through his local court or through one of the special citizenship courts now being established. He must appear before the judge for a hearing; and will in due course be granted citizenship if his application is approved by the judge and by the Minister. A British subject may apply for citizenship directly to the Minister. It should be added that a minor child does not automatically acquire Canadian citizenship upon the grant of citizenship to the responsible parent.

Status of Married Women.—The Canadian Citizenship Act places no disabilities upon the married woman. She neither acquires nor does she lose Canadian citizenship by marriage. In order to acquire Canadian citizenship she must apply in exactly the same manner as does a man. There is, however, one advantage granted to her—if she is married to a Canadian citizen she may apply for citizenship after a residence of only one year in Canada.

The Canadian Citizenship Act also enables a woman married to an alien whose nationality she acquired upon marriage to divest herself of Canadian citizenship by the filing of a declaration of renunciation. Finally, it provides a means whereby a woman, who had become an alien through marriage prior to Jan. 1, 1947, may acquire the Canadian status she would otherwise have assumed on that date.

Status of Minor Children.—The minor child of a Canadian citizen other than a natural-born Canadian may receive a certificate of Canadian citizenship upon applicatio therefor by his or her responsible parent, *de facto* guardian, or mother if she has custody of the child. Provision is also made in the Citizenship Act for the granting of certificate of citizenship to a minor child in special circumstances. Provision is mad for the granting of a certificate to a person who has been adopted or legitimated in Canad and who has been admitted to Canada for permanent residence, if the adopter or the legally recognized father is a Canadian citizen.

Loss of Canadian Citizenship.—Canadian citizenship may be lost in the followin manner:—

(1) A Canadian citizen who when outside of Canada and not under disability acquires by voluntary and formal act other than marriage the nationality or citizenship of a countr other than Canada. This does not apply if the country is at war with Canada at the tim of acquisition but in such a case the Minister may order that he cease to be a Canadia citizen. The purpose of this is to hold the person, if deemed necessary, to his obligation as a Canadian.

(2) A natural-born Canadian citizen who is a dual national by birth or through naturalizatio and any Canadian citizen on marriage, may after attaining the age of 21 cease to be Canadian citizen through the making of a declaration of renunciation thereof.

(3) A Canadian citizen who under the law of another country is a national or citizen of suc country and who serves in the armed forces of such country when it is at war with Canad This does not apply if the Canadian citizen became a national or citizen of such countr when it was at war with Canada.

(4) An other-than-natural-born Canadian citizen, unless he served outside Canada in th Armed Forces of Canada in time of war or other related circumstances, or unless otherwi exempt, loses his citizenship automatically if he has resided outside of Canada for te consecutive years. The period of absence may however be extended upon request, the application is filed and granted before loss occurs and if good and sufficient reas exists.

Loss of Citizenship by Revocation—Applicable Only to Naturalized Persons.—The citizenship of a Canadian citizen other than a natural-born Canadian citizen may be revoked by the Governor in Council if, upon a report from the Minister, he is satisfied that such Canadian citizen, having been charged with the offence of treason under the Criminal Code or with an offence under the Official Secrets Act, has failed or refused to return to Canada voluntarily within such time as may be prescribed in a notice sent by the Minister to such person at his last known address and has not appeared at the preliminary inquiry into such offence or at the trial of such offence, or both as the case may be; or has obtained a certificate of naturalization or of Canadian citizenship by false representation or fraud or by concealment of material circumstances.

Doubt as to Loss of Citizenship.—Where in the opinion of the Minister a doubt exists as to whether a person has ceased to be a Canadian citizen, the Minister may refer the question to the Commission referred to in Subsection (4) of Section 19 for a ruling and the decision of the Commission or the Court, as the case may be, shall be final.

Loss of Citizenship by Revocation—Applicable to Both Natural-Born and Naturalized Persons.—The Governor in Council may in his discretion order that any person shall cease to be a Canadian citizen if, upon a report from the Minister of Citizenship and Immigration, he is satisfied that such person has, when not under a disability (1) acquired voluntarily the citizenship of a foreign country (other than by marriage), (2) taken or made an oath, affirmation, or other declaration of allegiance to a foreign country, or (3) made a declaration renouncing his Canadian citizenship.

Section 2.—Canadian Citizenship Statistics

Data on countries of allegiance and origins of the population were not collected at the 1956 Census so that the latest information available is that for the 1951 Census. Results of that census show that 96.9 p.c. of the people of Canada were Canadian citizens; that 0.7 p.c. were citizens of other Commonwealth countries; 1.7 p.c. of European countries; 0.1 p.c. of Asiatic countries; 0.5 p.c. of the United States; and 0.1 p.c. of other countries. Table 1, classifying the 1951 population by country of allegiance and origin, shows that 98.0 p.c. of the persons of British Isles origins and 99.7 p.c. of those of French origin owed allegiance to Canada. Corresponding percentages for other European and Asiatic origins were 89.3 p.c. and 78.7 p.c., respectively.

1.—Population by Country of Allegiance and Origin, 1951

[1] Includes persons reported as "stateless".
[2] Includes English, Irish, Scottish, Welsh and Manx.
[3] Includes Danish, Icelandic, Norwegian and Swedish.

The following statistics show the number of citizenship certificates "issued" and more detailed information on certificates "granted" in recent years. The former, in Table **2**, include both certificates granted to new citizens and those issued for various reasons to persons who are already Canadian citizens. Tables **3** to **7** refer only to "grants" which means that the holder became a Canadian citizen by the grant of such certificate.

Citizenship Certificates Issued.—In 1959, 115,247 Canadian citizenship certificates were issued as compared with 133,560 in 1958. During 1959, the Canadian Citizenship Registration Branch recorded 5,037 certificates of registration of births abroad, 507 declarations of intention, 80 declarations of retention of Canadian citizenship and 15 petitions for resumption of Canadian citizenship. Certificates issued free to persons who had had active military service numbered 585. Corresponding figures for 1958 were 5,321 registrations of births abroad, 629 declarations of intention, 120 declarations of retention, 18 petitions for resumption and 425 certificates issued free to persons who had had active military service.

	Totals	**141,915**	**133,560**	**115,247**

Characteristics of Persons Granted Citizenship Certificates in 1959.—Comparable detailed statistics showing the characteristics of persons granted citizenship certificates are available since 1953; such characteristics include age, marital status, occupation, period of immigration, residence and previous nationality.

Of the 71,280 persons granted citizenship in 1959, about 1 p.c. had migrated to Canada before 1921, 3 p.c. in the period 1921-40, 15 p.c. in the period 1941-50 and 80 p.c since 1950. Regionally these new citizens were distributed as follows: 1 p.c. in the Atlantic Provinces, 14 p.c. in Quebec, 60 p.c. in Ontario, 15 p.c. in the Prairie Provinces and 10 p.c. in British Columbia. Just under 83 p.c. of them resided in urban centres.

Almost 19 p.c. of the persons naturalized during 1959 had been citizens of Germany 16 p.c. had been citizens of Italy, 15 p.c. had been citizens of the Netherlands, 13 p.c had owed allegiance to a British Commonwealth country, 5 p.c. reported former allegianc to countries now parts of the U.S.S.R., and Poland was country of allegiance for 6 p.c Most of the persons designated as "stateless" were born in Poland, the U.S.S.R., Yugoslavia Hungary, Germany, Czechoslovakia and Austria.

Of the males granted citizenship certificates in 1959, 21 p.c. were employed in manufacturing and mechanical occupations, 13 p.c. were employed in construction, 10 p.c. were labourers in other than primary industries, 8 p.c. were in service, 8 p.c. were in professional occupations, 6 p.c. in agriculture, 4 p.c. in transportation and communication and 4 p.c. in proprietary and managerial occupations. Of the females granted certificates, 54 p.c. were homemakers; among those employed outside the home, 28 p.c. were in clerical occupations, 27 p.c. in manufacturing and mechanical occupations and 25 p.c. in service occupations.

CHAPTER V.—VITAL STATISTICS*

CONSPECTUS

	Page
Section 1. Summary of Vital Statistics	203
Section 2. Births	208
Section 3. Deaths	216
Subsection 1. General Mortality	216
Subsection 2. Infant Mortality	220
Subsection 3. Maternal Mortality	224
Section 4. Natural Increase	226
Section 5. Marriages and Divorces	228
Subsection 1. Marriages	228
Subsection 2. Dissolutions of Marriage (Divorces)	231
Section 6. Canadian Life Tables	232
Section 7. International Comparisons of Vital Statistics	234

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Vital statistics provide a record of population development—a measure of the pace of growth, marriage and fertility trends, the distribution of people in and entering the various age groups, the relative importance of each of the causes of death, and so on. The continuity of such data gives a constant guide to the planning, operation and evaluation of a variety of national activities, particularly in the fields of public health, education, community planning and various types of business enterprise.

This Chapter gives a fairly detailed coverage of the vital statistics information available, gives life tables for males and females and presents a comparison of the principal Canadian vital statistics rates with those of other countries. In making international and interprovincial comparisons of birth, death and marriage rates, it is important to note that part of the differences observed over a period of years as between countries, provinces or local areas may be caused by differences in the sex and age distribution of the populations involved. Similarly, rates for any one area may be affected by changes in such distribution.

The population data upon which vital statistics rates are computed are given in Chapter III, in DBS census bulletins, and in reports on intercensal estimates of population. Births and deaths are classified by place of residence (births according to the residence of the mother) and marriages by place of occurrence.

The history of the collection of vital statistics in Canada is covered in the 1948-49 Year Book, pp. 185-188. Detailed information is given in *Vital Statistics* (Preliminary Report) (Catalogue No. 84-201), *Vital Statistics of Canada* (Catalogue No. 84-202) and in other regular and special reports; in addition, certain unpublished data are available on request.

Section 1.—Summary of Vital Statistics

Table **1** gives a summary of the principal vital statistics of the provinces of Canada from 1936 to 1959 and Table **2** shows certain vital statistics for urban centres having at least 10,000 population at the date of the 1956 Census. Corresponding data for 1921—when the collection of national vital statistics was initiated—to 1935 are shown in previous issues of the Canada Year Book.

---

* Revised in the Vital Statistics Section, Health and Welfare Division, Dominion Bureau of Statistics.

1.—Summary of Principal Vital Statistics, by Province, 1936-59

NOTE.—Figures for the years 1921, when the collection of national statistics was initiated, to 1935 are given in previous editions of the Year Book.

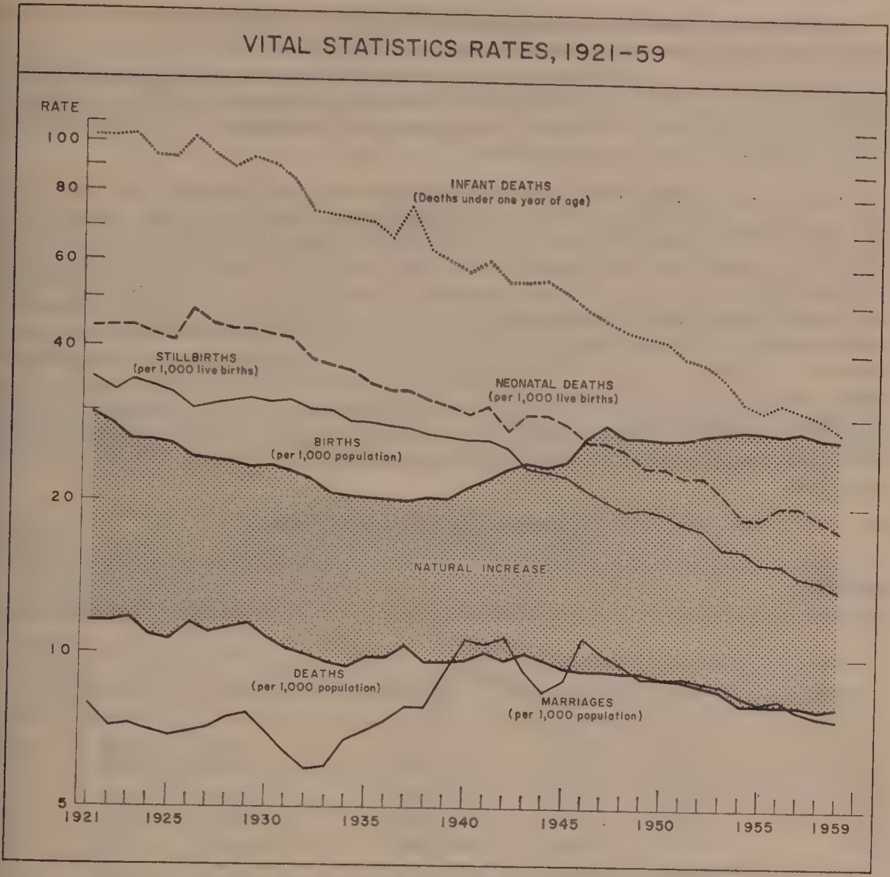
Section 2.—Births*

The Canadian birth rate in 1921 was 29 per 1,000 population. As a rate of 35 is very high for countries of modern western civilization, the Canadian rate had probably not fallen far, nor for long, before 1921. It fell continuously until 1937 when it reached a low of 20 but, as a result of economic recovery and the War, it rose to 22 in 1940, 24 in 1943 and nearly 29 in 1947. Since then it has fluctuated between 27 and 28.5; in 1959 it stood at 27.5.

The birth rates in most provinces followed similar trends but there were some regional differences in the birth rate pattern in recent years. Although all provinces had record high rates immediately following World War II, average birth rates in Ontario and the western provinces were higher during 1951-55 than those for the 1946-50 period, while those for Quebec and the Maritimes were lower. In fact, Ontario, British Columbia and Alberta had record high crude birth rates during the 1956-59 period.

---

* For international comparisons, see Section 7, pp. 234-235.



VITAL STATISTICS RATES, 1921–59

It is often assumed that the Province of Quebec has the highest birth rate in Canada, but Table 1 shows that since the late 1930's or early 1940's Newfoundland and, in some years, New Brunswick have had higher rates than Quebec. In 1959, Newfoundland had a crude rate of 33.0 followed by Alberta with a rate of 30.6, Quebec with 28.5 and New Brunswick with 27.9; British Columbia and Manitoba had the lowest rates at 25.5 and 25.8, respectively. However, these crude rates are based on total population and therefore do not reflect the fertility of the women who are of reproductive age in the different provinces. A more accurate measure of fertility is the rate based on the number of married women in the population in the main reproductive ages, 15 to 44 years. The numbers of children born in 1957, 1958 and 1959 to every 1,000 married women in this age group were as follows:—

Province	*1957*	*1958*	*1959*
Prince Edward Island	223	214	221
Nova Scotia	194	189	190
New Brunswick	229	216	213
Quebec	218	212	209
Ontario	169	166	167
Manitoba	174	168	175
Saskatchewan	189	188	190
Alberta	194	194	194
British Columbia	163	163	163
CANADA[1]	188	184	185

---

[1] Excludes Newfoundland and the Territories for which data are not available.

On this basis, Prince Edward Island, New Brunswick and Quebec, in that order, had the highest fertility rates and British Columbia and Ontario the lowest.

Also contrary to popular impression, since 1953 more babies were born each year in Ontario than in the Province of Quebec; in 1959, 157,124 babies were born to Ontario mothers as compared with 142,383 to Quebec mothers. Altogether, 479,275 children were born in Canada in 1959, a record number.

Sex of Live Births.—Wherever birth statistics have been collected they have shown an excess of male over female births. No conclusive explanation of this excess has yet been given. Nevertheless it is so much of an accepted statistical fact that a proper ratio of male to female births has become one of the criteria of complete registration. The number of males to every 1,000 females born in Canada has averaged around 1,057 since the middle 1930's. Provincial sex ratios vary much more widely because of the relatively small number of births involved—the smaller the total number of births, the greater the chance of wide sex-ratio variations from year to year. Another commonly acknowledged fact in many countries—although there is no generally accepted explanation for it—is that the male ratio appears to rise during or shortly after major wars. This seems to have happened in Canada between 1942 and 1945 when the ratio rose to an average of 1,064 during these four years as compared with averages of 1,054 between 1931-41 and 1,057 since 1946.

3.—Sex Ratios of Live Births, 1936-59

Note.—Figures for Newfoundland are included from 1949 and those for the Yukon and Northwest Territories from 1950.

Hospitalized Births.—In 1959 over 93 p.c. of all Canadian births occurred in hospital. Table 4 shows the rise in hospitalized births in each province since 1931. Before the initiation of the federal-provincial hospital insurance program in 1958, in which all provinces with the exception of Quebec were participating by the end of 1959, wide variations existed among the provinces in percentages of hospitalized births. Such variations were caused by the existence of prepaid or provincially sponsored hospital, maternity or medical care plans in some provinces, the unavailability of hospital facilities in others—particularly in remote rural areas—and preference for home delivery in some local areas. Although some variation still exists, the operation of the hospital insurance program has probably been responsible for the noticeable increases in hospitalized births in provinces that previously had lower proportions—New Brunswick, for example, where hospital insurance was put into effect on July 1, 1959.

[1] Excludes Newfoundland for which data are not available.

Births in Urban Centres.—Table 2, pp. 206-208, shows the number of births in 1959, as compared with the average for 1951-55, to mothers residing in urban centres of 10,000 population or over.

Illegitimacy.*—In 1959, over 4 p.c. of the live births in Canada were illegitimate. This percentage is low compared with that of many countries of the world.

---

* The term "illegitimate", for statistical purposes, does not refer to births conceived out of wedlock but to those in which parents reported themselves as not having been married to each other at the time of the birth or the registration of the birth.

[1] Figures for Newfoundland are included from 1949, and those for the Yukon and Northwest Territories from 1951.

Stillbirths.*—The 6,560 stillbirths in 1959 represented a rate of 13.7 for every 1,000 foetuses born alive. The stillbirth rate has been decreasing steadily and has been cut by more than half over the past quarter-century. Although the variations between provincial rates have never been wide, rates in some provinces have been reduced more than in others. The stillbirth rate among unmarried mothers has been consistently higher than that among married mothers, but the difference has been narrowing in recent years; in 1959 the rate was actually lower than that for married mothers.

---

* In recent years, provincial laws define a stillbirth, as here compiled, as the birth of a foetus after 28 weeks gestation which, when completely separated from the mother, "does not show any sign of life"; in earlier years they include only those of 28 weeks gestation which showed no sign of "breathing".

[1] Exclusive of Newfoundland for all years and of the Yukon and Northwest Territories for 1936-50. [2] Figures for Newfoundland are included from 1949.

Multiple Births.—Approximately one confinement in 90 in Canada results in the birth of more than one child as compared with one in 85 several years ago—in other words, the chances of a confinement resulting in the birth of more than one child are fewer now than formerly. Other facts illustrated by Table 7 are that the proportion of stillbirths is higher among multiple than among single births and is about twice as high for twins and between three and five times as high for triplets.

Fertility Rates.—Sex and age distribution of the population is an important factor in determining birth, death and marriage rates. More than 99 p.c. of the children born are to women between the ages of 15 and 50, so that, as noted earlier, variations in the proportion of women of these ages to the population as a whole will cause variations in the crude birth rates of different countries or regions even though the fertility of women at each age may be the same. Measures of fertility which are independent of the sex and age distribution of the population have therefore been devised. The best known of these are age-specific fertility rates—either per 1,000 *total* women* or per 1,000 *married* women in these age groups—and reproduction rates.

Ages of Parents.—Age of parents is an important variable in any analysis of birth statistics. The distribution of legitimate and illegitimate live births by age of the parents is given in Table **8**, and for stillbirths in Table **9**, as well as the average age of parents.

Close to 7 p.c. of the legitimate children born in 1959 were born to mothers under 20 years of age, in over one-third of the births the mother was under 25 years, and in almost two-thirds, under 30 years; in one out of six births the father was under 25 years of age, and in almost 48 p.c. of all births the father was under 30 years. On the other hand, over one-third (37.5 p.c.) of the illegitimate infants born were born to mothers under 20 years of age and an additional one-third to mothers under 25 years.

Table **9** illustrates the fact that the risk of having a stillborn child increases with the age of the mother. Although stillbirth rates for mothers of all ages have been declining in recent years, they continue to be three times as high among mothers of 40-44 years and about four times as high among those over 45 years as for mothers under 30.

The average age of mothers who bore stillborn children in 1959 was 30.2 years; Table **8** shows that the average age of mothers who bore legitimate live-born children was 28.2 and those who bore illegitimate live-born offspring was 23.8.

9.—Stillbirths and Rates per 1,000 Live Births, by Age of Mother, 1959

Order of Birth.—Table **10** shows the order of birth of all live-born infants in 1959 according to age of the mother. As would be expected, 28,152 or three out of every four of the 37,928 infants born to mothers under 20 years of age were first children, whereas almost six out of every ten of the children born to mothers of 20-24 years were second or later children. This is a reflection of the earlier marriages and heavy fertility of recent years.

Table 11 summarizes the pattern of family formation since 1936. The results of the immediate postwar 'baby boom' are obvious—57.9 p.c. of the infants born in 1947 were first or second children while fewer than half of the 1959 babies were first or second children.

Section 3.—Deaths*

The Canadian death rate has moved downward from 10.2 per 1,000 of the population in 1931 to 8.2 for each of the years 1954 to 1957 and, following a record low of 7.9 in 1958, stood at 8.0 in 1959. Table 1, pp. 204-205, shows that this decline has been apparent in varying degrees in all provinces. The generally low rates in the Prairie Provinces are partly the result of their younger average population; the uniformly higher rate in British Columbia is mainly attributable to a high proportion of people in the older age groups.

Subsection 1.—General Mortality

Age and Sex Distribution of Deaths.—There has been a considerable reduction in infant mortality over the past 25 or 30 years, although more deaths still occur in the first year of life than in any other single year. Of the 104,517 deaths occurring in 1931, 25,737 or almost one-quarter were of children under five years of age and over three-quarters of those were of children under one year of age. Of the 139,913 deaths in 1959, 15,671 or 11 p.c. were of children under five years of age and, of those, 13,595 or nearly 87 p.c. were under one year. Most of the reduction took place among children over the age of one month but there was also a notable decrease in all childhood ages up to five years.

The trend in the over-all mortality pattern has been steeply downward since the early 1920's, the most important reduction being in the childhood and early adult ages. In 1931 over 19 p.c. of all male deaths were of persons five to 45 years of age; in 1959 only a little over 10 p.c. of the deaths occurred in this age group. Among females in the five to 45 age group the proportion dropped from just under 22 p.c. to less than 8 p.c. in the same comparison. While death rates for males up to age 45 have been roughly halved during the past 25 years, those for females under 45 years have been reduced as much as three to four times. In other words, the death rates for females at every age have declined more than those for males; the male rates have almost always been consistently higher than those for females and the differences are widening.

These reductions in the mortality rates in early and middle years of life have had the effect of increasing the number of people in the older age groups and raising the average age at death. In 1931 the average age at death of males was 43.1 years and of females 44.8 years; by 1959 this had advanced to 59.1 years and 62.3 years, respectively. These trends are indicated clearly in Table **12**.

---

* For international comparisons, see Section 7, pp. 234-235.

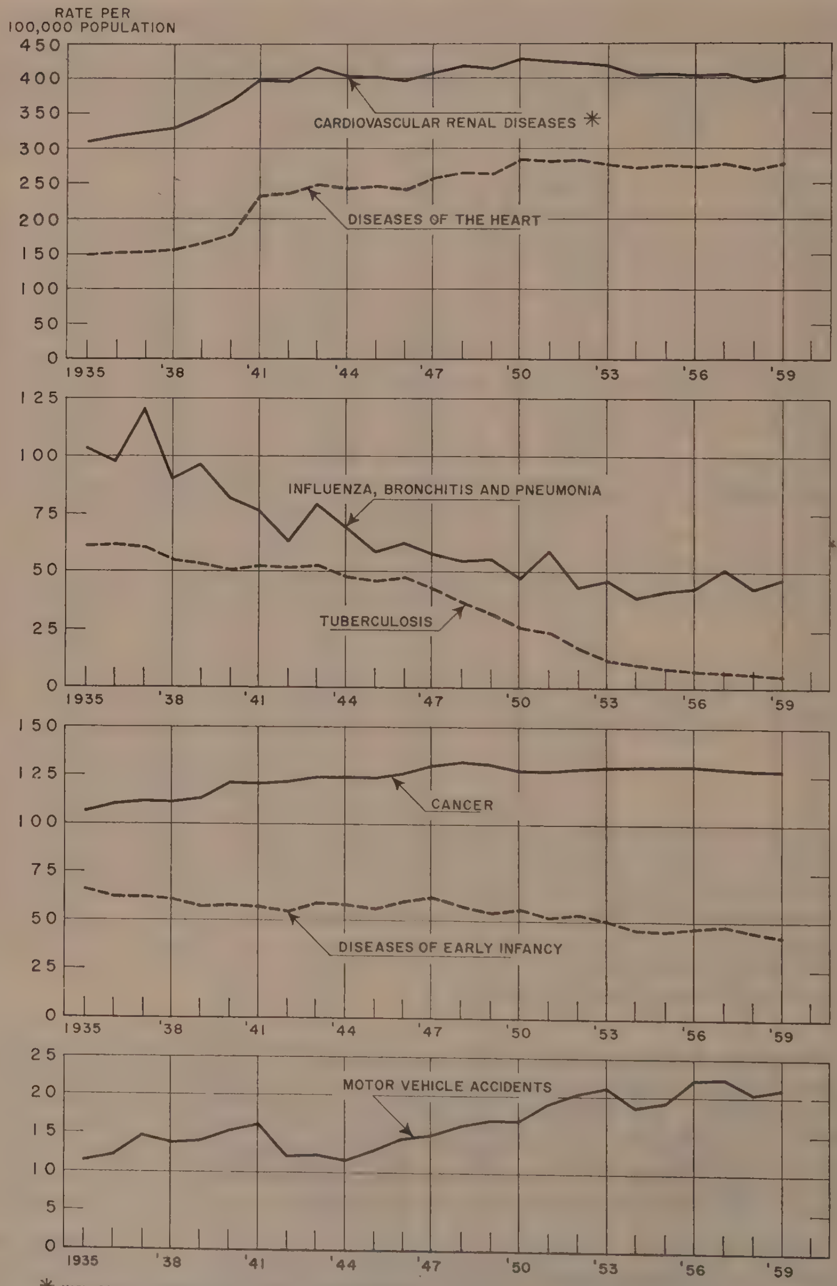
Deaths in Urban Centres.—Table 2 on pp. 206-208 shows the number of deaths in 1959 for urban centres of 10,000 population or over. Without a knowledge of the age composition of each centre it is difficult to compare rates for various centres. The migration of young people from rural areas to some urban centres and of older people to other centres creates a favourable situation for a low or high rate as the case may be. However, despite differences in the age factor, some urban areas have very low death rates compared with other centres of the same size and with other areas in the same province.

Causes of Death.—Table 13 shows the deaths and death rates in Canada grouped according to the International Abbreviated List of 50 Causes. About 80 p.c. of the deaths are caused by diseases of the heart and arteries, cancer, accidents, diseases of early infancy, the respiratory diseases—tuberculosis, pneumonia and influenza—and nephritis.

MAJOR CAUSES OF DEATH



* INCLUDES: DISEASES OF HEART (INCL. RHEUMATIC FEVER) AND ARTERIES, INTRACRANIAL LESIONS, CHRONIC NEPHRITIS.

The rise in the average age at death has already been noted (p. 216). Deaths from causes that mainly affect children and young adults have declined. Diphtheria, for example, has been almost wiped out—in fact there was not a single death from diphtheria during 1959—and tuberculosis has been greatly reduced. On the other hand, the aging of the population has increased the proportion of deaths from certain causes that affect older people. Thus, cancer and diseases of the cardiovascular-renal systems now account for a substantially larger proportion of all deaths than formerly.

These trends indicate the remarkable success that has attended the attack by health authorities on the infective and contagious diseases which in the past have constituted such a great hazard in the early and young adult years of life. They have served similarly to emphasize the emergence of the chronic and degenerative conditions of later life as the targets toward which the public health programs of the future will be directed. In effect, Canada has shared the experience of most western nations in exchanging a high mortality in younger life for high morbidity in older age groups.

The Chart opposite shows death rates for the major cause groups from 1935-59.

Subsection 2.—Infant Mortality

Table 1, pp. 204-205, and Table 14 show the striking improvement that has taken place in the rate of infant mortality during the past quarter-century. Although 84,507 of the 2,748,360 children born in the years 1954-59 died before reaching their first birthday, 173,839 others lived who *would have died* at the rate prevailing in the period 1926-30.

Table 14 shows that mortality among male infants is 25 to 30 p.c. higher than that among female infants for Canada as a whole, with wider variations for the individual provinces. For the country as a whole in 1959, out of every 1,000 infant boys born alive, 32 died before reaching their first birthday, whereas out of every 1,000 infant girls 25 died within one year of their birth. As already pointed out, there are on the average 1,057 males born to every 1,000 females, but because male infant mortality is higher the excess of males is reduced greatly by the end of the first year. For example, in 1957-59 there were 728,821 male children born compared with 689,665 female children, an excess of 39,156 or 5.7 p.c.; during the same period, 24,292 male children died during their first year compared with 17,998 female children so that the excess of males at one year of age was reduced to 32,862 or under 5 p.c.

As indicated in Tables **1**, **2** and **14**, infant mortality rates have varied from province to province and from one locality to another. One of the principal causes of these variations appears to have been the different proportions of births taking place in hospital or under proper prenatal and postnatal care (see also p. 210). Many other factors have also been important, particularly the supervision of water supplies, improved sanitation, the pasteurization of milk, the use of antibiotics, more and better pædiatric services, improved obstetrical and hospital nursing services, improved home environment as a result of generally higher living standards and, in recent years, the lower age of mothers.

Infant Mortality in Urban Centres.—Because of the relatively small numbers of infant deaths in individual cities and towns, the rates for these centres usually vary widely from year to year. As is evident from Table 2, pp. 206-208, many cities and towns have maintained consistently low rates as compared with the national rate or the rate for the province in which they are situated.

Age at Death.—In 1959 the ages of the 13,595 infants who died within a year of birth were by no means evenly spread over the twelve-month span. In fact, 12,393 or 91 p.c. of the infants were less than six months old and 8,841 or 65 p.c. were less than one month old. There was a sharp drop to 1,126 in the second month with gradual reductions thereafter to the eleventh month. Of the 8,841 deaths during the first month, 7,504 occurred in the first week of life, and no less than 4,422 took place in the first day.

Causes of Infant Deaths.—In 1959 more than two-thirds of the infant deaths were caused by immaturity, congenital malformations, pneumonia, postnatal asphyxia and atelectasis, and injury at birth. Immaturity was the underlying cause of 2,369 deaths, followed closely by congenital malformations with 2,149 fatalities. Pneumonia took the lives of 1,843 infants. Postnatal asphyxia accounted for 1,535 deaths and injury at birth for 1,400.

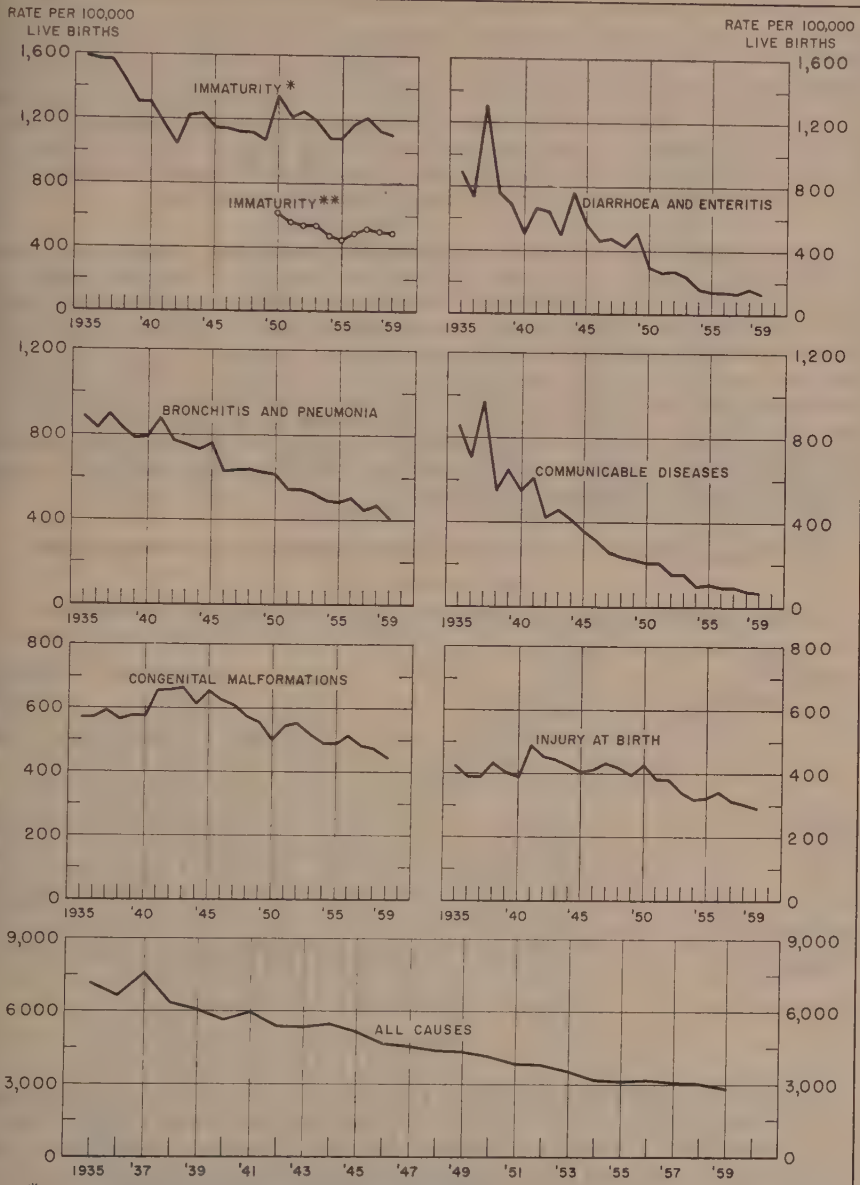
LEADING CAUSES OF INFANT DEATHS



* DUE TO CHANGES IN CLASSIFICATION, NOT STRICTLY COMPARABLE OVER THE PERIOD; INCLUDES ALL DEATHS INVOLVING IMMATURITY EITHER AS THE UNDERLYING CAUSE OR AS A COMPLICATION.

** INCLUDES CATEGORIES 774–776, INTERNATIONAL STATISTICAL CLASSIFICATION (6th. Rev.) WHERE IMMATURITY REPORTED ALONE AS UNDERLYING CAUSE.

Subsection 3.—Maternal Mortality

As indicated in Table 1, pp. 204-205, the number of mothers who die in pregnancy and childbirth has been greatly reduced during the past two decades. Although the number of births has been much greater in recent years, the number of maternal deaths declined steadily from 1930 (when there were 1,215 deaths and a rate of almost 50 deaths for every 10,000 births delivered alive) to a record low of 255 in 1957 followed by a slight rise to 263 in both 1958 and 1959. Since 1945 the rate of maternal mortality has been less than 20 per 10,000 live births delivered and has been under 10 since 1951. In 1959 there was a slight decrease in the rate to 5.4 per 10,000 live births from 5.5 in 1958. Mortality among unmarried mothers is higher than among married mothers.

Age at Death.—Table 16 shows the distribution of maternal deaths by age group and average age at death. The latter is about four years higher than the average age of all mothers at the time of childbirth. The rates per 10,000 live births by age group show that age is a most important factor in maternal mortality. Until very recent years the risk of mortality at childbirth was directly related to the age of the mother; in other words, for all mothers of over 20 years the rate rose with increasing age. Though death rates for all age groups of mothers have been declining, recently there have been rather significant changes in the rates. Formerly, the rate for mothers in the age group 30-34 was twice or three times as high as the rate for the 20-24 group, but in recent years mortality rates for the four age groups of mothers under 35 years of age have not been far apart, although after age 35 a sharp rise has occurred.

Causes of Maternal Deaths.—Table 17 shows the main causes of maternal deaths during the years 1957-59. Until a decade or so ago, sepsis and toxæmia were by far the most important causes of death of mothers at childbirth. The danger of death from sepsis and other infection has been sharply reduced over the past 15 to 20 years through the use of antibiotics and probably also through increased use of medical services. On the other hand, the number of deaths caused by toxæmia arising during pregnancy and other complications of both pregnancy and delivery represent continuing problems. Hæmorrhage during pregnancy or delivery, which has been another important cause of mortality among mothers, has shown some reduction in recent years.

Section 4.—Natural Increase*

The rate of natural increase in Canada (excess of births over deaths) prior to 1930 was 13 or more per 1,000 population. Partly as a result of the depression, the birth rate declined more than the death rate and the rate of natural increase fell to 9.7 in 1937. Higher birth rates during and after World War II and a gradually declining death rate caused the natural increase rate to rise steadily from 10.9 in 1939 to a record 20.3 in 1954. Since that time there has been a slight drop but the rate stood at 19.5 in 1959—probably the highest among the more industrially developed countries of the world.

Table 18 shows the rates of natural increase in the provinces and for each sex separately. The high rates in the Prairie Provinces are partly accounted for by their relatively younger populations and consequent low death rates. High birth rates and declining death rates, particularly in Quebec, have given Newfoundland, Alberta, Quebec, Saskatchewan and New Brunswick the highest rates of natural increase in Canada in recent years (excluding the Yukon and Northwest Territories).

The rates of natural increase are higher for females than for males in all provinces because of the higher death rates for males. In the western provinces particularly, the ratio of males to females in the total population is higher than in other parts of Canada and this tends to lower the rate of natural increase. In Canada, a country with a fairly young population and where immigration has been on a large scale, an excess of males is to be expected but the higher rate of natural increase for females may gradually reduce this excess. The trend is toward an eventual excess of females in the total population—as there now is in most European countries—unless immigration again raises the male ratio or death rates among males are greatly reduced.

---

* For international comparisons, see Section 7, pp. 234-235.

[1] Figures for Newfoundland are included from 1949 and those for the Yukon and Northwest Territories from 1950.

Natural Increase in Urban Centres.—The classification of births and deaths b place of residence makes it possible to compile the natural increase in the population o urban centres; the figures are presented in Table **2**, pp. 206–208.

Section 5.—Marriages and Divorces

Subsection 1.—Marriages*

In 1959 Canada's marriage rate was 7.6 per 1,000 population, the lowest in over twent years. Provincial rates varied from 6.3 per 1,000 population for Prince Edward Islan to 8.4 for Alberta. Table **19** shows the number of marriages and the marriage rates pe 1,000 population for Canada and the provinces, and percentages of brides and bridegrooms according to place of birth. For the country as a whole, over 80 p.c. of the grooms c 1959 were born in Canada and nearly 66 p.c. in the province in which they were married over 84 p.c. of the brides were born in Canada and over 72 p.c. in the province in whic they were married. However, as would be expected because of heavy immigration c young persons in the postwar years, an increasing number of marriages are of persons bor outside the country. For example, 19.6 p.c. of the grooms married in 1959 were bor outside Canada compared with 11.7 p.c. in 1941; for brides the percentages were 15.9 p. and 8.4 p.c., respectively. However, there are wide variations in this pattern as betwee provinces; in the older Atlantic Provinces and Quebec there is a greater tendency than i the other provinces to marry native Canadians. In these areas both partners in a marriag are often born in the same province.

---

* For international comparisons, see Section 7, pp. 234-235.

---

[1] Newfoundland included from 1951 and the Yukon and Northwest Territories from 1956.

Age and Marital Status of Brides and Bridegrooms.—Table 20 shows that over 91 p.c. of the marriages in 1959 were between persons who had not been married previously; 4.8 p.c. of brides and 4.4 p.c. of bridegrooms had been widowed, and almost 4 p.c. of the marriages were of divorced persons. The average age at marriage of bachelors was just under 26 years and that of spinsters just over 23 years. The average age of widowers and widows at time of remarriage was slightly more than double that of bachelors and spinsters. Over 91 p.c. of the spinsters married in 1959 were under 30 years of age, 34 p.c. were under 20 years and 45 p.c. were between 20 and 25. Over 84 p.c. of th bachelors were under 30 years of age, 7 p.c. of them under 20 and nearly 50 p.c. from 2 to 24 years of age.

In recent years, couples have been marrying younger than they did a generation ago Since 1940 the average age of men at the time of their first marriage has dropped from 2 years to less than 26; that of girls from 24 years and eight months to 23 years and on month.

Religious Denominations of Brides and Bridegrooms.—The distribution of brides and bridegrooms by religious denominations is roughly the same as that for the population as a whole. Table 21 shows the very strong influence that religion has on marriage. About 72 p.c. of all marriages are between persons of the same religious denomination; in 1959 among those of Jewish faith it was about 91 p.c.; among Roman Catholics about 88 p.c.; United Church about 61 p.c.; and Eastern Orthodox about 68 p.c.

[1] Includes Greek Catholic.

[2] Percentage of marriages between contracting parties of the same religious denomination.

Subsection 2.—Dissolutions of Marriage (Divorces)

Before World War I the number of divorces granted in Canada was very small. There were fewer than 20 divorces each year from Confederation to 1900, 21 in 1903, 51 in 1909 and 60 in 1913. These numbers represent less than one per 1,000 of the yearly number of marriages. At the end of World War I the number of divorces showed a definite increase, advancing to a peak of 8,199 in 1947, then declining gradually to a postwar low of 5,270 in 1951. From 1952 to 1958 the number fluctuated between 5,650 and 6,688, and in 1959 stood at 6,222.

22.—Dissolutions of Marriage (Divorces), by Province, 1936-59

Note.—Figures for individual years from 1900 to 1950 are given in the 1956 Year Book, p. 230.

Section 6.—Canadian Life Tables

Four official series of life tables for Canada and the provinces and regions have been published to date, based on deaths in the three-year period around each of the Censuses of 1931, 1941, 1951 and 1956. In addition, tables have been computed for Canada as a whole for the years 1945 and 1947 based on estimated populations by sex and age and the deaths recorded in those years. The life table values for 1956 are given in abbreviated form in Table 23.

Life tables give a summary of the health and general conditions of survival of the population in a conventional, standard form. A hypothetical number (100,000) of births of each sex is assumed as a starting point. The life tables show how, on the basis of the mortality rates at each age in the given years, these 100,000 of each sex are reduced in number by death. For example, during the year 1956, of 100,000 males born, 3,472 died in their first year so that 96,528 survived to one year of age; 241 died in their second year so that 96,287 survived to two years of age, and so on. At 100 years of age only 87 of the original 100,000 would have survived. The probability of death at each age is the ratio between the number of deaths and the population at each age. Finally, the expectation of life is the average number of years which a person might expect to live if the mortality rates in the given years remained constant.

Mortality rates at all ages for males have been almost consistently higher than for females. Males have the highest risk of mortality as compared with females during their first year of life, from their late 'teens to early 30's and from age 50 to 65. For both boys and girls the risk of mortality drops rapidly during childhood and is lowest at about age 10, increases gradually to about age 40 for males and about 50 for females and then rises steeply with advancing age. At the mortality rates given in the 1956 life table (see Table 23) about 13,000 males would have died before reaching age 50 as compared with about 8,700 females; only 56,466 of the original group of 100,000 males would have survived to age 70 as compared with 70,327 females.

23.—Canadian Life Table, 1956

By 1956, life expectancy at birth in Canada had reached a new high record of 67.6 years for males and 72.9 for females—comparable to the expectancy for other countries of the world with highly developed programs of medical and public health care. Once a child has passed its first year of life, however, its life expectancy increases appreciably. At one year of age a male child at present mortality risks may, on the average, expect to live an additional 69.0 years and a female 74.0 years, representing for an infant boy a gain of 1.4 years over his expectation at birth and for an infant girl a gain of 1.1 years. The expectation of life of a 15-year-old boy is 55.9 additional years; of a 15-year-old girl 60.6 years. At 25 years of age the expectation is about 46.6 years for men and almost 51 years for women and at age 70, 10.5 years for men and 12.2 years for women.

Table 24 summarizes the life expectancy figures extracted from the Canadian life tables for 1931, 1941, 1951 and 1956. According to these figures, life expectancy at birth for men increased 1.3 years from 1951 to 1956 compared with 3.4 years from 1941 to 1951 and 2.9 years from 1931 to 1941; females gained 2.1 years from 1951 to 1956 compared with 4.5 years and 4.2 years, respectively, in the preceding decades. Thus, from 1931 to 1956 a total of 7.6 years was added to male life expectancy and 10.8 years to female longevity.

The increases in life expectancy have been predominantly at the younger ages, particularly in infancy, and diminish with advanced age. For example, since 1931, 3.2 years have been added to the life expectancy of a five-year-old male, 2.1 years to a 20-year-old, nine months to a 40-year-old and three months to a 60-year-old as compared with 7.6 years for a newborn male. During this period, life expectancy for a five-year-old female gained 7.2 years, for a 20-year-old 6.0 years, for a 40-year-old 3.7 years and for a 60-year-old 2.2 years as compared with 10.8 years for a newborn female.

Longevity has improved for both sexes, though more so and at all ages for females, but there has been only slight improvement for males beyond middle life. Briefly, the rapid decline in the death rate for infants of both sexes is continuing but the declines are slower with advancing age, so that relatively stationary death rates have been establishe from about 50 years onwards for males and from about 80 years onwards for females.

The fact that such a pattern exists is important in interpreting the results of thes life tables. The arbitrary population base of 100,000 of each sex in the 1956 tables, fo example, has been subjected to the mortality rates in effect in 1955-57, and the life expectancy computed as if those death rates at each age were to prevail during their lifetime Actually the theoretical 200,000 infants born in 1955-57 will most probably have a patter of survival and life expectancy quite different from that of the present life tables as the will spend most of their lives under conditions of public health and medical care which i all likelihood will be superior to those prevailing in 1955-57.

The improvement in life expectancy, particularly among children and adolescents is caused mainly by the substantial reduction in recent years in mortality from infectiou diseases; on the other hand, diseases associated with middle and old age are much les amenable to control. It is therefore unlikely that improvement in life expectancy in th future will be comparable to that of the past quarter-century. As approximately 11 p.c of deaths in 1955-57 occurred among infants and an additional 75 p.c. among persons ove age 50, any additional improvement must come as the result of further declines in mortalit from conditions associated with childbirth and early infancy, further control of infectiou diseases, prevention of accidents, and advances in combating diseases associated wit middle and old age, such as cardiovascular-renal conditions and cancer.

24.—Expectation of Life 1931, 1941, 1951 and 1956

Section 7.—International Comparisons of Vital Statistics

Table **25** gives a summary of Canada's national and provincial vital statistics rate along with those of several other countries. It will be noted that among the countrie listed the low crude death rate in Canada is bettered by only three countries—the Unio of Soviet Socialist Republics, Japan and the Netherlands—and that some of the province have lower rates than most other countries. The birth rate also helps to give Canada on of the fastest growing populations, currently ranking sixth among those listed. Howeve ten countries reported lower rates of infant mortality.

25.—Principal Vital Statistics Rates of Selected Countries, 1959

NOTE.—Countries are ranked according to the highest rates for births, marriages and natural increase and according to the lowest for deaths.

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Canada's postwar growth has presented a challenge in the planning of health an welfare services. Population has increased by one-half in this period. General high level of prosperity, growing urbanization, larger numbers of both young and old in the population, and new concepts and knowledge in health and welfare matters have all contribute to needs for additional services and to greater interdependence between the differen health and welfare professions.

During 1960, the Hospital Insurance and Diagnostic Services Act, proclaimed i 1957, became nation-wide for in-patient general hospital services, and some provincia plans were moving in the direction of extended coverage for special hospital and outpatient care. During the year, more than two and one-half million patients were admitte to general hospitals and over 90 p.c. of the almost one-half million births occurred i hospital. Insurance for medical care in Canada was still largely based on voluntar prepayment plans; approximately one-half the population carried some medical insuranc The possibility of government participation in public medical care, beyond the specia provision existing for certain indigent groups, received increasing public attention.

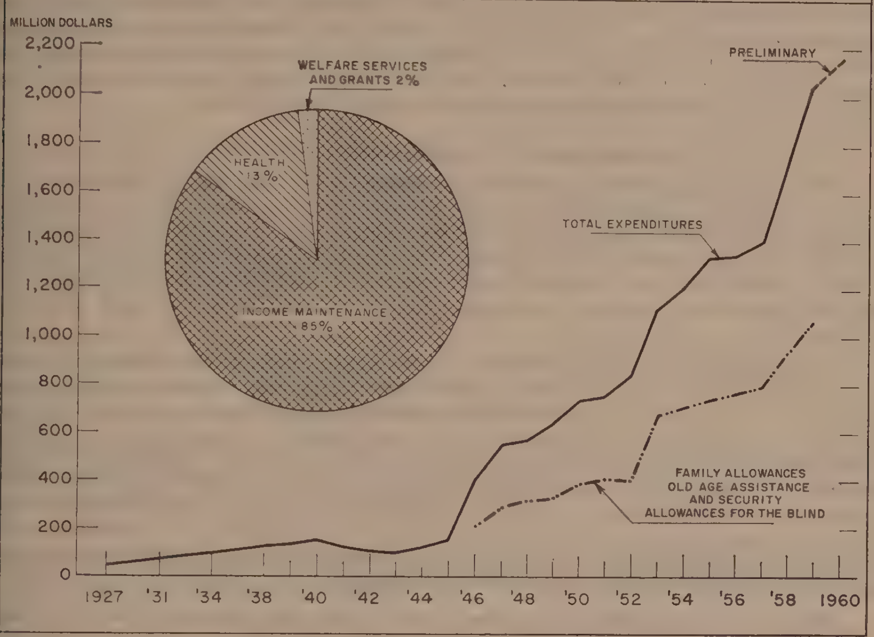
FEDERAL EXPENDITURES ON HEALTH AND SOCIAL WELFARE
YEARS ENDED MAR. 31, 1928–60



Development in the sciences related to medicine, improved health services and raised nutritional and other standards are contributing to generally favourable health conditions—to a declining death rate and a longer expectation of life. Progress against the contagious diseases emphasizes the problems presented by chronic illness and the disabilities of persons in the older age groups. Heart and hypertensive disease, arthritis and rheumatism are among the leading causes of disability, though residual disability from stroke, Parkinson's disease, epilepsy and multiple sclerosis also accounts for large numbers of disabled persons. The death rate for lung cancer continues to increase and cause controversy, and mental illness remains a major problem. Accidents, especially traffic accidents, constitute a steady and tragic problem particularly as they affect children. Also, Canada now shares the world-wide concern for the hazards of radiation from medical and industrial causes as well as from fallout.

Progress in the welfare field also continues to be substantial and efforts are concentrated on remaining problems, some of which are of considerable magnitude. Rapid urbanization, increasing numbers of older persons in the population and large-scale immigration are among the forces requiring new social approaches. On the other hand, the growth of the industrial community in Canada has been associated with a marked improvement in the general standard of living. Higher real income has permitted better levels of nutrition and better housing, and improved working conditions and shorter working hours have benefited the industrial worker. During the past decade, urban technical and health services have been extended to the rural population of the country, so that many of the improvements in the national standard of living are being shared more equally by the urban and rural populations.

PART I.—PUBLIC HEALTH

Section 1.—Federal, Provincial and Local Health Services

Provincial governments bear the major responsibility for health services in Canada, with the municipality often assuming considerable authority over matters delegated to it by provincial legislation. The Federal Government has jurisdiction over a number of health matters of a national character and provides important financial assistance to provincial health and hospital services. All levels of government are aided and supported by a network of voluntary agencies working in different health fields.

Subsection 1.—Federal Health Activities

The Department of National Health and Welfare is the chief federal agency in health matters, but important treatment programs are also administered by the Departments of Veterans Affairs and National Defence. The Dominion Bureau of Statistics is responsible for the collection, analysis and publication of health statistics, the Medical Research Council and the Defence Research Board administer medical research programs, and the Department of Agriculture has certain health responsibilities connected with food production.

The Department of National Health and Welfare controls food and drugs, including narcotics (see pp. 242-248), operates quarantine and immigration medical services, carries out international health obligations, and provides health services to Indians, Eskimos and other special groups. It advises on the visual eligibility of applicants for blindness allowances and co-operates with the provinces in the provision of surgical or remedial treatment for recipients of the allowances. Under the Public Works Health Act, supervision of health conditions is provided for persons employed on federal public works. Other programs of health or medical supervision and counselling are provided to the federal Civil Service and to the Department of Transport in all matters pertaining to the safety, health and comfort of aircrew and passengers.

The Department serves in an advisory and co-ordinating capacity to the provinces and administers grants to provincial health and national voluntary agencies. Administration of federal aspects of the Hospital Insurance and National Health Grant Program has become a major activity during the past decade.

Co-ordination with the provinces on health matters is facilitated by the Dominion Council of Health, the principal advisory agency to the Minister of National Health and Welfare. Its membership includes the Deputy Minister of National Health, who acts as chairman, the chief health officer of each province, and five appointees of the Governor in Council representing the universities, labour, agriculture and French- and English-speaking women's organizations. The Council meets semi-annually. Federal-provincial technical advisory committees of the Council deal with specific aspects of public health.

National Health Grant Program.—The National Health Grant Program, inaugurated in 1948, initially made ten federal grants available to the provinces for the development and strengthening of public health and hospital services. Nine are continuing grants: the Hospital Construction, Professional Training, General Public Health, Public Health Research, Mental Health, Tuberculosis Control, Cancer Control, Venereal Disease Control, and Crippled Children Grants. A Health Survey Grant lapsed in 1953 following completion of provincial health surveys. In 1953, after a review of the first five years of the Program, three new grants were established: Child and Maternal Health, Medical Rehabilitation, and Laboratory and Radiological Services.

In 1958, federal assistance under the Hospital Construction Grant was increased to $2,000 per hospital bed (whether active treatment, chronic, mental or tuberculosis), double the previous grant for active treatment beds. In addition, funds were made available to meet up to one-third of the cost of approved alterations and renovations to existing facilities, with the provinces at least matching federal contributions.

Beginning with the fiscal year 1959-60, a redistribution and merging of certain grants was effected to provide a more flexible measure of assistance and at the same time make larger amounts available for programs where additional aid was necessary. Adjustments were also required for services aided under different grants, such as laboratory and radiological services and cancer control, now aided under the Hospital Insurance Program. The total allocation remained approximately the same but the number of separate grants was reduced to nine. The General Public Health Grant was increased by almost $5,500,000 and projects under two previously separate grants—the Laboratory and Radiological Services Grant and the Venereal Disease Control Grant—were absorbed into it. The Medical Rehabilitation and Crippled Children Grants were merged and the combined allocation increased by more than $1,000,000. The Mental Health Grant was increased by more than $1,500,000, and the Professional Training and the Public Health Research Grants by about $1,250,000 each. The Tuberculosis Control was decreased by nearly $750,000 and the Child and Maternal Health and Cancer Control Grants by lesser amounts. The grants for professional training and public health research, previously fixed amounts, were placed on a per capita basis, to increase with expansion of the population.

Up to Mar. 31, 1960, aid for hospital construction was approved for 84,111 beds, 10,852 bassinets, 16,974 nurses' beds, 436 interns' beds, and space in community health centres and laboratories exceeding 12,561 bed equivalents. Approximately 26,275 health workers had been trained or were undergoing special training and more than 6,000 health workers had been employed with federal grant assistance.

The proportion of the total grants appropriation paid out to the provinces has increased steadily. Payments in 1959-60 totalled $45,997,410 or 84 p.c. of the amount available; the average utilization during twelve years of the program was 75 p.c.

1.—Amounts Available and Amounts and Percentages Expended under the National Health Grant Program, by Grant, for the Twelve-Year Period Ended Mar. 31, 1960, and for the Year Ended Mar. 31, 1960.

Grant	1948-60 Period			Year Ended Mar. 31, 1960		
	Amount Available	Amount Expended[1]	Percentage Expended	Amount Available	Amount Expended[1]	Percentage Expended
	$	$		$	$	
Cancer Control	46,664,448	32,448,864	69.5	3,598,795	3,328,146	92.5

Medical Rehabilitation	7,500,000	3,708,363	49.4	1,000,000	673,399	67.3
Totals	**530,265,458**	**396,687,846**	**74.8**	**54,555,711**	**45,997,410**	**84.3**

[1] Expenditures may exceed amounts available, through transfer of unexpended funds from one grant to another.

Hospital Insurance.—On Jan. 1, 1961, with the entry of Quebec, the federal-provincial hospital insurance program became nation-wide with publicly financed hospital insurance plans established in all provinces and both territories. The basis of federal grants-in-aid to the provinces to help meet the cost of specified hospital services is set out under the federal Hospital and Diagnostic Services Act of 1957. The method of financing and administering the provincial plans, as well as the types of services offered above the minimum stipulated in the Act, rests with the provinces.

The range of in-patient benefits provided under the Act includes standard ward accommodation and meals, nursing service, drugs and biologicals, surgical supplies, use of operating and case-room, X-ray and laboratory procedures together with necessary medical interpretations, and the use of radiotherapy and physiotherapy facilities where available. The same benefits for out-patients, although authorized for assistance under the federal legislation, are not mandatory in provincial plans. A few provinces provide various insured services to out-patients but the majority thus far restrict out-patient benefits to emergency care following an accident.

Federal legislation covers only services provided by active treatment, chronic and convalescent hospitals. Tuberculosis and mental hospitals are excluded from the federal-provincial plan as well as institutions providing custodial care, though some provinces cover tuberculosis and mental services under the provincial programs.

There is considerable variation between provinces in the administration and financing of programs. General revenues, provincial sales tax and personal premiums are utilized in different provinces. The Federal Government pays each province 25 p.c. of the per capita cost of in-patient services in Canada as a whole, together with 25 p.c. of the per capita cost of in-patient services in a province multiplied by the average for the year of the number of insured persons in the province. On a national basis the federal contribution amounts to about 50 p.c. of shareable costs. However, for individual provinces the proportion of shareable costs met by the Federal Government varies, with a higher proportion of the cost of low-cost programs being met than of high-cost programs. Federal payments to the provinces under the program from July 1, 1958 to Dec. 31, 1959 totalled approximately $165,000,000.

Food and Drug Control.*—The Food and Drugs, Proprietary or Patent Medicine, and Opium and Narcotic Drug Acts govern the safety, purity and quality as well as the labelling and advertising of all foods, drugs, therapeutic devices and cosmetics. Standards of safety and purity are maintained through constant and widespread inspection and laboratory research. Standards governing ingredients are formulated and methods of analysis developed in the central Food and Drugs laboratory, where special research is also carried on to establish the safety of new products. Several panels of experts advise on technical and medical problems.

Regulation of the domestic supply of narcotic drugs is maintained through a system of licensed distributors and reports of all stocks subsequently sold or dispensed. Enforcement of the provisions concerning illicit traffic is carried out in collaboration with the Royal Canadian Mounted Police.

Indian and Northern Health Services.—The Department of National Health and Welfare makes available public health, medical and hospital services to a registered population of about 180,000 Indians and 12,000 Eskimos. This program is administered by the Directorate of Indian and Northern Health Services in collaboration with the government departments responsible for the general welfare of these groups—the Department of Citizenship and Immigration for Indians and the Department of Northern Affairs and National Resources for Eskimos.

Services are provided directly to about 2,000 small scattered groups through a network of 22 hospitals, 30 clinics, 38 nursing stations and about 80 other health centres staffed by full-time medical officers, graduate nurses, and other health personnel. In areas where departmental staff or facilities are not located, private practitioners and provincial or community health agencies provide care in return for fees for service, payment of per diem rates or through other arrangements. Special emphasis is placed on communicable disease control through health education, field X-ray surveys, protective vaccinations and early treatment where required.

---

* This subject is covered in detail in a special article entitled "Federal Food and Drug Legislation in Canada' pp. 242-248.

Immigrants.—The Department of National Health and Welfare advises on the administration of sections of the Immigration Act dealing with health, and conducts in Canada and other countries the medical examination of applicants for immigration. It also provides care for immigrants who become ill en route to their destination or while awaiting employment. Further assistance in the provision of hospital and medical services is available to indigent immigrants during their first year in Canada, either from the Federal Government or from the province with federal sharing of costs.

Quarantine.—Under the Quarantine Act, all vessels, aircraft and other conveyances together with their crew members and passengers arriving in Canada from foreign countries are inspected by quarantine officers to detect and correct conditions that could lead to the entry and spread of quarantinable diseases in Canada. Fully organized quarantine stations are located at all major seaports and airports.

Under the provisions of the Leprosy Act, modern facilities for the diagnosis and treatment of leprosy are provided at Tracadie, N.B., for the small number of persons in Canada suffering from this disease.

Sick Mariners.—Under the authority of Part V of the Canada Shipping Act, the Department of National Health and Welfare provides prepaid health services for crew members of foreign-going ships arriving in Canada and Canadian coastal vessels in interprovincial trade; crew members of Canadian fishing and government vessels may participate on an elective basis. Hospital care of crew members having residence in Canada is the responsibility of the provincial hospital insurance authority concerned.

Health Research.*—Health research in Canada is carried on in universities, hospitals, research institutes and government departments. In the universities this work is done by departments of basic medical sciences, medical and public health departments and special departments or institutes of research. Hospitals used for teaching medical students also carry on considerable research as do some of the larger non-teaching hospitals and mental institutions.

The Department of National Health and Welfare, the Medical Research Council (established in November 1960 to take over the work formerly carried on by the National Research Council Medical Division), the Department of Veterans Affairs and the Defence Research Board support extensive programs of research. Other important research centres include the Connaught Medical Research Laboratories, the Banting Research Foundation, the Charles H. Best Institute, the Institute of Microbiology and Hygiene, the Allan Memorial Institute and the Montreal Neurological Institute. Over-all expenditures on health research in Canada cannot be established exactly, but may reach $7,000,000 or $8,000,000 annually.

International Health.—Canada actively assists and co-operates with the World Health Organization and other specialized agencies of the United Nations concerned with health. Capital and technical assistance are provided to under-developed countries through the Colombo Plan and other bilateral programs. Training in Canada is provided for a number of persons coming to Canada each year under the different technical co-operation schemes.

To carry out this country's obligations under the International Sanitary Conventions, the Department of National Health and Welfare maintains quarantine measures for ships and aircraft entering Canadian ports and provides accommodation and necessary medical care for persons arriving in Canada who require quarantine.

The Department is responsible for the enforcement of requirements governing the handling and shipping of shellfish under the International Shellfish Agreement between Canada and the United States and, at the request of the International Joint Commission, participates in studies connected with control of pollution of boundary waters between Canada and the United States and with problems caused by atmospheric pollution. Other international health responsibilities include the custody and distribution of biological, vitamin and hormone standards for the World Health Organization and certain duties in connection with the Commission on Narcotic Drugs of the United Nations.

---

* See also Subsection 3 of Section 4 of that Part of the Education and Research Chapter relating to Scientific and Industrial Research.

FEDERAL FOOD AND DRUG LEGISLATION IN CANADA*

The food and drug industries and trades make up the largest group of businesses in Canada when the production, manufacturing and importation of these commodities are considered along with wholesale and retail trades. Excluding the farmers involved in production but including persons employed in retail establishments, these industries provide the livelihood of more than 190,000 Canadians in more than 60,000 businesses, large and small. Canadians spend about $5,000,000,000 a year for foods and drugs. The potential hazards to health and the possibility of serious fraud and deception in the sale and use of these commodities that are so essential to existence have prompted the passing of special legislation which exercises control over their manufacture and sale.

The present Food and Drugs Act is a federal statute with provisions applying to the manufacture, advertising, packaging and sale of foods, drugs, cosmetics and medical devices anywhere in Canada. There are no similar provincial laws. This federal law exists for the protection of the consumer; it is not intended to assist the sale of products through grading, nor does it exist to protect Canadian products from competition from abroad. Imports and domestic products are treated alike by this Act.

Food and drug legislation of some kind has been known in the world for centuries—the Assize of Bread in England as long ago as 1266 and the condemnation of carcasses of tainted beef by the mayor of the City of London in 1319. The first Canadian law of general scope was "An Act to Impose Licence Duties on the Compounders of Spirits and to Prevent the Adulteration of Food, Drink and Drugs" passed by Parliament in May 1874 and became effective on Jan. 1, 1875. In this Act the present Food and Drugs Act had its origin. There have been many minor and several major amendments to the law since 1874, the most recent being passed in 1953. The original law was the first such law of national scope in the Americas. There has been continuous enforcement since 1875.

The 1953 law has very wide scope and powers. There is authority provided (1) to establish standards of composition or identity for foods, drugs and cosmetics and standards for medical devices; (2) to prohibit the sale of foods that are dirty, harmful, rotten or disgusting, adulterated or manufactured or stored under unsanitary conditions; (3) to prohibit the sale of drugs manufactured under unsanitary conditions or that are adulterated; (4) to provide standards for all drugs; (5) to require licences for certain biological preparations and antibiotics; (6) to prohibit the sale of harmful cosmetics or those made under unsanitary conditions and to set standards for cosmetics; (7) to prohibit the sale of harmful medical devices; and (8) to prohibit the advertising, labelling, packaging or processing of foods, drugs and medical devices "in a manner that is false, misleading or deceptive or is likely to create an erroneous impression regarding its character, value, quantity, composition, merit or safety". The Act has a clause that prohibits the advertising of any food, drug, cosmetic or device to the general public as a treatment, preventative or cure for a number of serious diseases and also lists drugs that may be sold only on prescription. The maximum penalty for violation of the Act is three years in prison and a $5,000 fine.

The practical enforcement of the Food and Drugs Act requires that certain sections of the Act be supplemented by regulations interpreting the meaning of the Act. Consequently, there has grown up over the years a considerable volume of regulations which provide standards, set forth requirements for labelling and establish prohibitions or exemptions for certain substances or classes of substances within the scope of the Act.

---

* Prepared by Dr. C. A. Morrell, Director, Food and Drug Directorate, Department of National Health and Welfare, Ottawa.

Thus, the Act and regulations provide a working document of specifications, which is used by the enforcement agency and which should be familiar to the trades and industries governed by them. Years of experience have established that there are very few occasions for which it does not provide adequate powers to protect the public interest in a satisfactory manner. On the other hand regulations are frequently changed. Numerous new foods and drugs are introduced to the market each year and new processing methods and packages must be considered, often requiring prompt amendments to existing standards or the establishment of new standards. Such changes can be made without much delay by Order in Council, which is a great advantage in the public interest.

Drugs

The Food and Drugs Act requires that drugs be manufactured under sanitary conditions. This requirement is applied to different classes of drugs in different ways. For example, it is to be expected that a drug made for injection into the human body should be made with somewhat greater precautions with respect to bacterial contamination than an ointment. The Act sets out in detail what is expected of biological products such as living vaccines for oral or parenteral use, parenteral antibiotics, sera, toxoids, insulin and corticotrophin.

None of this group of drugs may be made for sale in Canada unless licensed under the Food and Drugs Act and the regulations give, in detail, the requirements that must be met before a licence is granted. These include an inspection of the premises and facilities that are to be used in manufacture and an assessment of the qualifications and experience of the personnel in charge of their production. Furthermore, no new licenced product may be sold unless the first several lots are completely tested by the Department of National Health and Welfare in its laboratories. Afterwards 'spot checks' are made of the product to determine that safety and quality are being maintained.

Standards for all drugs are provided for in one or another of the following ways. (1) By regulation under the Act itself, in which case no other standard for that drug is permitted. Examples are thyroid tablets and digitalis preparations. (2) The standard is set forth in a pharmacopoeia or other standard work that is named in a schedule to the Food and Drugs Act. These compendia are the International Pharmacopoeia, the British Pharmacopoeia, the U.S. Pharmacopoeia, the French Codex, the Canadian Formulary, the British Pharmaceutical Codex and the National Formulary. (3) When a standard has not been provided for a drug in either (1) or (2) the manufacturer must set a standard of his own. This he does in fact when he labels the drug with a quantitative list of the active ingredients. In doing so he must not sell a drug that can be confused in any way with a drug which is standardized under (1) or (2).

Actually the greater number of newer drugs and products are included in the third group. The situation at present is that manufacturers find it more profitable to sell a product that is exclusively their own than to compete with one another for the market in official drugs (pharmacopoeial drugs) on a generic name basis. In all fairness, however, it should be pointed out that a manufacturer can properly believe that his pharmacopoeial drug is superior to that of a competitor, even though they are both made to meet the same official standard, and deserves to be advertised and marketed as an individual product.

Under Canada's free enterprise, capitalistic system of economy, no prohibitions prevent the drug manufacturer from adding, at will, to the number of products he offers for sale--provided they meet a known standard, are safe under conditions of use that will be employed and are properly labelled and advertised. As a result, there are estimated to be about 25,000 drug products offered for sale in Canada. This is in contrast to the limited numbers that are sold in some other countries where the government actually limits the number of brands of any one kind of product that may be sold.

This brings up for mention another important duty of the Food and Drug Directorate. No one may sell a *new* drug in Canada unless he first provides the Minister of National Health and Welfare with a description of the drug, a list of all ingredients, route of administration, dosage, a description of the pharmaceutical form, claims to be made, method of manufacture and control, the pharmacological properties, and results of clinical tests to demonstrate safety and effects. A *new* drug is not limited to new chemical substances; a product may be considered to be new because of its method of manufacture, its composition, its dosage and route of administration or because of the claims made for it. (When all factors are taken into account there were 180 *new* drugs for which manufacturers submitted the required information during 1959.)

The information submitted to the Minister is reviewed by a team of scientists and medical men in the Food and Drug Directorate. They carefully and critically review all data and information on which the manufacturer is basing his claim that he has an effective product that is safe when properly used. In addition, the manufacturers' processing methods and controls are carefully studied.

At the time a new drug is released for sale a decision has to be made as to whether it should be sold only on prescription. The Department is assisted in this action by the advice of a committee consisting of a representative of the Canadian Pharmaceutical Association and of the Canadian Medical Association together with the Director of Food and Drugs. In general, any drug that can be classed as a sedative, hypnotic or tranquillizer, goes automatically on the prescription list. This course has been followed because experience with these drugs indicates that they are frequently misused by the public. Amphetamine and its salts are also on the prescription list for the same reasons. In fact, misuse and abuse are main reasons for adding drugs to the list but other factors are considered: (*a*) the drug is new and has been shown experimentally to have undesirable side reactions; (*b*) the drug is designed exclusively for treatment of a serious disease for which self-medication is not advisable; (*c*) the drug is habit forming: and (*d*) injury from the drug is insidious and not easily recognized until far advanced. Members of the medical profession and pharmacists are advised of the prescription list so that there will be no misunderstanding on their part.

The Food and Drug Directorate also has a responsibility with respect to the quality of drugs. The qualities of drugs that are demanded by law may be listed as follows: (*a*) the drug must have the quantitative composition claimed for it in terms of active ingredients; (*b*) the medication must be contained in the pharmaceutical form in such a way that it is wholly available to the person taking it, and if special claims are made as to the rate or time of release of the medication they must be true claims; (*c*) the drug and excipient, vehicle or container in which it is held must be free from harmful extraneous substances; and (*d*) the drug must have the stability required of it. There are specific regulations covering each of these points and every year many hundreds of drugs are sampled and tested in the Food and Drug laboratories to ensure that they meet the quality requirements set forth.

The Food and Drugs Act is a part of criminal law and it lays down standards and other requirements that will minimize health hazards and fraud in the sale and use of these products. It outlines areas of responsibilities for the manufacturers and distributors but it does not guarantee that drugs will meet the quality standards expected of them. Violations of the law can be and are uncovered and remedial or punitive action taken. It is not, however, a proper function of the Food and Drug laboratories to act as a control laboratory for the pharmaceutical industry. The first responsibility for safety and potency is put squarely on the manufacturer. The ability, facilities and conscience of the manufacturer is the 'priceless' ingredient in a drug which the drug plant inspection program of the FDD attempts to measure. An experienced inspector will know a good deal about these aspects of quality in a plant after having examined procedures, records and facilities and talked to supervisory staff.

The Food and Drugs Act contains clauses and sections with respect to advertising. It is illegal to make false, exaggerated or misleading claims about a drug or to create an erroneous impression as to its composition, character, value, quantity, merit or safety. The work of enforcing this section is considerable, since the advertising of drugs is very extensive. Control of advertising is limited to that directed at the general public. Advertising to the medical or pharmaceutical professions is not interfered with although it is not excluded by the Act. It is assumed that members of these professions can take care of themselves because of their professional knowledge and experience. The public on the other hand has no such knowledge and is rather easily deceived by clever advertising copy. People are conditioned to expect anything from science and at the same time are very conscious of their health. They make a receptive audience for almost any claim that purports to be based on laboratory or clinical research.

Recent publicity linking certain dietary fats with high blood cholesterol and high cholesterol with aetherosclerosis has tempted some manufacturers of vegetable oils and their products to capitalize on the public interest in this controversy. These manufacturers have been warned that such advertising is illegal and it has been stopped temporarily, at least, in so far as advertising originating in Canada is concerned.

There is one basic difficulty in the fair and impartial enforcement of this requirement. The same prohibition does not exist in the United States, and American papers and periodicals are often read by Canadians while American TV and radio programs are available to most people in Canada. This example points up the need for international uniformity in food and drug legislation. The conflict between national laws extends beyond the field of advertising for both foods and drugs. Different standards and different labelling requirements among countries engaged in international trade present obstacles to that trade.

Some of the specific requirements in the Food and Drug regulations that apply to labels on drug packages are discussed here. The proper name (generic name, non-proprietary name) must be on the label but if there is no proper name, the common name. The proper name must be given immediately before or after the brand name and in type not less than one-half the size of the brand name. Thus the doctor is informed of the real name of the drug in the pharmaceutical form he is using. If it is a combination of drugs, the ingredients are to be listed by their proper names. There is a small committee of the World Health Organization that reviews non-proprietary names suggested for new drugs and makes recommendations for their use throughout the world.

The name and address of the manufacturer must also be on the label. It is very important for the physician to know who makes the drugs he uses since it is the ability and will of the manufacturer that counts and not the fact that he has a brand name for his product.

The regulations insist that lot numbers be given to all drugs intended for internal or parenteral use, which permits the tracing of a drug through the manufacturing processes and after distribution. It may be vital to know where a particular lot of a drug may be found if it is necessary to recall it promptly to prevent injury to users. Also, the labels of some reliable and potent drugs including several antibiotics and biological products carry an expiration date after which the drug is not recommended for use.

The Food and Drug Directorate administers another Act that is concerned with drugs. Drugs sold under the Proprietary or Patent Medicine Act are registered and their manufacturers are licensed. These medicines are household remedies and a complete list of ingredients is not carried on the label. Before registration is granted, the facts about the drug in respect to its composition and the claims to be made for it are carefully studied with the help of an advisory board consisting of two pharmacists and two physicians. All registrations are not reviewed by this board but only when there is doubt or when something new is proposed. There are many types of drugs that cannot be registered (narcotics, prescription drugs, new drugs, etc.) and the doses of other drugs are strictly limited in the interest of safety. Since provincial laws allow these registered medicines to be sold in stores other than pharmacies, review of a medicine for registration is made with the knowledge that it will be sold by those who have no professional qualifications and that it will be bought by the public for self-medication.

Vitamins

For administrative purposes vitamins stand between drugs and foods. They are natural components of many foods but at the same time several vitamins have been separated and purified or synthesized and are now dispensed in the usual pharmaceutical forms. They may be considered as either foods or drugs, depending on the claims made for them. Only the vitamins recognized as having established physiological or curative effects are listed in the regulations and the claims for these are limited by law.

In so far as vitamin-containing foods are concerned, the main problems are to discourage advertising claims that are not justifiable. Claims for their action are limited to those that have been well established by clinical studies. There are also foods to which vitamins are added either because they are normally low in vitamin content or because it is considered desirable for commercial reasons. If vitamins are to be added to foods it must be in reasonably large amounts, although an upper as well as a lower limit is set. It is understood that when claims are made for a vitamin in a food the vitamin is present in the amount stated or required by regulation.

Despite the restrictions that are put on the labelling and claims for vitamin products, there is an increasing number of foods appearing on the market with added vitamins in which the vitamins serve no purpose other than as a sales 'gimmick'. The only consolation in this situation is that people consuming these vitamins are suffering no harm to their health. In this connection a requirement of the vitamin regulations stipulates that products having more than a given level of vitamin content must be labelled "for therapeutic use only" and may not be advertised to the general public.

Foods

The Food and Drugs Act and regulations cover the foods sold in Canada from the standpoint of the prevention of health hazards and frauds. There are prohibitions on the sale of foods containing harmful or disgusting substances and against the manufacture, packaging and storage of food under unsanitary conditions. Food sold as meals in restaurants is not under the authority of the FDD, but is a provincial or municipal responsibility.

It is an offence to advertise, label or package a food in a manner that is false, misleading or deceptive or that is likely to create an erroneous impression about that food. Standards of composition or identity are set up for a number of foods and classes of foods. It is an offence to sell a food in such a way that it can be mistaken for a standardized food unless it does meet the standard in question. Requirements are laid down in the regulations for the labelling of all foods.

Consideration of the possible health hazards from foods brings to attention the two major sources of potential danger—bacterial contamination and the use of poisonous or harmful substances in or on foods for one reason or another. Another perhaps less obvious danger lies in the processing or preserving of foods in such a way that valuable (or even scarce) nutritional ingredients are lost. The Food and Drugs Act provides the authority to seize and destroy food that is found to be dangerously contaminated with bacteria or their toxins, to prosecute the manufacturer or vendor of such food and to inspect the manufacturing plants producing it.

The Food and Drug Directorate has been engaged for some time in inspection of food-processing plants with a view to forcing any manufacturers at fault to clean up their plants and produce clean wholesome foods. Warnings, advice, seizures and prosecutions are all used to improve the situation. Up to the present, it has not been a matter of applying bacteriological techniques to uncover the faults. The faults have been obvious to the eye and the first step in their elimination has been a vigorous use of broom and shovel and soap and water.

It is well known that dairy products such as cheese have been the source of typhoid epidemics and of tuberculosis. As a help in preventing such diseases, the Food and Drug regulations require that cheese either be stored for a minimum period of sixty days if it is not either pasteurized or made from pasteurized milk. There have been difficulties in stopping the sale of fresh cheese made from unpasteurized milk.

There are other problems in the health area connected with the manufacture of dairy products. Efforts of the Food and Drug Directorate, with the assistance of provincial departments, have succeeded in attaining a very marked improvement in the sanitation and housekeeping of factories but there remains the problem of unsatisfactory milk brought to these processing plants. Samples of individual farmer's milk have shown that a significant number are still supplying milk of a very low standard.

Changes in methods of marketing foods in the past fifteen years have led to an increase in the use and the number of chemical additives used in foods. The present world food supply does not appear to be adequate in amount for everyone and better ways of preserving, storing and transporting foods are needed; losses caused by insects and blight must be decreased; and 'convenience' foods are more in demand. All these factors require the use of chemical additives in the form of preservatives, antimicrobial agents, fungicides, insecticides, emulsifiers, colours, and other processing agents. While these are useful and even necessary, the safety of the foods to which they are added becomes a matter of great importance. This is the concern of the Food and Drug Directorate.

The principles on which the administrative policy is based are: (1) the use of the additive must contribute something of value to the consumer; (2) the amounts of the substance used must be well below the level at which even slight harmful effects can be observed; (3) there must be no deception or fraud as a result of the use of the substance; (4) there must be a quantitative method of determining the substance in the food; and (5) a maximum level (or tolerance) is established for the substance in or on foods which is well below the maximum safe level.

In order to put these criteria into effect, the manufacturer is required to submit all information about his product that will make possible sound decisions. This information is carefully reviewed by a team of scientists and medical men and when a tolerance is decided on the regulations are changed to permit the use of the substance in the manner proposed.

Another subject of importance is the bacteriology of frozen foods—particularly foods already cooked and requiring only warming before use. Surveys of these products have been made and a close watch is kept to prevent any seriously contaminated foods of this kind reaching the consumer. Storage temperatures during transport and at the retail level are important factors to be considered.

Much time is spent in 'policing' the market for fraudulent practices. Detection of fraud and collecting evidence that will stand up in court is a matter that requires sharpness and ingenuity of both inspectors and analysts. A typical example was the detection of the adulteration of olive oil with rapeseed oil. Because the standard for olive oil could not be specific enough to exclude some other vegetable oils, one manufacturer took advantage of the situation to add considerable quantities of rapeseed oil to his so-called pure olive oil. While standard tests aroused suspicion they were not adequate to produce legal evidence that would convict. Only when erucic acid was separated from the adulterated oil by molecular distillation was it possible to be sure. A rapid method was then developed by means of infrared spectroscopy to detect the differences between pure olive oil and adulterated olive oil. The adulteration of butter with vegetable oils has also been detected by means of the spectrophotometer and the presence of substances not found in pure butter. Many other problems are of a continuing nature, such as adulteration of meat products and failure of foods to meet the standards provided.

Cosmetics and Medical Devices

For a number of reasons the activities of the Food and Drug Directorate in the field of cosmetics are limited to assuring their safety. The advertising of cosmetics is not restricted in the same way as for foods and drugs. It is assumed that much 'puffery' is expected by the public for products intended to improve personal appearance and that they are not really deceived by it.

The basic ingredients of cosmetics have been established by long and extensive use to be safe. There are, of course, always the group of hypersensitive individuals who show allergic reactions to cosmetics. Other than in those individuals, the dangers from cosmetics appear to be in the use of hair dyes containing p-phenylene-diamine dyes. Strict warnings against contact of these preparations with the eyes are required on all labels together with instructions for carrying out patch tests. Colours used for lipsticks have received special attention but there is little likelihood and no evidence that, in the amounts these colours are ingested, they cause any harm.

Up to the present little intensive study has been made of medical devices. However, a study has been made of dental anaesthetic gas machines and some suggestions were made as to the precision and reliability of the gauges and valves used thereon. Fraudulent devices, such as the Oxydonor, recommended as a treatment for whatever ails you, have been investigated and successful prosecutions carried out in connection with their sale.

Organization

The Food and Drug Directorate consists of several divisions and has regional laboratories and district offices in various parts of Canada. The Inspection and Enforcement Services Division, the Administrative Division and the Scientific Services Division are at headquarters in Ottawa, together with a Medical Section and a Consumers Section.

The Scientific Services is a laboratory division composed of a number of sections covering a specific field of science—food chemistry, biophysics, pharmacology, physiology, pathology, microbiology, pharmaceutical chemistry and organic chemistry. Attached to the Associate Director's office is a Biometrics Section which gives statistical advice and help to all sections and divisions. The laboratory in Ottawa conducts mainly the research, investigation and development type of work and also the biological assays.

There are five regional offices and laboratories in Halifax, Montreal, Toronto, Winnipeg and Vancouver and twenty-one district offices throughout Canada. The regional laboratories are responsible for the examinations and analyses needed in daily enforcement tasks and for the inspectors at regional and district offices. Their work is co-ordinated at Ottawa.

Subsection 2.—Provincial and Local Health Services

Provincial and local health services may be grouped in several broad categories: general public health services, primarily of a preventive nature; services for specific diseases or disabilities combining prevention and treatment; services related to general medical and hospital care; and rehabilitation services for disabled persons.

General Public Health Services.—Provincial and local governments co-operate closely in providing community public health services. The autonomy of the provinces and their social, economic and geographic diversity make for some variety in legislative provisions, in financial arrangements, and in the detailed division of functions between provincial health departments and local and voluntary agencies. Each province, however, offers all or nearly all of a basic range of public health services which include environmental health, occupational health, communicable disease control, maternal and child health, dental health, nutrition, health education, and public health laboratories.

Environmental Health.—The control of factors in the physical environment which are harmful to physical health is a rapidly expanding area of public health activity. For many years, much of the essential work in this field was related to inspection duties long associated with community health sanitation, such as maintenance of pure milk, water and food supplies, supervision of plumbing and sewage disposal systems, and general sanitary conditions in public areas. Increasing industrialization, however, has imposed new responsibilities calling for new techniques in public health engineering and sanitary services. Air pollution, water pollution and radiation protection are emerging as major environmental health problems, necessitating co-ordinated effort by governments and other agencies in research and in planning effective control measures.

Occupational Health.—Services designed to prevent accidents and occupational diseases and to maintain the health of employees are the common concern of provincial health departments, labour departments, workmen's compensation boards, and industry management. Provincial agencies regulate working conditions and offer consultation and educational services to industry. All provinces have legislation (Factory Acts, Shop Acts, Mines Acts, Workmen's Compensation Acts) setting health safety standards for employment.

Communicable Disease Control.—There are separate divisions of epidemiology or communicable disease control in the six larger provinces; in the Atlantic Provinces these functions are handled by a provincial medical health officer. Local health authorities undertake case-finding and diagnostic services in co-operation with public health laboratories, carry out epidemiological investigations and often participate in tuberculosis and venereal disease control measures.

Maternal and Child Health.—Services for mothers and children are largely decentralized through local units and departments, but most provinces maintain separate divisions or employ consultants to promote better standards. Public health nurses have a prominent place in this work which may include prenatal education, provision for delivery and care of the newborn in remote areas, home visits, child health clinics and school health services.

Dental Health.—All provincial health departments have dental health divisions which administer programs, varying under local conditions, but directed almost entirely to health education and the care of children. Training of dentists and dental hygienists in public health, the operation of children's preventive and treatment clinics, and health education are being undertaken in all provinces. Water fluoridation projects, involving an over-all total of more than a million people are in operation in seven provinces.

Three provinces—Alberta, Manitoba and Nova Scotia—are setting up, in conjunction with their dental schools, special courses for dental hygienists.

In all ten provinces free clinical care is provided for children in remote rural areas by the use of mobile units. One province uses two railway-coach dental clinics to serve remote areas. A successful locally sponsored plan in which the cost of dental services for children is shared by the local community and the provincial health department is in operation in more than 70 communities in British Columbia; the sponsoring group decides whether registration for treatment may be free or on the payment of a nominal sum.

Nutrition.—Services include technical guidance, education, consultation and research. In some provinces, school lunch programs are also sponsored and dietary supplements distributed. Five provinces have special nutrition divisions; elsewhere, nutritionists serve in other divisions of the health department.

Health Education.—In most provinces experience has demonstrated the need for a professional full-time 'health educator' as a member of the public health team. Nine provinces have separate divisions or units to co-ordinate the dissemination of health information through all available media.

Public Health Laboratories.—The public health laboratory, an essential facility in the protection of community health and the control of infectious diseases, was one of the earliest provincial services developed to assist local public health departments. Work performed includes bacteriological examination of water, milk and food samples, the examination of specimens for diagnosis of communicable disease, and pathological special services. Each province maintains a central public health laboratory and most provinces have established additional branch laboratories. Recent trends in some provinces include efforts to co-ordinate public health and hospital laboratory services, special measures to bring laboratory facilities to rural areas, and devices to reduce the direct cost of clinical laboratory procedures to the individual.

Services for Specific Diseases or Disabilities.—Each province has developed special programs to deal with health problems of particular severity and prevalence, many of which are chronic or long-term in nature. The services and facilities provided are generally similar across the country.

Mental Health.—Major developments in provincial mental health programs have included the expanding and modernizing of mental hospitals, the training of various kinds of psychiatric personnel and the extension of community mental health services outside mental institutions. Assistance to patients in securing employment and in social adjustment following discharge from mental hospitals—a relatively new field of rehabilitation—is being promoted by voluntary groups and government agencies in several provinces.

With the exception of the municipally owned local institutions in Nova Scotia and hospitals in Quebec that operate under religious or lay auspices, most mental institutions are administered by provincial authorities. A great part of the cost is borne by the provincial governments, though a charge, according to ability to contribute, may be made for care in some provinces. Newfoundland and Saskatchewan provide complete free care; Manitoba assumes a minimum maintenance cost for all patients; in Nova Scotia the provincial hospital gives free care to patients requiring active treatment; and in Ontario and Prince Edward Island mental institution treatment is included in the hospital care insurance plan.

Most public mental institutions provide care and treatment for all types of mental illness; as facilities expand, it is becoming possible to segregate those under intensive treatment from those receiving long-term care. Some provinces maintain separate accommodation for certain categories of the mentally ill. For example, in British Columbia and Alberta, homes for the senile aged are an integral part of the mental institution system. Quebec has separate institutions for epileptics. Seven provinces operate schools for residential treatment and education of mentally defective persons and one of the three other provinces, New Brunswick, enacted legislation in 1958 authorizing the government to support the maintenance of mentally retarded children in approved homes. Increasing numbers of local day classes, usually sponsored by parent organizations, offer training opportunities for mentally deficient children in the community.

As the needs of patients are more fully understood and better methods of treatment develop, the daily routine of the mental patient is becoming less restrictive, as is shown by the increasing number of persons coming voluntarily for treatment. Custodial care and locked doors are giving way to open wards where patients may have unrestricted access to grounds, occupational and recreational areas.

One of the greatest changes in the past decade has been in the extension of community mental health services outside mental institutions. General hospitals have expanded their psychiatric services in both in-patient and out-patient departments. About 30 general hospitals have organized units where psychiatric treatment is provided by professional staffs. Out-patient clinics where mental illness may be treated at an early stage and guidance services given to children and parents also play an important part in the treatment of mental illness outside mental institutions. Fewer than 20 mental health clinics existed in 1948. Groups active in the subsequent large expansion include provincial health departments, municipalities or health units, mental institutions, general and allied special hospitals, school boards and voluntary organizations.

Day and night care centres, another departure from the traditional form of custodial care, developed first in Montreal a decade ago as part of the psychiatric service of two large general hospitals. Similar centres, admitting patients on a nine-to-five basis or in the evening after work, are now conducted at St. John's in Newfoundland, at Toronto and Cobourg in Ontario, and at Burnaby in British Columbia.

Cerebral Palsy.—Children suffering from cerebral palsy in most larger cities are able to attend out-patient and training centres, many of which have been organized by parent groups. A number of general and children's hospitals have also established assessment and treatment facilities for cerebral palsied children. In most communities, buses to transport children to day centres and hospital clinics are provided and operated by local service clubs or provincial crippled children societies. Attendance fees are usually nominal with financial support of the centres coming from local voluntary contributions, provincial governments and federal health grants. Training and employment programs for young adult cerebral palsied persons are also being developed in a few cities.

Tuberculosis.—Despite greatly reduced mortality from tuberculosis and evidence of some lowering in incidence, the number of cases discovered through provincial detection programs indicates that it is still a public health problem. Case-finding efforts are being focussed increasingly on selected groups particularly vulnerable through tuberculin tests as a means of detecting infected persons. The work of case-finding is supported substantially by voluntary campaigns conducted by the Canadian Tuberculosis Association.

Sanatoria treatment is free in Newfoundland, Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta, and in Ontario is included in the hospital insurance benefits which came into effect in January 1959. Even in those provinces where a charge for sanatoria care may be made, the amount collected from paying patients is a very small percentage of total costs.

The number of beds set up in sanatoria and in tuberculosis units of general hospitals declined from a peak of 18,977 in 1953 to 13,538 in 1959. This decline in bed use has resulted from such factors as a decrease in the number of admissions, detection of cases in earlier stages of the disease, and improved treatment methods by drugs and surgery. Provision has been made in several provinces to furnish drugs for home treatment. Facilities for the vocational rehabilitation of discharged patients have been developed in all provinces, and increasing numbers are being re-established in suitable employment.

Cancer.—Health departments and lay and professional groups working for the control of cancer have been concerned mainly with four aspects of the problem—diagnosis, treatment, research and public education. In the detection and treatment of cancer, specialized medicine, hospital services and an expanding public health program are closely related. There are programs operating under health departments in four provinces; an equal number have provincially supported cancer agencies or commissions. These sponsor the work of diagnosis and treatment in special clinics located usually within the larger general hospitals. Under the provincial hospital insurance plans, the benefits pertaining to in-patient care in the treatment of cancer are essentially similar in ten provinces and include such special services as diagnostic radiology, laboratory tests and radiotherapy. In at least five provinces these benefits also apply to out-patients. In others, the previous pattern of services to out-patients—that of assessing costs of treatment in relation to ability to pay—is still in effect. Comprehensive free medical programs for cancer patients, which have long operated in Saskatchewan and Alberta, continue unchanged.

Poliomyelitis.—Through agreements with the Federal Government, all provincial health departments have made Salk vaccine available for free inoculation of children and are encouraging older age groups to avail themselves of the protection of this vaccine. During 1959, the incidence of paralytic poliomyelitis rose in all provinces to its highest level since vaccination began, while the national total was the second largest in the previous ten years. By far the greatest proportion of cases occurred among unvaccinated persons. Very few who had received the prescribed number of inoculations contracted the disease.

Previously existing programs offering free standard ward hospital care to poliomyelitis patients have now become incorporated in the federal-provincial hospital insurance schemes. In the provision of restorative services through remedial surgery, physiotherapy and hydrotherapy and the aid of prosthetic appliances, both provincial departments of health and voluntary societies have a part. Post-poliomyelitic patients may receive vocational training under provincial rehabilitation schemes; boards of education operate special classes for physically handicapped children.

Venereal Disease.—Free diagnostic and treatment services are available in all provinces but the operation of government clinics is being increasingly superseded by the method of supplying free drugs to private physicians who are reimbursed for treatment of indigents on a fee-for-service basis.

Alcoholism.—Ontario, Manitoba, Alberta and British Columbia carry out research and education programs and operate centres for treatment, supported largely by public funds. Ontario, Saskatchewan and Alberta also have rehabilitation programs for alcoholic inmates of reform institutions. Recent legislation in Newfoundland and Nova Scotia authorizes the setting up of similar agencies to initiate research and education studies.

Other Diseases or Disabilities.—Services for a number of chronic disabilities, such as heart disease, arthritis, diabetes, visual and auditory impairments and paraplegia, have been developed largely by voluntary agencies, assisted by federal and provincial funds. A brief description of the programs of some of these agencies is given in Part III, which deals with national voluntary health and welfare activities.

Public Medical Care.—Public medical care programs for the general population exist in three provinces but are limited to residents of particular areas. Approximately one-half of Newfoundland's population receive physician's services at home or in hospital under the provincially administered Cottage Hospital Plan which is financed in part on a premium basis. Medical indigents not under the Plan may also receive care at provincial expense. In addition, all Newfoundland children under the age of 16 years are entitled to free medical and surgical care in hospital. In Manitoba and Saskatchewan, locally operated municipal-doctor programs cover about 30,000 and 167,000 persons, respectively. The Swift Current Health Region in Saskatchewan operates a comprehensive prepaid medical-dental care scheme for about 50,000 persons. These latter programs are subsidized to some extent by provincial health departments.

For some years, the Provinces of Nova Scotia, Ontario, Saskatchewan, Alberta and British Columbia have provided health service programs for regular social assistance recipients—persons in receipt of means-tested old age security supplements, old age assistance, blindness and disability allowances, mothers' allowances and, in some provinces, certain child welfare cases. However, Nova Scotia covers only mothers' allowance recipients and their dependants and blindness allowance recipients and, in Saskatchewan, old age assistance recipients are the responsibility of the municipality of residence.

Under the Ontario program, the major medical services offered are physician's care in the home and office, including certain minor surgical procedures and prenatal and postnatal care. Since Jan. 1, 1959, basic dental care has been available to the children of mothers' allowance recipients. In addition to these medical services, Nova Scotia provides major and minor surgical and obstetrical services and medical attendance in hospital. The programs in Saskatchewan, Alberta and British Columbia give complete medical care in the home, office and hospital, including surgical and obstetrical services, specified prescription drugs (except in Alberta, and with a dollar limitation in Saskatchewan) and dental and optical care, sometimes only on authorization and/or with dollar limits. All of these plans are completely provincially financed, except in British Columbia where costs are shared on a 90-10 basis with the municipalities assuming their share on a proportionate population basis, and in Ontario where per capita contributions toward the cost of medical services for the assistance group are shared on an 80-20 basis with the municipality of residence. In 1960, Manitoba broadened its program of provincial social assistance to include a comprehensive program of health care for cases of need among the aged and infirm including those in nursing homes or institutions, the blind and the physically or mentally disabled, mothers with custody of dependent children, and neglected children. Services provided include medical, surgical, optical and dental care, essential drugs, remedial care and treatment including physiotherapy, emergency transportation, and chiropractic treatment.

Indigent persons not covered by these programs, as well as indigents in other provinces, may receive necessary care from the municipalities of residence. In general, where costs are assumed by the municipality, there is some form of cost-sharing arrangement with the provincial government.

Rehabilitation Services.—Expansion of rehabilitation services in all provinces indicates growing success in prevention and control of many disabling conditions and broader understanding of the needs of handicapped persons. Following the earlier rehabilitation programs organized for injured workers, disabled war veterans and such groups as the blind and the tuberculous, there has been continued progress in the development of services for other disability groups and special medical, vocational, educational and social services for the handicapped. More emphasis is being given to extending comprehensive services to all handicapped regardless of disability, and to strengthening national, provincial and community bodies concerned with planning and co-ordination. The broadening scope of rehabilitation programs and the movement toward integration of the numerous specialized services are exemplified by the liaison developed between two of the large national voluntary agencies, the Canadian Council for Crippled Children and Adults, and the Canadian Foundation for Poliomyelitis and Rehabilitation, as well as by the steady growth of the official provincial rehabilitation programs and the development of co-ordinated community services for the handicapped. Concurrently there has been more attention given to improving treatment and social services for mentally ill persons, mentally retarded children, alcoholics, cerebral palsied children and other disability groups.

Rehabilitation services for persons handicapped by physical or mental defects are organized under voluntary and public auspices as part of general health, welfare or education programs, and also by specialized agencies that provide one or more rehabilitation services. In many of the larger cities, these facilities include hospital physical medicine and rehabilitation departments and special clinics for particular disabilities, separate rehabilitation centres, sheltered workshops, vocational counselling, training and job-placement agencies, and special classes, schools and other combined treatment and education centres for handicapped children. Home care services, such as nursing, physical and occupational therapy and housekeeping services, employment of the homebound and recreational services have been started by a few agencies but their coverage is generally limited.

The main elements of the nation-wide rehabilitation program, introduced in 1953, are supported by joint federal-provincial programs for the co-ordination of rehabilitation services, the vocational training of disabled persons, and the National Health Grants designated for the extension of medical rehabilitation and crippled children's services and for the rehabilitation of the mentally ill or deficient, the tuberculous and other chronically ill. Vocational assessment and counselling of the handicapped is provided by rehabilitation officers attached to the provincial rehabilitation services and by some of the other rehabilitation agencies and centres. Medical rehabilitation services are made available through the provincial public assistance medical care schemes, hospital insurance plans, public health services, the voluntary agencies and various health grant projects. The main responsibility for job placement of persons with occupational handicaps is carried by about 165 special placement officers located in the larger National Employment Service offices across the country, although some rehabilitation agencies also do placement work, especially of the severely handicapped. The Federal Government also provides direct services through the programs administered by the Department of Veterans Affairs which operates special centres for the treatment of chronically ill and aging veterans, by the Department of Citizenship and Immigration for physically and socially handicapped Indians, and by the Department of Northern Affairs and National Resources for the resettlement of disabled Eskimos.

In the year ended Mar. 31, 1960, federal-provincial expenditures, shared under the Co-ordination of Rehabilitation of Disabled Persons Agreements administered by the Department of Labour, increased to $228,268. The cost of support of 1,462 disabled persons reported as rehabilitated was $923,240 during the year prior to acceptance as compared with estimated annual earnings of $2,683,403 after placement in jobs. The total vocational training expenditures under the Special Vocational Training Projects Agreements, also a matching grant administered by the Department of Labour, increased to $566,573 for the training of 1,344 disabled persons enrolled in a wide range of vocational courses. Special placements of handicapped persons who required assistance in finding work during 1959 numbered 17,940, which was 20 p.c. more than during 1958.

Expenditures on projects under the Medical Rehabilitation Grant and Crippled Children Grant (a portion of these funds being on a matching basis) amounted to $1,176,968 of the $1,520,000 available from federal funds in the year ended Mar. 31, 1960. Through the 75 projects approved under these grants, equipment was provided for 16 hospitals and rehabilitation centres, and support was given for the extension of services by 13 rehabilitation centres, 10 hospital centres and clinics, 17 cerebral palsy training centres, five crippled children's services, and by seven of the provincial programs. Other projects supported the full-time professional training of 31 rehabilitation personnel with additional bursaries for short courses, and also the operation of four schools of physical, occupational and speech therapy.

Subsection 3.—Health Services in the Yukon and Northwest Territories

Health services in the two Territories are operated under conditions considerably different from those in the provinces. Extensive sparsely settled areas, climatic conditions, lack of local government and direct federal administration constitute a basic set of conditions under which health services for both native and white populations, outside the few settled areas, are provided by government agencies or religious organizations. The Yukon Territorial Government, the Northwest Territories Council, the Directorate of Indian and Northern Health Services of the Department of National Health and Welfare, the Department of Northern Affairs and National Resources and the Department of National Defence are all concerned with the provision of services.

Complete health services are supplied to Indians and Eskimos by Indian and Northern Health Services. Particular emphasis is given to tuberculosis, and mass X-ray programs are carried out annually. The Eastern Arctic is served by the annual Eastern Arctic Patrol as well as by medical health officers. In the Western Arctic, medical officers and nursing stations are located at strategic points and a travelling dentist is employed. Persons who cannot be cared for locally are transferred to federal hospitals in the provinces.

Hospital insurance plans in both the Yukon and Northwest Territories came into operation in 1960. In the Yukon Territory, services for the white population are administered through the Commissioner for the Yukon and include complete treatment for tuberculosis and poliomyelitis patients. Public health services include communicable disease control, public health nursing, sanitary inspection and tuberculosis case-finding.

In the Northwest Territories, health programs for the white population include treatment for tuberculosis and venereal disease as well as dental care for children under 17 years of age and hospital care for the mentally ill. Cancer diagnosis is provided through the Edmonton Clinic. Indigent residents are eligible for medical, dental and optical services as well as for general hospital care.

Section 2.—Health Statistics

Statistical information on the health of Canadians is at present limited to the well established and highly standardized mortality, communicable disease and institutional statistic series, all of which have been available for a long period. As compared with these records, other national health statistics are still in an early stage of development. So far, the only source of information on general illness, health services and personal expenditure for health care is the Canadian Sickness Survey of 1950-51. Other projects deal with specific health problems or selected groups of the population, such as Civil Service illness and the activities of the Victorian Order of Nurses. Much statistical information is also available from provincial and other health sources.

Statistics on causes of death are given in the Chapter on Vital Statistics, pp. 217-220; those on hospital statistics in Subsection 1 following; and those on notifiable diseases and illness in the Civil Service in Subsection 2. A brief outline of the scope and methods of the Sickness Survey of 1950-51 is given in the 1955 Year Book and some of the results are published in the 1955, 1956 and 1957-58 editions. Details are available in bulletin form (Catalogue Nos. 82-501 to 82-511).

Subsection 1.—Hospital Statistics*

There were 1,503 hospitals operating in Canada in 1959; their rated capacity (not including bassinets for the newborn) was 192,948 beds and cribs. One year earlier, 101 fewer institutions were operating as hospitals throughout the country, and there were 9,543 fewer beds and cribs available for patients.

Two methods of hospital classification are used in the tables of this Subsection: one based on admission policy, i.e., public, private or federal; and the other based on type of service provided, i.e., general, special, mental or tuberculosis. Both classifications are combined in Tables 1 and 2, which show the number of hospitals of each type and their bed capacities, distributed provincially. In 1959 almost two of every three institutions recognized by provincial authorities as hospitals were 'general' hospitals—hospitals either devoted primarily to the active treatment of a wide range of illnesses or having an active treatment unit. They accounted for at least two of every three hospitals in each province except Quebec (where the ratio was somewhat less than one in two) and British Columbia (where the ratio was about three in five). As might be expected, the ranking of the provinces according to population corresponds closely with their order in number of hospital beds, but not with their rank in number of hospitals. Saskatchewan has many small hospitals and, in 1959, ranked next after Ontario and Quebec in number of general hospitals available to the public. Bed capacity of public hospitals per 10,000 population was highest in Prince Edward Island, Quebec, the Prairie Provinces and the Territories (all over 100.0). Except for Newfoundland's 74.5, capacity per 10,000 population ranged between 87.2 and 94.5 in the other provinces.

---

* Prepared in the Institutions Section of the Health and Welfare Division, Dominion Bureau of Statistics. Detailed information will be found in the following DBS publications: *Hospital Statistics, Vols. I and II* (Catalogue Nos. 83-202 and 83-203); *Mental Health Statistics* (Catalogue No. 83-204) and *Financial Supplement* (No. 83-205); *Tuberculosis Statistics* (No. 83-206) and *Financial Supplement* (No. 83-207).

[1] Based on estimated population as at June 1, 1959, given at p. 165.

Although 1959 information on numbers of hospitals operating in Canada and their bed capacities was available at the time of going to press, details for that year regarding movement of patients, patient-days, hospital facilities, personnel and finances had not yet been compiled. Only Table 4 showing movement of patients and patient-days for the period 1954-58, and Table 5 showing 1958 revenues and expenditures of reporting public hospitals in the different provinces, as given in the 1960 Year Book, are repeated here; 1959 figures when available will appear in bulletin form (see footnote, p. 255).

Table 4 shows the changing pattern of hospital utilization over the 1954-58 period. The absolute number of admissions increased by 23.6 p.c. but the ratio per 100,000 population increased by 10.8 p.c. Year-by-year gains, however, proceeded at a declining rate during the five-year period because of downward trends in numbers of admissions to tuberculosis sanatoria, maternity hospitals and "other" hospitals (special hospitals not specified as to type of service). Concurrently with the 23.6 p.c. rise in admissions, patient-days increased by only 10.9 p.c., indicating a shorter average length of stay per patient in 1958 than in 1954. The number of patients in hospital at year-end per 100,000 population remained remarkably constant over the period—938 on Dec. 31, 1954 and 932 on Dec. 31, 1958. Despite the over-all ratio (in rated-capacity terms) of 16 general hospital beds to every 10 beds in mental institutions, there was a difference of less than 10 p.c. between the number of patients in reporting general hospitals (70,649) and the number in mental institutions (64,188) on Dec. 31, 1958.

[1] First admissions and readmissions. [2] Mental hospitals only; does not include psychiatric or mental units of general hospitals. [3] Tuberculosis hospitals only; does not include tuberculosis units of general hospitals. [4] Includes other types not specified.

In 1958, reporting public hospitals incurred total net expenditures of $570,900,000, the equivalent of $10.35 per patient-day, which was 99 cents more for each day of patient care than in 1957. At the same time, total income amounted to $545,400,000—$25,500,000 less than operating costs. Both income and expenditure advanced from their respective 1957 levels of $490,100,000 and $510,700,000 at approximately similar rates; as a result, "operating deficit" was $4,833,000 more at the end of 1958 than one year earlier. For "other" hospitals, costs incurred for salaries and wages amounted to 91.0 p.c. of net patient earnings; for general hospitals, to 74.5 p.c. However, since provincial government funds accounted for most of the revenue of mental institutions and tuberculosis sanatoria, such costs for the former amounted to more than seven times the value of net patient earnings, and for the latter to over 73 times the amount earned from patients. For general hospitals, total costs per patient-day were highest in British Columbia ($17.56); for tuberculosis sanatoria and "other" hospitals, in Alberta ($14.84 and $16.34, respectively); and for mental institutions, in Newfoundland ($6.71).

5.—Revenues and Expenditures of Reporting Public Hospitals, by Type of Hospital and by Province, 1958

[2] Mental hospitals only; does not include psychiatric or mental units in general hospitals.

[3] Tuberculosis hospitals only; does not include tuberculosis units in general hospitals.

Diagnoses of Patients in Mental Institutions and Tuberculosis Sanatoria.—Tables 6 and 7 summarize the most recent data available on diagnoses according to age and sex of patients on the books of mental institutions and tuberculosis sanatoria, including patients in related units located in general hospitals.

Of the 71,252 mentally ill patients on record at Dec. 31, 1958, 64.5 p.c. had been diagnosed as psychotic, 31.6 p.c. as mentally defective or otherwise affected by character, behaviour and intelligence disorders, and 2.5 p.c. as psychoneurotic. More men than women had been institutionalized for disorders of character, behaviour and intelligence, with the largest frequencies of both sexes occurring in the 10-19 age group. Similarly, more men than women (except of persons 60 years of age or over) had been diagnosed as psychotic. However, in all age groups, nearly twice as many women as men had required hospitalization for conditions diagnosed as psychoneurotic.

6.—Diagnoses of Patients on the Books of Reporting Mental Hospitals, by Age and Sex, 1958

NOTE.—Figures include patients in 78 mental hospitals and also patients in psychiatric and mental units of general hospitals.

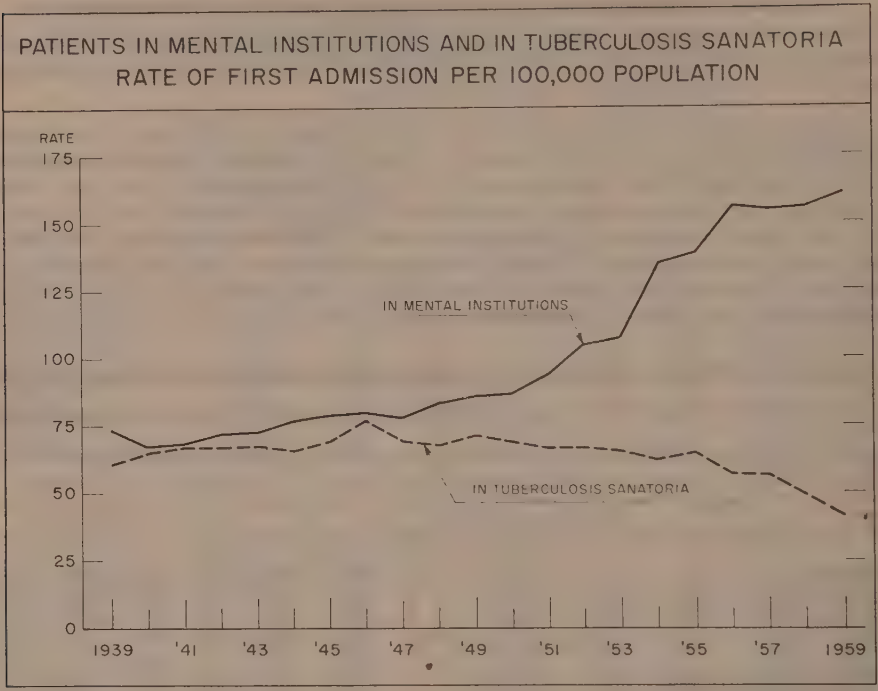
[1] Includes age groups not known.



PATIENTS IN MENTAL INSTITUTIONS AND IN TUBERCULOSIS SANATORIA
RATE OF FIRST ADMISSION PER 100,000 POPULATION

Among patients reported as on the books of tuberculosis institutions at the end of 1959, the peak frequency for men (1,301) occurred in the 60 years or over age group, and for women (671) in the 20-29 age group. More men than women were listed in each age group except those encompassing ages 10-29. Compared with 1,301 men, only 458 women aged 60 or over were carried on the books of tuberculosis sanatoria and units at Dec. 31, 1959; in contrast, the peak frequency for women aged 20-29 (671) was closely approximated in number by male patients (643).

7.—Diagnoses of Patients on the Books of Reporting Tuberculosis Hospitals, by Age and Sex, 1959

Subsection 2.—Notifiable Disease and Other Health Statistics*

Health statistics collected nationally—in addition to statistics of hospitals dealt with at pp. 255-262—cover notifiable diseases, illness among federal civil servants, and home nursing services. The first two series are dealt with briefly below; the third series is based on the experience of the Victorian Order of Nurses for Canada which is the major home nursing organization in the country. Results of the latter annual survey are available in bulletin form (Catalogue No. 82-202).

Notifiable Diseases.—The incidence of notifiable diseases during 1959 was characterized by an upsurge of poliomyelitis, scarlet fever including its related disease streptococcal sore throat, and typhoid and paratyphoid fever. During 1959 there were 1,868 cases of paralytic poliomyelitis reported as compared with a median average of 369 cases for the years 1954-58. The provinces principally affected were Quebec, Newfoundland and New Brunswick. However, the rate for Canada of 10.7 per 100,000 population did not approach the 1953 level of 28.3.

Scarlet fever and streptococcal sore throat continued its normal cyclical pattern with a significant increase during 1959. A total of 22,607 cases was reported as compared with an average of 11,118 cases for the period 1954-58. Prince Edward Island, Alberta, British Columbia, Saskatchewan and Manitoba were the principal areas of infection.

The increased number of typhoid and paratyphoid cases occurred primarily in the Province of Quebec where approximately 80 p.c. of the cases occurred.

Diseases for which significant decreases occurred during 1959 were diphtheria, amœbic dysentery, meningococcal infections and other and unspecified tuberculosis. However, the incidence of the first two diseases mentioned has been relatively insignificant in recent years.

The incidence of venereal disease in Canada remains relatively constant despite the postwar introduction of antibiotics. However, vigorous case-finding programs are undoubtedly partially responsible for maintaining the number of reported cases at an undiminished level. Although the effect of this program is making itself felt in a gradually reduced incidence of syphilis, the number of cases of gonorrhœa reported during 1959 was higher than the median average for the period from 1949 to the current year.

Table **8** shows the reported cases of certain notifiable diseases during 1959. It will be noted that, for the first time, no information is carried on such diseases as chickenpox, mumps, measles and German measles. The incidence of these diseases is not now reportable since they no longer constitute a serious health problem in Canada.

---

* Prepared in the Public Health Section of the Health and Welfare Division, Dominion Bureau of Statistics.

Illness in the Federal Civil Service.—A study of the incidence and duration of illness among federal civil servants is made annually from data supplied by medical certificates, which are required for all absences of more than three days at one time and for absence of any duration after seven days of casual leave have been taken. During the calendar year 1959, of an estimated 141,000 civil servants covered by Civil Service Leave Regulations, 50,493 reported ill by medical certificate. The number of new illnesses, as certified by medical certificate, was 75,951, somewhat higher than the 68,489 reported for 1958. Similarly, the number of days of completed illnesses increased to 1,070,084 in 1959 from the 1,039,449 reported for 1958. Other relevant statistics for 1959 indicate that, on the average, 7.8 working days were lost through illness by each employee, including 5.1 days certified and 2.7 days casual sick leave.

Several indices related to sickness absenteeism were calculated from the 1959 survey, based on the number of certified illnesses that occurred at some time during the year but not necessarily completed during the same year. These illnesses totalled 78,288. The severity rate or average number of calendar days per illness was 13.3 and the average number of working days was 9.2. The frequency rate or the average number of illnesses per 100 employees was 55.5. In addition, for each working day during the year, about two of every 100 civil servants were absent on certified sick leave.

9.—Rates per 1,000 Employees of Illnesses and Days of Illness for Federal Civil Servants, by Cause, 1959

(Certified sick leave only)

PART II.—PUBLIC WELFARE AND SOCIAL SECURITY

Responsibility for social welfare is shared by all levels of government. Costly income maintenance measures such as old age security and family allowances, or programs such as unemployment insurance and the National Employment Service where nation-wide co-ordination is required are administered federally. Substantial federal aid is given to the provinces in meeting the costs of social assistance. The Federal Government also provides services for special groups such as Indians, Eskimos and immigrants.

The Department of National Health and Welfare is the agency generally responsible for federal welfare matters; the Departments of Veterans Affairs, Citizenship and Immigration, and Northern Affairs and National Resources also operate important programs. The Unemployment Insurance Commission is responsible for the operation of unemployment insurance and the National Employment Service.

Administration of welfare services is primarily a responsibility of the province but the provision of services is often assumed by local authorities, generally with financial aid from the province.

Section 1.—Federal Government Programs

Subsection 1.—Family Allowances

The Family Allowances Act of 1944 is designed to assist in providing equal opportunity for all Canadian children. The allowances do not involve a means test and are paid entirely from the federal Consolidated Revenue Fund. They do not constitute taxable income but there is a smaller income tax exemption for children eligible for allowances.

Allowances are payable in respect of every child under the age of 16 years who was born in Canada, or who has been a resident of the country for one year, or whose father or mother was domiciled in Canada for three years immediately prior to the birth of the child. Payment is made each month, normally to the mother, although any person who substantially maintains the child may be paid the allowance on his behalf. Allowances are paid at the monthly rate of $6 for each child under 10 years of age and $8 for each child aged 10 or over but under 16 years. The allowances are paid by cheque, except for some Eskimo and Indian children in remote areas for whom payment is made largely in kind because of lack of exchange facilities and the desirability for education in the use of nutritive foods.

If the allowances are not spent for the purposes outlined in the Act, payment may be discontinued or made to some other person or agency on behalf of the child. Allowances are not payable for any child who fails to comply with provincial school regulations or on behalf of a girl who is married and under 16 years of age.

The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital. A welfare section in each regional office deals with welfare questions arising from administration of the allowances. Issuing of the cheques is the responsibility of the treasury division of each regional office, which reports to the Chief Treasury Officer of the Department of Finance attached to the Department of National Health and Welfare. The Regional Director for the Yukon and Northwest Territories is located in Ottawa.

Through the Department of Citizenship and Immigration, the Federal Government pays family assistance at the rate of $5 a month for each child under 16 years of age supported by an immigrant who has landed for permanent residence in Canada, or by a Canadian returning to Canada to reside permanently. This allowance, which is paid quarterly and for a maximum period of one year, is not payable to a child receiving family allowances.

Subsection 2.—Old Age Security

The Old Age Security Act of 1952, as amended, provides a universal pension of $55 a month, payable by the Federal Government to all persons aged 70 or over, subject to a residence qualification. To qualify for pension a person must have resided in Canada for ten years immediately preceding its commencement or, if absent during that period, must have been actually present in Canada prior to it for double any period of absence and must have resided in Canada at least one year immediately preceding commencement of pension. A 1960 amendment to the Act provides that payment of pension may be continued for any period of residence outside Canada if the pensioner has resided in Canada for at least 25 years after attaining the age of 21 or, if he has not, it may be continued for six consecutive months exclusive of the month of departure from Canada.

Until 1959, the pension was financed on a pay-as-you-go method through a 2-p.c. sales tax, a 2-p.c. tax on corporation income and, subject to a limit of $60 a year, a 2-p.c. tax on personal income. Effective Jan. 1, 1959, the tax on corporation income and from Apr. 9, 1959, the sales tax, were raised to 3 p.c.; the rate on taxable personal income was raised to 3 p.c., with a maximum of $75 for 1959. Beginning with 1960, the maximum tax on taxable personal income rose to $90 a year. Taxes are paid into the Old Age Security Fund. If they are insufficient to meet the pension payments, temporary loans or grants are made from the Consolidated Revenue Fund. The pension is paid from the Consolidated Revenue Fund and charged to the Old Age Security Fund. The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital.

Persons in receipt of old age assistance (see p. 271) who reach age 70 are automatically transferred to old age security. Others make application to the regional office.

British Columbia, Alberta and Saskatchewan make supplementary payments to those recipients of old age security who qualify under a means and residence test. In British Columbia the allowance may not exceed $24 a month, in Alberta $15 a month, and in Saskatchewan it is a minimum of $2.50 a month rising to a maximum of $10 a month. In Ontario, the provincial government shares to the extent of 80 p.c. in the first $20 a month of supplement paid by a municipality to a needy recipient of old age security. In Manitoba, the province may pay a social allowance to a recipient of old age security unable to provide the basic necessities of life. In some provinces and in Yukon Territory, recipients of the pension who are in special need may be eligible for relief.

Subsection 3.—Other Federal Government Programs

Unemployment Insurance and National Employment Service.—In 1940, by an amendment to the British North America Act, the Federal Government was given jurisdiction in the field of unemployment insurance and the Unemployment Insurance Act was passed, establishing a national system of unemployment insurance which is outlined in Chapter XVI.

The National Employment Service is operated in conjunction with the unemployment insurance scheme. It is administered through local employment and claims offices and supervised by the Department of Labour. Statistics of positions offered and placements made are given in Chapter XVI.

Prairie Farm Assistance.—The Prairie Farm Assistance Act is administered by the Department of Agriculture; a description of the legislation is given in Chapter IX.

Welfare Services for Indians and Eskimos.—The welfare of Indians and Eskimos is administered by the Department of Citizenship and Immigration and the Department of Northern Affairs and National Resources, respectively; this field is covered in the Population Chapter, pp. 170-176.

Section 2.—Federal-Provincial Programs

Subsection 1.—Old Age Assistance

The Old Age Assistance Act of 1952, as amended, provides for federal reimbursement to the provinces for assistance to persons aged 65 or over who are in need and who have resided in Canada for at least ten years or who, if absent from Canada during this period, have been present in Canada prior to the commencement of the ten-year period for double any period of absence. On reaching age 70 a pensioner is transferred to old age security. The federal contribution may not exceed 50 p.c. of $55 a month or of the assistance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of assistance payable, the maximum income allowed and other conditions of eligibility. All provinces and territories use a maximum payment of $55 a month.

For an unmarried person, total income allowed, including assistance, may not exceed $960 a year. For a married couple it may not exceed $1,620 a year or, when the spouse is blind within the meaning of the Blind Persons Act, $1,980 a year. Assistance is not paid to a person receiving an old age security pension or an allowance under the Blind Persons Act, the Disabled Persons Act, or War Veterans Allowance Act.

British Columbia, Alberta and Yukon Territory make supplementary payments to recipients of old age assistance who qualify under a means and residence test. In British Columbia the allowance may not exceed $24 a month, in Alberta $15 a month, and in the Yukon $10 a month. In Ontario, the provincial government shares to the extent of 80 p.c. in the first $20 a month of the supplement paid by a municipality to a needy recipient of old age assistance. In Manitoba, the province may pay a social advance to a recipient of old age assistance unable to provide the basic necessities of life. In some provinces and in the Yukon, recipients of old age assistance who are in special need may be eligible for relief.

[1] During fiscal year maximum raised from $40 to $55 a month. [2] During fiscal year monthly maximum raised from $40 to $46; raised to $55 in May 1958, retroactive to Nov. 1, 1957.

Subsection 2.—Allowances for Blind Persons

The Blind Persons Act of 1952, as amended, provides for federal reimbursement to the provinces for allowances to blind persons aged 18 or over who are in need and who have resided in Canada for at least ten years. The federal contribution may not exceed 75 p.c. of $55 a month or of the allowance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of allowance payable and the maximum income allowed. All provinces use a maximum payment of $55 a month.

To qualify for an allowance a person must meet the required definition of blindness and have resided in Canada for ten years immediately preceding commencement of allowance or, if absent from Canada during this period, must have been present in Canada prior to its commencement for a period equal to double any period of absence.

For an unmarried person, total income including the allowance may not exceed $1,200 a year; for a person with no spouse but with one or more dependent children, $1,680; for a married couple, $1,980. When the spouse is also blind, income of the couple may not exceed $2,100. Allowances are not payable to a person receiving assistance under the Old Age Assistance Act, an allowance under the Disabled Persons Act or the War Veterans Allowance Act, a pension under the Old Age Security Act or a pension for blindness under the Pensions Act.

British Columbia, Alberta, Saskatchewan and Yukon Territory make supplementary payments to recipients of blindness allowances who qualify under income and residence tests. In British Columbia a flat rate allowance of $24 a month is payable, in Alberta the supplement may not exceed $15 a month, and in the Yukon $10 a month. In Saskatchewan, a minimum of $2.50 a month is payable, rising to $10 a month. In Ontario, the government shares to the extent of 80 p.c. in the first $20 a month paid by a municipality to a needy recipient. In Manitoba, the province may pay a social allowance to a recipient of a blindness allowance unable to provide the basic necessities of life.

[1] During fiscal year maximum assistance was raised from $40 to $55 a month.

[2] During fiscal year maximum raised from $40 to $46 a month; raised to $55 a month in May 1958, retroactive to Nov. 1, 1957.

Subsection 3.—Allowances for Disabled Persons

The Disabled Persons Act of 1954, as amended, provides for federal reimbursement to the provinces for allowances paid to permanently and totally disabled persons aged 18 or over who are in need and who have resided in Canada for at least ten years immediately preceding commencement of allowance or, if absent from Canada during this period, have been present in Canada prior to its commencement for a period equal to double any period of absence. To qualify for an allowance a person must meet the definition of permanent and total disability set out in the Regulations to the Act which requires that a person must be suffering from a major physiological, anatomical or psychological impairment, verified by objective medical findings; the impairment must be one that is likely to continue indefinitely without substantial improvement and that will severely limit activities of normal living. The federal contribution may not exceed 50 p.c. of $55 a month or of the allowance paid, whichever is less. All provinces and territories use a maximum payment of $55 a month. The province administers the program and, within the limits of the federal Act, may fix the amount of allowance payable, the maximum income allowed and other conditions of eligibility.

For an unmarried person, total income including the allowance may not exceed $960 a year. For a married couple the limit is $1,620 a year except that if the spouse is blind within the meaning of the Blind Persons Act, income of the couple may not exceed $1,980 a year. Allowances are not paid to a person receiving an allowance under the Blind Persons Act or the War Veterans Allowance Act, assistance under the Old Age Assistance Act, a pension under the Old Age Security Act, or a mother's allowance.

The allowance is not payable to a patient in a mental institution or tuberculosis sanatorium. A recipient who is resident in a nursing home, an infirmary, a home for the aged, an institution for the care of incurables or a private, charitable or public institution is eligible for the allowance only if the major part of the cost of his accommodation is being paid by himself or any other individual. When a recipient is required to enter a public or private hospital, the allowance may be paid for no more than two months of hospitalization in a calendar year, excluding months of admission and release, but for the period that a recipient is in hospital for therapeutic treatment for his disability or rehabilitation, as approved by the provincial authority, the allowance may continue to be paid. The provincial authority must suspend the payment of the allowance when in its opinion the recipient unreasonably neglects or refuses to comply with or to avail himself of training, rehabilitation or treatment facilities provided by or available in the province.

In the fifth year of the program, disabilities in the two medical classes—mental, psychoneurotic and personality disorders, and diseases of the nervous system and sense organs—were again found to be most prevalent among those persons becoming eligible for an allowance. These classes accounted for 53.9 p.c. of the new cases, an increase over the 47.5 p.c. in the year ended Mar. 31, 1959. Neoplasms and diseases of the respiratory system also increased slightly over the previous year. Other classes, however, such as diseases of the circulatory system, diseases of the bones and organs of movement, and infective and parasitic disease, continued to decline. Mental deficiency, the most frequently occurring disability, rose from one-fifth to nearly one-quarter of all cases granted an allowance.

British Columbia pays a flat rate supplement of $24 a month to recipients of disability allowances who qualify under a residence test. In Ontario, the government shares to the extent of 80 p.c. in the first $20 a month paid by a municipality to a needy recipient. In Manitoba, the province may pay a social allowance to a recipient of a disability allowance unable to provide the basic necessities of life. In some provinces and in Yukon Territory, recipients in special need may also be eligible for relief.

[1] During fiscal year maximum payment increased from $40 to $55 a month. [2] Excluding Yukon Territory.

Subsection 4.—Unemployment Assistance

Under the Unemployment Assistance Act of 1956 as amended in 1957, the Federal Government may share with a province and its municipalities 50 p.c. of the cost of financial assistance to unemployed persons. No distinction is made in the legislation between the employable and the unemployable.

Reimbursement is made to the province for payments within the existing provincial framework of general assistance. The scale and conditions of relief payments to recipients continue to be determined by the provinces and municipalities, except that the province agrees not to make length of residence a condition for the receipt of assistance when an applicant comes from another province which has signed a similar agreement.

The Act provides for federal sharing of provincial and municipal payments for persons in certain types of homes for special care, including homes for the aged and nursing homes. It excludes federal reimbursement for payments for persons receiving mothers' allowances. Those receiving various types of social security payments under other programs are also excluded but the Federal Government shares with the provinces any additional relief payments, other than cost-of-living bonuses or across-the-board pension supplements, made to such persons who are unemployed and in need. Health care and administration costs are also excluded from Federal Government reimbursement.

All parts of Canada have been participating in this program since the beginning of 1959. Agreements for the payment of federal assistance, effective July 1, 1955, were made with five provinces—Newfoundland, Prince Edward Island, Manitoba, Saskatchewan and British Columbia. New Brunswick and Ontario entered the scheme, effective Jan. 1, 1956 and Dec. 1, 1956, respectively; and Nova Scotia and Alberta, effective Jan. 1, 1958. At the end of 1958 the Northwest Territories signed an agreement effective Jan. 1 of that year and in 1959 Quebec and Yukon Territory entered into agreements effective July 1, 1958 and Jan. 1, 1959, respectively.

[1] Agreement effective Jan. 1, 1958.

[2] Agreement effective July 1, 1958. Payments represent 80 p.c. of the amount claimed pending completion of the audits, and a deduction of 1,500 persons has been made for the number of persons assisted.

[3] Agreement effective Jan. 1, 1959.

Section 3.—Provincial Programs

Subsection 1.—Mothers' Allowances

All provinces make provision for allowances to needy mothers who are deprived of the breadwinner and are unable to maintain their dependent children without assistance. These programs have undergone a number of changes in recent years. Eligibility requirements have been extended and liberalized. A number of provinces are combining mothers' allowances in a broadened program of provincial allowances to several categories of persons with long-term need. There is a tendency to incorporate this legislation with general asistance within a single Act, while continuing separate administration. In British Columbia, on the other hand, aid to needy mothers is provided under the general assistance program and in the same way as to other needy persons.

Subject to conditions of eligibility which vary from province to province, mothers' allowances are payable from provincial funds to applicants who are widowed or whose husbands are mentally incapacitated and, except in Alberta, to those whose husbands are physically disabled and unable to support their families. They are also payable to deserted wives who meet specified conditions; in several provinces to mothers whose husbands are in penal institutions, or who are divorced or legally separated; in some, to unmarried mothers; and in Ontario, Quebec and Nova Scotia to Indian mothers. Foster mothers may be eligible under particular circumstances in most provinces.

The number of families and children assisted and amounts of benefits paid as at Mar. 31, 1959 and 1960 are given in Table **8** and rates of benefit as at July 1960 in Table **9**.

The age limit for children is 16 years in most provinces with provision made to extend payment for a specified period if the child is attending school or if he is physically or mentally handicapped. In all provinces applicants must satisfy conditions of need and residence but the amount of outside income and resources allowed and the length of residence required prior to application vary, the most common period being one year, although in one province it is five years. Two provinces have citizenship requirements.

In each province the relevant legislation is administered by public welfare authorities. In some provinces a Mothers' Allowances Board or Commission makes the final decision regarding eligibility and the amount of allowances granted, or acts in an advisory capacity.

8.—Mothers' Allowances, by Province, as at Mar. 31, 1959 and 1960

9.—Maximum Monthly Rates under Provincial Mothers' Allowances Programs, July 1960

Province	Mother and One Child	Each Additional Child	Disabled Father at Home	Family Maximum	Supplementary
Nfld......	Food: $35 or $37 depending on age of child. Clothing: $5 for each person. Rent: up to $20 monthly in rural and to $30 monthly in urban areas. Fuel: up to $10.	Food: $10 for each child under age 16: $12 for each child age 16 or over. Clothing: $5.	$20	None set.	In special circumstances up to $30 a month additional if necessary for proper support of family.
P.E.I......	$45	$5	No additional allowance granted.	$75	None granted.
N.S.......	No set maximum; rates are based on average family income for community in which family lives. $40	$5	Included in budget on which allowance is based.	$90	None granted.
N.B.......	$35	$10	No additional allowance granted.	$90	Director may grant an additional $10 for rent if circumstances require it, but only if allowance paid is below maximum.
Que.......	$60	$10	$10	None set (minimum granted $5).	A supplementary allowance of $5 may be paid to a beneficiary incapable of working. Where need exists a special monthly allowance may be paid under the Quebec Public Charities Act through the municipality or a social agency. The cost is met in large part by the province, with some contribution by the municipality.

Ont.......	$120 for mother or father and one child. $30 for one child living with foster mother.	$16 for 2nd child $14 for 3rd child $12 for 4th child $10 for 5th child $8 for 6th child. $25 for 2nd foster child $15 for each additional foster child.	Included in budget on which allowance is based.	$180	An increase in food allowance may be granted on medical recommendation. A fuel allowance of up to $24 a month may be granted from Sept. 1 to Mar. 31. An increase of 20 p.c. in fuel allowance may be granted under special circumstances.
Man.......	Food, Clothing and Personal Needs: $52–$64 depending on age of child. Shelter: rent to $55, or taxes, insurance and minor repairs up to $20, principal and interest on mortgage or agreement for sale up to $55 less taxes. Utilities: up to $7.	$14 for child up to 3 years $16 for child 4–6 years $21 for child 7–11 years $26 for child 12–18 years (subject to deductions for 4th and each additional child).	$25	None set.	$10 for rent if necessary. Housekeeper service as required. Fuel allowance for eight months. For special needs not covered by basic schedule items, up to $150 a year.
Sask......	$60 $35 for one child living with a guardian.	$10 $20 for each child living with guardian.	$20 Also if confined to a nursing home or sanatorium.	$150 $170 if disabled father at home, in nursing home or sanatorium.	The local municipality may grant supplementary aid under the Social Assistance program. In unorganized territories the province assumes full cost.
Alta.......	$70	$20 for 2nd and 3rd child $15 for 4th to 6th child $10 for 7th to 9th child.	Not applicable.	$185	Municipalities of residence may grant additional aid, 80 p.c. of the cost of which is reimbursed by the province; in unorganized territories the province assumes full cost.
B.C.......	Allowances to needy mothers provided with other types of allowance under the Social Assistance Act, and not separable.		...	...	...

Subsection 2.—Provincial and Local Welfare Services

General assistance or relief and the various welfare services associated with this form of aid, as well as the care of the aged and the protection and care of neglected and dependent children, are governed by provincial welfare legislation. Administrative and financial responsibility is shared by the province and its municipalities. Provincial administration of welfare, as of other provincial assistance, is carried out through the department of public welfare or of health and welfare in each province. Several provincial welfare departments have established regional offices for administrative purposes and to provide consultative services to the municipalities.

Significant changes have taken place in provincial programs in the past few years. New or revised legislation or new procedures in a number of provinces have laid the foundation for improved standards of service and administration, and re-appraisal of services is continuing.

Notable program changes in the field of general assistance or residual aid have been accompanied in several provinces by redistribution of costs between the province and the municipalities, and progress has been made in setting up minimum standards of administration and encouraging uniform rates of assistance throughout the province. The financial contribution of the Federal Government to the provinces for unemployment assistance (see p. 276) has doubtless been an important contributing factor in the re-alignment of provincial-municipal responsibilities.

All provinces are giving some consideration to the need for integrated planning on behalf of older citizens. A number have increased their capital or maintenance grants to municipalities and to voluntary groups for homes for the aged and are also assisting in the construction of low-rental housing projects.

The main efforts in child welfare have been directed toward improvement of standards and greater flexibility of services, with particular emphasis on preventive casework services for children in their own homes, development of specialized children's institutions and the finding of adoption homes for all children in need of them.

An impressive number of voluntary agencies also contribute to community welfare including the welfare of families and children and of groups with special needs, such as the aged, recent immigrants, youth groups, and released prisoners. Family welfare agencies or combined family and child welfare agencies in urban centres, for example, offer casework services to families in need of counselling on such problems as marital relations, parent-child relations and family budgeting. Counselling and recreational services for older or retired people are being developed by many agencies and child and youth organizations with recreational and character-building programs offer group participation in physical education, camping, the development of special skills and other opportunities for healthful activity. Welfare councils and community planning councils contribute to the planning and co-ordinating of local welfare services.

Local voluntary agencies and institutions are usually incorporated under provincial law. They may receive public grants, depending on the nature and standard of the services they render, although, with the exception of the semi-public children's aid societies, their main support may be from united funds or community chests, or from sponsoring organizations.

Welfare services, public and private, are hampered by the continued shortage of qualified social workers. Short university courses in social work, periodic study institutes, and a more formal approach than in the past to in-service training are being developed to improve staff qualifications. A number of provincial departments are granting education leave with pay or bursaries to enable selected staff to attend schools of social work.

General Assistance.—All provinces make legislative provision for general assistance on a means-test basis to needy persons and their dependants who cannot qualify for other forms of aid, and some provinces include those whose benefits under other programs are not adequate. This assistance, with some exceptions, is administered by the municipality with substantial financial support from the province. In most provinces assistance is given for food, clothing, shelter and utilities, but it may also include incapacitation or rehabilitation allowances, post-sanatorium allowances, maintenance costs of boarding or nursing-home care, counselling and homemaking services.

The provincial departments of public welfare have regulatory powers over municipal administration of general assistance. Several provinces recommend rates of assistance as a guide to municipalities, and some specify rates at which payments must be paid if a municipality is to qualify for provincial reimbursement. Specified standards of administration may also be a requirement. The province may take the responsibility for aid in unorganized areas and for the cost of aid to certain categories of persons, such as transients. With the introduction of reimbursement plans designed to equalize municipal responsibility, British Columbia and Saskatchewan abolished municipal residence requirements. In 1960, Quebec also abolished municipal residence requirements with the reorganization of the assistance program. In other provinces, the residence of the applicant, as defined by statute, determines the financially responsible authority. Under the Unemployment Assistance Act, all provinces have agreed that residence shall not be a condition of assistance for applicants who come from other provinces. For persons without the required length of residence (usually one year) in a province, aid may be given by the province or the municipality, for which a chargeback may or may not be made to the municipality of residence.

Various financial arrangements are in effect for sharing the costs of general assistance between the province and the municipality. In Newfoundland, such assistance is the responsibility of the province and is administered by the Department of Public Welfare. In Prince Edward Island, the Department of Welfare and Labour provides direct social assistance in rural areas and assumes 75 p.c. of the cost of assistance granted by the City of Charlottetown and the incorporated towns and villages. The Department also operates a province-wide program of financial aid to families where the breadwinner is suffering from tuberculosis and is unable to support the family. In Nova Scotia, social assistance is administered by the municipality, which receives reimbursement from the Department of Public Welfare for two-thirds of the cost of assistance given and one-half of the cost of administration.

In New Brunswick, the administration of assistance to needy persons was completely reorganized under the Social Assistance Act, 1960. This Act enables the province for the first time to share with the municipalities the costs of the general assistance program. The province reimburses each municipality to the extent of one dollar per capita of the population plus 70 p.c. of expenditures in excess of that amount, and also pays 50 p.c. of the cost of administration.

In Quebec, the program of general assistance was revised through an amendment to the Quebec Public Charities Act, effective Jan. 1, 1960. The province reimburses municipal departments or authorized agencies for the full cost of aid to persons in their own homes and administers aid to persons who are unfit for work for at least 12 months. The cost of aid to unemployable persons in homes for special care, including nursing homes, is borne two-thirds by the province and one-third by the institution.

In Ontario, the Department of Public Welfare reimburses municipalities, up to a prescribed maximum, for 80 p.c. of their expenditures on aid to needy persons and on incapacitation allowances for single needy handicapped residents.

The Social Allowance Act of Manitoba, passed in 1959, transferred from the municipalities to the province responsibility for administering and financing aid to mentally or physically incapacitated persons whose disability is likely to last more than 90 days, and to persons unable to work because of their age. Aid to other needy persons, termed 'indigent relief', remains under the municipalities. The Department of Health and Public Welfare reimburses the municipalities to the extent of 40 p.c. of the costs, or at a higher rate if costs exceed a specified amount. In Saskatchewan, through the Department of Social Welfare and Rehabilitation, the province bears approximately 93 p.c. of the cost of assistance granted by the municipalities to needy persons. The municipalities are assessed annually on a per capita basis for about 7 p.c. of the over-all cost of social aid, and the province reimburses each municipality for all actual expenditures. In Alberta, the province reimburses the municipalities for 80 p.c. of the value of the assistance given. The Department of Public Welfare maintains two hostels and one welfare centre to care for unemployable single homeless men without municipal domicile.

The Province of British Columbia, through the Department of Social Welfare, reimburses the municipalities on a pooled basis for 90 p.c. of the total cost of social assistance to needy persons. Also, the province shares equally with the municipalities expenditures on salaries of social workers; a municipality with fewer than 15,000 persons may arrange to have the Department undertake social work within the municipality and reimburse the Department at the rate of 30 cents per capita per year.

Care of the Aged.—Homes for the aged under provincial, municipal or voluntary auspices are provided for the aged and infirm in all provinces. Voluntary homes generally are provincially inspected in accordance with prescribed standards and in some provinces must be licensed. Most provinces contribute to the maintenance of elderly persons in homes for the aged, either through general assistance or through statutes which relate particularly to these homes. Also, as previously indicated, 50 p.c. of the payments on behalf of assistance cases in homes for the aged and infirm (homes for special care) are met by the Federal Government.

Several provinces make capital grants toward the construction of homes, and in four provinces capital grants are also available to municipalities, voluntary organizations, or limited-dividend companies for the construction of low-rental housing.

Newfoundland maintains a Home for the Aged and Infirm at St. John's and also pays, in whole or in part, the cost of maintaining needy old people in homes for the aged and boarding homes. In 1955, a grant of 20 p.c. of costs, to be paid over a ten-year period, was made to a religious organization for the construction of a home, and provision is made for grants to similar projects under other auspices. The province is authorized by the Senior Citizens (Housing) Act, 1960 to guarantee the repayment of loans made under the National Housing Act to limited-dividend companies constructing hostels or housing for the elderly. Payment of the cost of operating hostels or housing projects may also be guaranteed. The aged and infirm in Prince Edward Island are cared for in two institutions operated by the Department of Welfare and Labour. In Nova Scotia, the aged are cared for in municipal or county homes, in homes operated by religious or private organizations and in private boarding homes. The province reimburses the municipalities for two-thirds of their expenditures for the maintenance of needy persons in municipal homes, subject to compliance with specified standards of care and accommodation. Homes for the aged receiving aid from the provincial government are subject to provincial inspection. Homes for the aged in New Brunswick are operated under municipal, religious, fraternal and private auspices, and receive no direct financial support from the province. Voluntary and proprietary homes are subject to provincial licensing and inspection and must meet standards contained in regulations under the Health Act. Under the Social Assistance Act, 1960, the province for the first time contributes to the maintenance of needy persons in municipal homes.

Institutional care for indigent old people in Quebec is provided through charitable institutions under the Public Charities Act. The Homes for the Aged Act authorizes the province to erect and maintain homes for the aged and housing projects, or to make grants to voluntary organizations for this purpose. Standards in homes are governed by regulations under the Public Health Act.

Under the Ontario Homes for the Aged Act, municipalities must provide institutional or boarding-home care for the aged. The province contributes 50 p.c. of the costs of constructing approved homes and 70 p.c. of their net operating and maintenance costs.

It also pays up to 70 p.c. of the costs of maintenance in approved boarding homes. Homes for the aged under voluntary auspices are approved, inspected and assisted under the Charitable Institutions Act, which provides for grants in aid of construction equalling 50 p.c. of costs up to $2,500 per bed and maintenance grants of 75 p.c. of the amount spent by the organization up to $3.40 per day for each resident. The Elderly Persons Housing Aid Act provides for grants to limited-dividend housing corporations building low-rental housing for elderly persons.

Institutions and boarding homes for the aged and infirm in Manitoba are supervised and licensed by the Department of Health and Public Welfare under public health legislation. Under the Elderly Persons Housing Act, the province makes construction grants to municipalities and charitable organizations, equalling one-third of the costs of constructing or acquiring and renovating housing accommodation and homes for the aged. Grants may not exceed $1,400 and $1,667 for one-person and two-person housing units, respectively; $1,200 per bed for new homes for the aged; and $700 per bed for homes that have been renovated. Under the Social Allowances Act, 1959, the entire cost of assistance to those who, because of age or incapacity, require care by another or in a home for the aged for more than 90 days is borne by the province.

Aged and infirm persons in Saskatchewan are cared for in four provincial nursing homes and in voluntary homes for the aged. The latter are inspected and licensed under the Housing Act. This Act also empowers the province and municipalities to subscribe to the stock of limited-dividend housing companies building low-rental accommodation for older persons; the province may also make loans to municipalities to assist them in subscribing. Capital grants amounting to 20 p.c. of construction costs and maintenance grants equalling $40 per bed per year may be made to municipalities, churches or charitable organizations sponsoring approved homes or housing projects. Costs of maintaining needy persons in homes for the aged are shared by the province and the municipalities under the Social Assistance Act.

Under what are termed 'master agreements', the Province of Alberta bears the cost of constructing and equipping homes for the aged and housing units on municipal land. Projects are operated by provincially incorporated foundations which include municipal councilmen in their membership; net costs of operation are borne by the municipalities. The province also meets up to 80 p.c. of the cost incurred by municipalities for the maintenance of elderly persons in housing projects and municipal or private homes. Private homes are municipally licensed.

British Columbia operates the Provincial Home for Elderly Homeless Men, the Provincial Infirmary for the chronically ill and, for senile and psychotic patients, three provincial homes for the aged. It also licenses and supervises homes for the aged and boarding homes and, where necessary, shares with the municipalities on a 90-10 basis the cost of maintaining needy residents. Under the Elderly Persons Housing Aid Act, the province makes grants amounting to one-third of construction costs to municipalities and non-profit corporations, including religious and service organizations, engaged in building homes or low-rental housing units for elderly citizens.

Child Care and Protection.—Child welfare services, which include child protection and care, services for unmarried parents, and adoption services, are provided in all provinces under provincial legislation and are administered by some central authority, usually a division of child welfare within the department of welfare. Except in Quebec, where the province does not administer services directly, the program may be administered by the provincial authority itself or the responsibility may be delegated under provincial child welfare Acts to local children's aid societies, that is, to voluntary agencies with boards of directors, operating under charter and under the general supervision of provincial departments. In Quebec, child welfare services are administered by recognized voluntary agencies and institutions, religious and secular. In Newfoundland, Prince Edward Island, Saskatchewan and to a large extent in Alberta, they are administered by the province; in the larger urban centres of Alberta there is some delegation of authority to the municipality. In Ontario and New Brunswick, a network of local children's aid societies, operating under statutory authority, is responsible for the services. In Nova Scotia, Manitoba and British Columbia, services are administered by local children's aid societies in the heavily populated areas and by the province in other areas.

Children's aid societies and the recognized agencies in Quebec receive substantial provincial grants and sometimes municipal grants and in many areas they also receive support from private subscriptions or from community chests or united funds. Maintenance costs for children in care of a voluntary or public agency may be borne entirely by the province—as in Alberta, Manitoba, Prince Edward Island and Newfoundland—or partly by the municipality of residence and partly by the province.

The child welfare agencies, whether provincial offices or authorized private agencies, have the authority to investigate cases of alleged neglect and, if necessary, to apprehend a child and to bring the case before a judge upon whom rests the responsibility of deciding whether in fact the child is neglected. When neglect is proved, the court may direct that the child be returned to his parent or parents, under supervision, or be made a ward of the province or a children's aid society or, in Quebec, be placed under the authority of a suitable person or agency. The appropriate agency is then responsible for making arrangements to meet the needs of the child in so far as community resources permit. The services may involve casework with families in their own homes, or care may be provided in foster boarding homes, in adoption homes or, for children who need this form of care, in selected institutions. Children placed for adoption may be wards or they may be placed on the written consent of the parent. Special efforts, which are meeting with considerable success, are being made to find suitable homes for children found difficult to place for adoption because of age, disability or ethnic differences. Adoptions, including those arranged privately, number about 11,000 annually.

Child welfare agencies make use of the small selective institution for placement of children who are forced to be away from their own homes for a short period or who may need preparation for placement in foster homes, and also for teen-age children who may find it easier to fit into a group setting than into a foster home. A growing number of institutions are meeting this demand for special care by a reduction in size or reorganization into small units and by the introduction of training courses for staff and other measures for the improvement of standards. The development of small, highly specialized institutions, which function as treatment centres for emotionally disturbed children, has been of particular significance in recent years.

Institutions for children are governed by provincial child welfare legislation or by special statutes dealing with welfare institutions, and by provincial or municipal public health regulations. The institutions are generally subject to inspection and in some provinces to licensing, and are usually required to make reports to the province on the movement of children under their care. Sources of income may include private subscription, provincial grants, and maintenance payments on behalf of children in care, payable by the parents, the placing agency, or the responsible municipal or provincial department.

Services to unmarried parents include casework services to the mother and possibly to the father, legal assistance in obtaining support for the child from the father, and foster-home care or adoption services for the child. If necessary, support for unmarried mothers may be obtained under general assistance programs. In many centres, homes for unmarried mothers are operated under private or religious auspices.

Except in Ontario, day nurseries for the children of working mothers have been established only in the larger centres; these are under voluntary auspices and in four provinces subject to licensing. In Ontario, where municipal day nurseries have been established in most of the industrial centres, a Day Nurseries Act sets out standards for operation and licensing to be met by all agencies offering day-care services. It also provides for reimbursement of one-half of the operating and maintenance costs of municipal day nurseries.

Subsection 3.—Workmen's Compensation

In all ten provinces, legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment or by a specified industrial disease. A summary of provincial workmen's compensation legislation is given in Chapter XVI.

PART III.—NATIONAL VOLUNTARY HEALTH AND WELFARE ACTIVITIES

A number of national voluntary agencies carry on important work in the provision of health and welfare services, planning research and education. These agencies, some of which are described below, supplement the services of the federal and provincial authorities in many fields and play a leading role in stimulating public awareness of health and welfare needs and in promoting action to meet them.

The Canadian Welfare Council.—The Council, established in 1920, is a national voluntary association of organizations and individual citizens whose aim is to further the advancement of social welfare in Canada. Member organizations include community funds and councils, other private social agencies, various federal, provincial and municipal departments, and citizen groups and individuals active in the fields of health, welfare and recreation. It furnishes authoritative information, technical consultation and field service in the main areas of social welfare and provides a means of co-operative planning and action by public and private agencies.

The policies and programs of the Council are determined by its members under the leadership of a nationally representative board of governors. Aided by professional staff, the members work together through Divisions of Family and Child Welfare, Public Welfare, Corrections, and Recreation and Community Funds and Councils, and through special committees on such subjects as social security welfare of immigrants and the aging. Departments of the Council include the Information and Research Branches and French Speaking Services. The Council publishes periodicals entitled *Canadian Welfare* and *Bien-Être Social Canadien*, and the Canadian Journal of Corrections, a directory of Canadian welfare services, pamphlets, and division bulletins.

The Canadian Diabetic Association.—Formed in 1953 with headquarters in Toronto, the Association has 22 branches in various parts of the country and a French-language affiliate, Association du Diabète, in Quebec. The aims of the organization are to promote public education regarding diabetes, to detect unrecognized cases, to teach diabetics self-care and to conduct research. The branches support various services such as free diet counselling, summer camps for diabetic children and adults, and hold 'model schools' or institutes from time to time in many cities.

The Canadian Red Cross Society.—Established in 1896 in Canada, the Society is affiliated with the International Red Cross and has branches in all ten provinces with a national headquarters in Toronto. Its objectives, defined in its Charter, are "...in time of peace or war to carry on and assist in work for the improvement of health, the prevention of disease and the mitigation of suffering throughout the world". Red Cross Society activities are very broad, ranging from national and international disaster relief services to the support of local projects. One of the major activities in Canada is the operation of a national blood transfusion service, which includes collecting and supplying free of charge, for hospital use, blood provided by voluntary donors. The Society also maintains outpost hospitals, nursing stations and emergency units in several provinces and provides an arts and crafts program and other welfare services in veterans hospitals. The Junior

Red Cross promotes health education through its schoolroom branches across Canada; it supports a special fund to supply treatment to indigent handicapped children in Canada and a fund to promote understanding among school children of different countries.

The Canadian Foundation for Poliomyelitis and Rehabilitation.—The Foundation was formed in 1948 to assist poliomyelitis victims but in 1958, because of the protection afforded by the Salk vaccine, it broadened its scope to initiate projects for the rehabilitation of persons disabled by other diseases. Through the chapters organized in ten provinces the expanded program, financed mainly by the March of Dimes, supports treatment facilities in hospitals and rehabilitation centres and provides direct services to disabled persons in need of treatment, training, and other personal aid. Other aims of the Foundation are to carry out public education and research concerning disabling conditions and to assist in the training of professional personnel. Recent projects have included the organization of anti-polio vaccination clinics, transport of iron lungs and the formation of iron lung pools, and case-finding surveys in various provinces. The national office is in Montreal.

Victorian Order of Nurses.—Since its inception in 1897, the Victorian Order of Nurses has provided a professional home nursing and health counselling service to patients with any type of illness and regardless of their financial status. In all provinces except Prince Edward Island, the association's nurses carry out bedside nursing, prenatal, post-natal and newborn care under medical direction with emphasis upon chronic conditions. In some provinces they also assist provincial health authorities in tuberculosis and venereal disease programs and conduct child health clinics. In 1960 the Order employed 654 nurses in 119 branches whose services are available to over one-third of Canada's population. The national office is in Ottawa.

The Canadian National Institute for the Blind.—Since 1918 the Canadian National Institute for the Blind has been the only national agency providing a complete social welfare service to the blind and prevention services to the visually impaired. The national office, located in Toronto, supports the seven regional divisions covering all provinces and the 48 local branches serving 23,802 registered blind persons and 76,575 prevention cases in 1960. Through its Eye Services, free to those in need of assistance, the Institute arranges for eye examinations and pays for medical treatment, glasses and visual aids; it also supports the operation of several Low Vision Aid Clinics and seven Eye Banks in the main cities. Social, vocational, recreational, and educational services for the blind are provided at 19 service centres to which workshops and residences are attached. Home teachers visit the newly blinded of all ages including pre-school-age children to teach them independence in daily living and other skills such as Braille, typing and handicrafts. Placement officers furnish vocational counselling and arrange for training and employment. Where possible the blind are placed in jobs in general industry, in the 425 CNIB concession stands and canteens or in farming and small businesses; others are gainfully employed in the Institute's industrial and sheltered workshops. The National Library circulates Braille magazines, books and recordings and supplies a transcription service to students.

The Health League of Canada.—The Health League of Canada, first established in 1918 as a National Committee for Combating Venereal Disease, now embraces about 75 national member associations supporting a wide variety of public health education activities to prevent disease and raise health standards. Its standing committees are concerned with various aspects of public health such as immunization, milk pasteurization, fluoridation of water, industrial health, nutrition, gerontology and other fields. The program is administered from a national office in Toronto, usually working through the affiliated organizations. Educational efforts include the provision of speakers for meetings and the preparation of radio scripts, health education films and literature; a magazine "Health" is published bi-monthly and weekly news bulletins are released to the press. The League also sponsors National Health and National Immunization Weeks.

St. John Ambulance Association.—The Order of the Hospital of St. John of Jerusalem began as a local unit in Montreal in 1884 and was incorporated on a national basis in 1910. The organization is composed of two parts—the St. John Ambulance Association and the St. John Ambulance Brigade. The first is devoted to teaching first aid and home nursing, used extensively by Civil Defence, Armed Forces, workmen's compensation and industrial personnel, and the latter to directing the emergency corps of trained personnel. The Brigade maintains first aid posts at large public gatherings and operates ambulance services in several provinces. Headquarters of the Association is in Ottawa, with provincial divisions in nine provinces controlling their own programs and financing the operation of their local branches.

The Canadian Tuberculosis Association.—Founded in 1900 to increase treatment facilities for tuberculosis patients, the Association's objective is the control and ultimate eradication of tuberculosis. The national office in Ottawa along with the ten provincial associations and 175 local branches co-operate with the public health agencies in promoting adequate facilities for prevention, diagnosis, treatment and rehabilitation. The provincial associations assist in case-finding by means of mass X-ray and tuberculin testing surveys of specific areas and groups, and carry out extensive health education work; most associations also participate in follow-up and rehabilitation of ex-patients. Publication of educational materials and periodicals and organization of the annual Christmas Seal campaign, the principal source of funds, is centred in the national office, which makes its consultant services available to federal and provincial health departments.

The National Cancer Institute of Canada.—The National Cancer Institute, composed of persons representing professional societies and agencies concerned with cancer research and therapy, was founded in 1947 to develop a nationally co-ordinated research and professional education program. The Institute promotes fundamental research through selected projects in universities, hospitals and research centres, maintains a Canadian Tumour Registry, provides training fellowships and, in co-operation with the Canadian Medical Association and medical schools, promotes professional education on cancer topics. The Institute receives support from federal and provincial grants and from the Canadian Cancer Society; research work on lung cancer is being supported by the Canadian tobacco industry.

The Canadian Hearing Society.—Organized in Toronto in 1940 as the National Society of the Deaf and the Hard of Hearing, the Society operates chiefly in Toronto and the surrounding area. It is concerned with the preservation of hearing, the treatment of deafness and the provision of rehabilitation services for those with impaired hearing, including war veterans and children. It provides otological examinations, counselling, vocational guidance and job placement services for the deaf or hard-of-hearing, and hearing aids to indigent persons.

The Canadian Mental Health Association.—Since its organization in 1918 as the National Committee for Mental Hygiene, the Association has initiated numerous measures to promote mental health and the best possible care of the mentally ill. Its program of public education, professional and lay training, services to the mentally ill, consultative services and research is carried out by the national office in Toronto, nine provincial divisions and 91 community branches. To develop public understanding of mental health principles the Association sponsors discussion groups and prepares a variety of educational materials including films for the press, radio, and TV, and for professional personnel. Services to mental patients have grown rapidly as branches have established information and referral centres in 36 communities, volunteer hospital visiting programs, White Cross rehabilitation centres and other personal services to patients and their families. Through various studies of mental health problems and the National Mental Health Research Fund, set up in 1957, the Association has stimulated new approaches to prevention and treatment in this field.

The Canadian Cancer Society.—Organized in 1938 to co-ordinate voluntary activities and disseminate knowledge in the cancer field, the Canadian Cancer Society operates in all provinces and has its national office in Toronto. Its services include a public education program, welfare services such as transportation, home nursing and cancer dressings to needy persons, and fellowships to medical graduates for advanced study in cancer. Voluntary subscriptions to the Society provide the major source of funds for the basic research program of the National Cancer Institute of Canada. The Society also sponsors clinical research projects and supports the establishment of new research facilities.

National Heart Foundation of Canada.—The Canadian Heart Foundation, formed in 1947 by physicians to co-ordinate research and disseminate information, was replaced by the National Heart Foundation of Canada in 1956. Its membership consists of lay and medical individuals and organizations interested in promoting research on cardiovascular diseases and in both public and professional education. Medical research projects are financed by voluntary donations to the National Heart Fund as well as by federal and provincial grants. The Foundation's national office is in Toronto; provincial divisions have been established in eight provinces.

The Canadian Paraplegic Association.—The Association was formed in 1945 by a group of paraplegic veterans to ensure provision of adequate treatment and rehabilitation facilities for all persons suffering paralysis caused by disease or injury. Through its national office in Toronto and five regional divisions, the Association's program covers medical and vocational services, prosthetic appliances and personal aids and other activities to promote the social well-being of paraplegics. A comprehensive rehabilitation service is provided at Lyndhurst Lodge Retraining Centre in Toronto, owned by the Association, and other care by arrangement with a number of general and veterans hospitals and rehabilitation centres. The Association, in turn, furnishes special services to veterans and workmen's compensation cases on a repayment basis.

The Canadian Council for Crippled Children and Adults.—The Council was established in 1937 to co-ordinate and support activities for the care and rehabilitation of physically handicapped children. The first provincial organization was formed in Ontario in 1922 and similar organizations, which have remained autonomous, now exist in all provinces. In 1954 the scope of the Council's interests was broadened to include the adult handicapped and, with the establishing of a national office in Toronto headed by an executive director of the Council, has since sponsored various projects in the areas of prevention, research and public education. Programs in the provinces vary, ranging from case-finding, establishment of cerebral palsy clinics and children's rehabilitation centres and operation of summer camps to payment for treatment services, prosthetics and other services. In most provinces, service clubs raise funds to support the work of the organization, particularly through the sale of Easter Seals.

The Canadian Arthritis and Rheumatism Society.—Established in 1948 to promote research, professional education and treatment services in the field of rheumatism and arthritis and to disseminate factual information, the Society has branches operating in all provinces except Prince Edward Island and Newfoundland; its national office is in Toronto. Medical advisory boards in each of the eight provinces and one at the national level give advice and guidance to the provincial and national directors. The Society sponsors an educational program both for the general public and for physicians and maintains out-patient clinics in general hospitals for the treatment of low-income patients. Its branches have pioneered in the operation of mobile physiotherapy units, now numbering 75, bring treatment to home-bound patients and in four provinces support a mobile consultative service. All divisions have liaison with employment agencies and vocational training schemes. Services are usually free or for a nominal amount. The national body promotes research projects in various universities and institutions and provides clinical fellowships to physicians in all parts of Canada.

Multiple Sclerosis Society of Canada.—The Society has been organized since 1948 to support research in multiple sclerosis and allied diseases and to educate the public on the social problem of multiple sclerosis. Its 20 local chapters located in eight provinces raise funds mainly for research but they also provide welfare services to patients in need of wheel chairs and other personal aids. Grants for eight research projects and fellowships, administered from the national office in Montreal, amounted to over $46,000 in 1960.

The Canadian Association for Retarded Children.—The Association was incorporated in 1958 to assist and give co-ordinated direction to the work of a growing number of organizations for the mentally retarded, now represented by 10 provincial and some 175 local groups. Membership of the locals exceeds 11,000, most of whom are parents of mentally retarded children. The Association promotes the establishment of clinics, day schools, institutions, workshops, and recreational programs; it also supports and encourages research into the causes of mental deficiency. Increasing numbers of day classes offer training opportunities within the community for mentally retarded children who are not acceptable for regular school instruction. Financial support comes from local fund-raising campaigns, community chests and, in varying degrees, from provincial departments of education. A national office was opened in Toronto in 1959.

The Muscular Dystrophy Association of Canada.—This Association was organized in 1954 to stimulate and unify research efforts into the cause, nature and treatment of muscular dystrophy and related diseases and to promote the establishment of facilities for diagnostic, consultative and treatment services. Under the direction of a national office in Toronto supported by 19 local chapters, its chief activity is the support of basic and applied research projects in medical schools and other centres across the country. In addition to raising funds for research projects, local chapters provide various patient services including personal aids, appliances and transportation.

PART IV.—VETERANS SERVICES*

The Department of Veterans Affairs administers most of the legislation making up the Veterans Charter and provides administration facilities for the Canadian Pension Commission which administers the Pension Act and the Civilian War Pensions and Allowances Act; for the War Veterans Allowance Board which is responsible for the administration of the War Veterans Allowance Act; and for the Secretary-General (Canada) of the Commonwealth War Graves Commission.

The main benefits now provided to veterans consist of medical treatment for those eligible to receive it, land settlement and home construction assistance, educational assistance for children of the war dead, veterans insurance, general welfare services, unused re-establishment credit, disability and widows' pensions, and war veterans allowances.

The work of the Department, excepting the administration of the Veterans' Land Act, is carried out through 17 district offices and five sub-district offices in Canada and one district office in England. There are eight Veterans' Land Act district offices and 32 regional offices established to administer the benefits of the Act.

Section 1.—Medical, Dental and Prosthetic Services

Medical Services.—The Department of Veterans Affairs, through its Treatment Services Branch, provides medical services for entitled veterans throughout Canada. Service is also provided for members of the Armed Forces, the Royal Canadian Mounted Police, and the wards of other governments or departments at the request and expense of the authorities concerned.

The primary responsibility of the Branch is to provide examination and treatment to disability pensioners for their pensionable disabilities. Other main groups of veterans receiving treatment are War Veterans Allowance recipients, veterans whose service and need make them eligible for domiciliary care, and veterans whose service and financial circumstances render them eligible for free treatment, or at a cost adjusted to their ability to pay. If beds are available, any veteran may receive treatment in a departmental hospital on a guarantee of payment of the cost of treatment. The pensioner receives treatment regardless of his place of residence, but service to other veterans is available in Canada only.

---

* Prepared by the Department of Veterans Affairs, Ottawa.

Treatment is provided in eleven active treatment hospitals located at Halifax, N.S., Lancaster, N.B., Quebec City, Montreal, and Ste. Anne de Bellevue in Quebec, Toronto and London in Ontario, Winnipeg, Man., Calgary, Alta., and Vancouver and Victoria, B.C.; also in two convalescent centres and two homes maintained for the provision of domiciliary care. The rated capacity of these institutions at Dec. 31, 1960 was 8,970 beds. An additional 584 beds were available in veterans pavilions situated at Ottawa, Regina and Edmonton. Pavilions are owned by the Department but are operated by the parent hospital, and medical staff is provided by the Department. Where departmental facilities are not available, the eligible veteran may receive treatment at the expense of the Department in an outside hospital by a doctor of his own choice. Professional staffs of active treatment hospitals are employed on a part-time basis; in the main they are recommended for appointment by the Deans of Medicine of the universities with which the hospitals are affiliated. Most members of the medical staff are engaged in teaching and private practice, and hold appointments on the medical faculties of the various universities.

In its active treatment institutions, the Department maintains research and medical teaching programs which are considered essential to attract highly qualified professional men and thus ensure the highest quality of medical care. All active treatment hospitals have been approved by the Royal College of Physicians and Surgeons of Canada for postgraduate teaching in medicine and surgery, and the majority are approved also for advanced postgraduate training in the various specialties. An intern-resident program is in effect and, at the end of 1960, 278 residents and interns were in training, together with 144 interns in occupational therapy, physiotherapy, psychology, laboratory, and medical social services. During the year, there were 87 projects in progress in the Clinical Research Program. The program is varied but in the main deals with conditions affecting aging, which the Department is in a special position to investigate. Self-contained Clinical Investigation Units have been set up in active treatment hospitals located at Montreal, Toronto, London, Winnipeg and Vancouver.

During 1960, 36 departmental employees attended courses, assisted fully or partly by the research and education vote. In addition, nursing assistants were trained at a school located at Camp Hill Hospital in Halifax. This school has an annual capacity of 70 graduates who are offered employment in departmental hospitals across the country.

Departmental hospitals provide base-hospital facilities for the treatment of members of the Armed Forces. Ste. Foy Hospital near Quebec City and Sunnybrook Hospital at Toronto have self-contained units but in the other institutions there is a close integration of patients. The units, which are staffed by Armed Forces personnel, utilize the ancillary services of the hospital and also provide training facilities for members of the medical services of the Armed Forces.

Progress continues to be made toward the provision of a nation-wide chain of modern fire-resistant institutions through replacement of obsolete accommodation. Patient-load for the year ended Dec. 31, 1960 was as follows:—

Item	*No.*
Admissions to departmental hospitals	51,787
Admissions to other hospitals	17,563
Admissions to out-patient strength	6,113
TOTAL ADMISSIONS	75,463
Patient-days in departmental hospitals	2,643,639
Patient-days in other hospitals	870,446
TOTAL PATIENT-DAYS	3,514,085

Under the federal-provincial hospital insurance program, DVA hospitals are recognized for the provision of insured services to veterans. Arrangements have been made for the payment of any necessary premiums on behalf of veterans who are in receipt of War Veterans Allowances. The Veterans Treatment Regulations remain the authority for the treatment of veterans (and others) in DVA institutions and elsewhere under departmental responsibility, regardless of whether or not the hospitalization is at the expense of the insurance plan.

Dental Services.—Dental treatment is provided for pensioned veterans, War Veterans Allowance recipients and others who are eligible for treatment under the various sections of the Veterans Treatment Regulations. Treatment is also provided for the Royal Canadian Mounted Police and other government departments on a recoverable basis. Thirty-five full-time and one half-time dental officers, together with ancillary staff, are employed in 20 dental clinics located in departmental hospitals and treatment centres across Canada.

The total dental treatment provided under departmental auspices in 1960 consisted of 120,793 operations for a total of 19,554 patients. Approximately 80 p.c. of such treatment was provided in departmental clinics and the remainder by civilian dentists in those areas where departmental facilities were not available.

Prosthetic Services.—The Prosthetic Services Section of the Department is responsible for the supply and maintenance of prostheses, orthopaedic appliances, and sensory aid devices to veterans and other persons eligible for treatment under Veterans Treatment Regulations. These appliances are issued only upon departmental medical prescription and are supplied and serviced without charge to eligible patients. The Department also extends prosthetic service upon request and, on a repayment basis, to other Federal Government departments, to allied governments, to provincial governments under certain conditions, and to workmen's compensation boards.

The physical establishment consists of a main factory at Toronto and 12 district manufacturing and fitting centres located in departmental hospitals throughout Canada; service is extended to five sub-districts by district prosthetic technicians. The Toronto factory manufactures certain prostheses, appliances and component parts, provides bulk purchasing of raw materials for distribution to other centres, provides advanced instructional courses for district staff, maintains a research section staffed by engineers and technicians, and accepts, when necessary, referrals of cases for whom routine fitting procedures are considered inadequate.

A considerable variety of appliances and accessories are supplied. In general, the Service manufactures and maintains those appliances which must be made to individual specifications such as arm and leg prostheses, braces and splints of all types, body belts, orthopaedic boots, boot aids, and many miscellaneous appliances medically prescribed for particular needs. Other appliances and accessories such as hearing aids, batteries, wheel chairs, eye glasses, elastic hosiery, rubber heels, stump socks, trusses, etc., are purchased from trade sources.

Research and development of prostheses and appliances had been carried out for many years prior to World War II by the prosthetic technicians at the Toronto Centre, who produced an imposing list of improvements in basic appliances and accessories, sometimes aided by the co-operation of the orthopaedic surgeons. In 1944, Canada made a vital ontribution by organizing, under the auspices of the National Research Council, an nternational Conference on Artificial Limbs which was attended by representatives from he United Kingdom, the United States, the Union of Soviet Socialist Republics, Australia nd Canada. Special committees were subsequently formed in the United Kingdom, the United States and Canada. In 1946, a research engineer was appointed to the National Research Council to work on prostheses and two years later was transferred to the Toronto

Prosthetic Centre as Manager where, in 1949, the importance of research was more adequately recognized by the installation of a research unit staffed by engineers and technicians. The work of the Associate Committee on Artificial Limbs (NCR-Canada) passed to this Unit and the Committee disbanded in 1951.

The utilization of many new materials that became available during and after the War paved the way for various developments and, to some extent, altered manufacturing and fitting techniques. Low-pressure laminates, using fabrics of stockinette, canvas, fibreglas, dacron or nylon together with synthetic resin, and applied with a moulding technique, produced appliance 'shells' having strength, comparative lightness, moisture resistance, permanent basic colouring, and economy of processing. In the manufacture of artificial arms, plastics displaced leather and steel construction almost entirely and to a lesser extent in artificial legs. Plastic artificial eyes similarly replaced glass eyes, as they are impervious to socket acids, easily modified for fitting, and much more durable. Polyviny chloride plastics were used to produce natural-appearing facial restorations, including ears and noses, and also cosmetic gloves for artificial hands. Stainless steel and lightweight steel alloys added strength and reduced weight in limb and brace components.

In 1949, the research unit initiated a particular effort to improve the fitting of hi disarticulation amputations, eventually producing a prosthesis based on a new approac to an old problem. This development, embracing a form-fitting, partly-flexible plasti girdle and new alignment principles, eliminated shoulder suspension, provided more comfort and improved walking ability. It created considerable international interest and i now known as the Canadian Hip Disarticulation Prosthesis. Another notable development was the plastic prosthesis for the Syme's (ankle) amputation which incorporated jointless neoprene rubber foot constructed on an inner 'keel', thereby eliminating a mechanical ankle joint. The new prosthesis also gained international recognition as a Canadia achievement.

Other successful projects included the reactivation of suction socket fittings for above knee amputations in lieu of shoulder harness or pelvic belt suspension, a prosthesis fo wrist-level amputation to preserve natural wrist turning motion, use of laminated plasti as a covering and repair material in lieu of rawhide, stainless steel and aluminum hook for arms instead of plated steel. Kroy-treated wool and rayon-wool stump socks wer added to the all-wool line. A universal ankle brace and a drop-foot lifter with singl medial support, both light and inconspicuous, were also developed as well as a plasti mechanical hand with 'positive' grip and cosmetic glove for natural appearance.

Extension of the plastic shank and jointless neoprene rubber foot components to le prostheses other than the Syme's is now on field test, together with two development under the United States program—the new hydraulically controlled prosthesis for above knee amputations and the patellar tendon bearing prosthesis for below-knee amputation both of which show great promise for early adoption. The newly developed 'quadrilatera socket for above-knee amputations is being issued upon prescription.

In the field of prosthetic research, the Department maintains close touch with researc groups elsewhere, particularly the Committee on Prosthetic Research and Developme NRC-NAS (U.S.A.), and the Standing Advisory Committee on Artificial Limbs, BM and NI (England). A Prosthetic Services Advisory Committee, on which disabled vetera are represented, meets periodically under the chairmanship of the Director General Treatment Services (DVA) to consider new scientific developments and to review metho and policies.

During the year 1960, approximately 157,000 basic appliances, accessories and repai were supplied to 80,000 patients.

Section 2.—Welfare Services

Much of the legislation designed to assist with the rehabilitation of war veterans has expired but the following programs are still of significant importance.

War Service Gratuity.—A cash payment was authorized by the War Services Act, 1944 for each veteran of World War II, the amount varying according to length of service and the theatre in which it was performed. In 1954, under the Veterans Benefit Act, this gratuity was made available to veterans of the Korean operation. Since most of the veterans of World War II had received their benefits under the former Act during the first few years following the end of the War, payments were discontinued after Dec. 31, 1954, except for those with overseas service who, because of unusual circumstances, could not apply before that date. The yearly amounts paid in gratuities up to the end of March 1955 are shown in the 1956 Year Book, p. 306. Those paid subsequently, with cumulative totals to Dec. 31, 1960, are:—

Calendar Year	*World War II Veterans*	*Special Force Veterans*
	$	$
1955	52,201	29,766
1956	13,623	8,712
1957	16,640	1,603
1958	6,296	1,999
1959	9,047	433
1960	4,615	1,985
CUMULATIVE TOTALS TO DEC. 31, 1960	470,041,437	6,694,470

Re-establishment Credit.—This benefit, also authorized by the War Service Grants Act, is equal in each case to the War Service Gratuity less the supplementary gratuity paid for overseas service. It is not given in cash to the veteran, except for balances of $50 or less, but is released on his behalf for specified purposes. World War II veterans have until Sept. 30, 1962, and veterans qualified on the basis of service with the Korean Special Force have 15 years from the date of their discharge from the Special Force to apply for this benefit. At Dec. 30, 1960, unused re-establishment credit balances totalled $13,245,496. The amounts paid during 1959 and 1960, with cumulative totals to Dec. 31, 1960, are shown in Table 1.

1.—Re-establishment Credits Paid, by Required Purpose, 1959 and 1960, with Cumulative Totals

Purpose	Calendar Year 1959	Calendar Year 1960	Cumulative Totals to Dec. 31, 1960
	$	$	$
Homes	**1,307,577**	**1,450,904**	**242,733,794**
Purchased under National Housing Act	5,685	4,696	3,350,411
Purchased other than under National Housing Act	60,154	32,147	32,545,054
Repairs, etc	140,228	191,326	17,091,148
Furniture and equipment	1,077,246	1,188,527	185,183,121
Reduction of mortgage	24,264	34,208	4,564,060
Business	**263,560**	**287,430**	**55,969,538**
Purchase of a business	1,847	699	3,679,413
Working capital	30,553	28,551	25,327,327
Tools and equipment	231,160	258,180	26,962,798
Miscellaneous	**532,773**	**1,218,568**	**12,188,588**
Insurance, annuities, etc	248,266	421,764	9,912,347
Special equipment for training	9,271	10,295	757,471
Clothing	103,574	333,284	642,615
Reimbursements	171,662	453,225	876.155
Totals	**2,103,910**	**2,956,902**	**310,891,920**

Casualty Rehabilitation.—The function of the Casualty Welfare Division is outlined in the 1956 Year Book, p. 307. At Dec. 31, 1960, there were 3,014 active cases The total number of disabled veterans then registered with the Division was 48,239 and of these 45,225 were closed cases. New cases opened during the year ended Dec. 31, 1960 numbered 837 and cases closed numbered 2,494.

2.—Registrations for Casualty Rehabilitation, by Status of Applicant and Type of Disability, to Dec. 31, 1960

Status	Registrants to— Dec. 31, 1959	Registrants to— Dec. 31, 1960	Type of Disability	Active Cases as at Dec. 31, 1959	Total Closed Cases Dec. 31, 1959	Active Cases as at Dec. 31, 1960	Total Closed Cases Dec. 31, 1960
	No.	No.		No.	No.	No.	No.
Employed	37,527	37,918	Amputations	144	2,272	104	2,320
Unemployed	891	786	Neuro-muscular and skeletal system	1,131	13,541	957	13,938
Receiving treatment, training or other services	1,478	1,221	Total and partial loss of hearing or sight	221	3,203	177	3,276

Social Services.—Social workers are employed in the Branch in a variety of ways They provide casework service to veterans and their dependants when complex persona and social problems are involved. They act as consultants to other departmental official dealing with welfare matters. They assist in the work of committees, such as the Distric Authorities, which administer War Veterans Allowances and the Assistance Fund. The supervise Branch services to dependants of members of the Armed Forces. At the reques of the Department of National Defence, the Branch furnishes reports on home circumstances of Armed Forces personnel who request compassionate leave, posting or discharg because of some domestic emergency. These problems can sometimes be solved throug counselling and referral to community welfare services. The Division is especially concerned with maintaining effective liaison, in the interests of veterans and their dependants with welfare departments at all levels of government and with private social and philanthropic organizations.

During 1959 and 1960 there were 14,315 and 13,628 requests, respectively, for service from all sources.

Older Veterans.—The Department introduced an "older veterans" specialize service at the cessation of World War II when it was apparent that the many thousand of World War I veterans serving the second time would, at their age of between 50 an 63, encounter difficulties in re-entry to civilian employment. There arose a strong movement for a dual-service pension as of right but assisting these veterans into regular gainfu employment was the obvious answer. In 1946 a Special Adviser was appointed at Hea Office, and a designated Counsellor at each district office level. The Civil Servic Commission convened a forum and stressed that age alone would not be a factor in recruitment. The National Employment Service of the Unemployment Insurance Commission placed emphasis on 'older veterans' employment placement. Voluntary citize committees were formed on community centre levels to give special attention to the local veteran job seekers of mature age.

In 1947, a National Campaign for permanent jobs for older veterans was conducte by the Departments of Veterans Affairs and Labour, and the Unemployment Insuran Commission. In 1948, the same agencies joined in a national campaign on behalf the Corps of Commissionaires, a privately operated organization dedicated to finding uniformed employment for trustworthy older veterans. Private industry and government agencies responded and some 3,000 jobs were found.

Review boards were established by the Department of Veterans Affairs and the National Employment Service on district levels to direct special efforts on behalf of veterans who, because of age or other factors, were difficult to place in employment. Newspapers and periodicals were enlisted to editorially educate the public that a man of 40 years of age was not too old to hire. The Departments of Labour and Veterans Affairs produced a film entitled "Date of Birth" to discourage age-hiring limits among employers. This film had thousands of showings to employer groups, conventions, service clubs, etc., and is being brought up to date for new showings.

In January 1951, the Department introduced the "Big 3 Plan", whereby representatives of the Canadian Legion, Unemployment Insurance Commission and Department of Veterans Affairs would sit together on the community level, as required to analyse individually cases of older unemployed veterans in their areas. A book entitled "The Problem of the Older Worker", produced in 1952 by an interdepartmental committee of research specialists, ran into several editions and many copies were requested by other countries.

An interdepartmental committee of actuarial and research specialists studied, and discussed with underwriters, the discrimination against older workers in the terms of industrial pension plans. Its report, entitled "Pension Plans and the Employment of Older Workers", was released in 1956. This study has had the effect of reducing discrimination in the hiring of older persons and has led to further studies on the transfer of pension rights between different employers.

Canadian manufacturing and construction associations and two of Canada's leading merchandizing retail organizations have co-operated in the statistical examination of work, attendance, reliability, etc., of their older employees. The Department, through the Special Adviser, has taken an active part in these co-ordinated efforts and activities which have assisted greatly in keeping the employment door open to older veterans and, at the same time, have done much to make the public aware of the social and economic hazards of allowing chronological age to be a barrier to productive employment of Canadians. By learning to assess the veteran's work capabilities and by giving useful counselling, Veterans Welfare Officers have gained employers' confidence in the employment of older veterans.

When employment is not possible for any reason, the guiding principle is to use all the resources of the Department, the provinces and the municipalities, etc., to ensure that the veteran and his dependants have the necessities of life.

There are now about a quarter of a million World War I veterans still alive, their average age being 69 years, and World War II veterans are coming into the older age group at about 10,000 a year. While by no means all require specialized services, the work load is heavy and will remain so for many years.

In 1921 authority was granted for Unemployment Assistance as a temporary relief to needy World War I small disability pensioners. At its peak in the year ended Mar. 31, 1937, the disbursement was over $2,000,000 for this assistance. In 1946, $42,300 was disbursed; in 1948, $24,900; in 1954, $11,250; and in 1960 less than $1,000. The benefit has been useful as a means of relieving municipalities of granting relief to meet urgent needs while applications for War Veterans Allowance are being processed or employment found.

Unemployment Insurance Commission returns indicate World War I veterans are holding their own in the employment field. At Jan. 1, 1960, 9,591 were registered for work; at Dec. 30, 1960, the number was 9,338. These figures are new lows over the past ten years. War Veterans Allowance is available to eligible veterans wherever Unemployment Insurance benefits or other means are within the limitations of the WVA Act.

The Corps of Commissionaires continue their commendable activity. Of nearly 6,000 uniformed veterans employed, some 2,600 are under contracts with Government departments. Of these, 78 p.c. are upwards of 60 years of age and might otherwise be recipients of War Veterans Allowance. The Special Adviser on Older Veterans acts as liaison officer between Government departments and the Corps, and otherwise assists them in the private employment field. The Corps is a self-supporting non-profit organization.

Assistance Fund.—By authority of the Assistance Fund (War Veterans Allowance) Regulations, supplementary financial aid may be provided to recipients under the War Veterans Allowance Act (see p.302) who are in need. Assistance may be given as a continuing monthly grant in accordance with a formula which includes costs of shelter, fuel, food, clothing, personal care and certain health needs, or as single grants to meet needs not covered by the formula. At Jan. 1, 1961, the maximum assistance available from the Fund was $240 and $300 per annum, respectively, to single and married WVA recipients who are resident in Canada.

Applications for assistance are made to District Authorities located in the district offices of the Department across Canada. An Assistance Fund Committee, headed by the Deputy Minister, guides the district authorities in dealing with these applications. Approximately 90 p.c. of the applicants qualify for assistance and the great majority of awards are in the form of continuing monthly grants. Fund activity during 1959 and 1960 was as follows:—

Item		*1959*	*1960*
Persons assisted	No.	16,551	19,558
Persons applying during year	"	6,175	7,051
Applicants assisted	"	5,488	6,303
Proportion of applicants assisted	p.c.	89	89
Fund expenditures during year	$	2,480,479	2,964,757
Proportion of expenditures given in monthly grants	p.c.	90	91
Persons in receipt of continuing monthly grants	No.	13,365	15,290

Education and Training.—Except for disability pensioners and a few other special cases delayed by illness, eligibility for training under the Veterans Rehabilitation Act and the Veterans Benefit Act, 1954 has expired because of the time limits imposed by these Acts. The Pensioners' Training Regulations were consolidated in 1959 and now provide essential training for pensioned veterans without affecting or being affected by other benefits they may have received. These regulations also provide for the training of pensioned ex-members of the regular and reserve Forces. The numbers on training strength at Dec. 31, 1959, and Dec. 31, 1960, respectively, were as follows:—

Type of Training	*Dec. 31, 1959*	*Dec. 31, 1960*
	No.	No.
University Training—		
World War II veterans	46	16
Special Force	24	7
Vocational Training—		
World War II veterans	16	1
Special Force	3	2
Pensioner Training—		
University	13	20
Vocational	27	28
TOTALS	129	74

Under the Children of War Dead (Education Assistance) Act, help may be provided for post-secondary school training for children of deceased ex-servicemen whose deaths have been ruled by the Canadian Pension Commission as attributable to, or incurred during, war service or attributable to regular Force service. Eligible students attending approved training institutions receive an allowance of $25 a month if under age 21 and

$60 a month if over that age. The total period during which assistance may be granted may not exceed four academic years or 36 months, whichever is the lesser. In any event the benefit cannot be continued beyond the academic year in which the student reaches his 25th birthday. Prescribed fees, not exceeding $500 for any one academic year, may be paid on behalf of each student. Up to Dec. 31, 1959, 1,738 applications had been approved under this Act. At Dec. 31, 1960, the number had risen to 2,088.

Awaiting Returns Allowance.—This allowance is a sustenance grant to assist the veteran to maintain himself and his family during the early stages of a venture when the income therefrom is negligible or insufficient. Because of the time limit imposed on this benefit by the Veterans Rehabilitation Act, only veterans who settle under the Veterans' Land Act and who apply for the allowance within one year of the date of such settlement are now eligible. The allowance is paid for periods when the net income, plus the allowance, does not exceed the maximum rate of $50 per month for a single veteran and $70 for one who is married plus additional allowances for up to six children. The allowance may not be paid for more than 52 weeks and is available for two years after the date of the initial award.

Up to Dec. 31, 1960, 63,076 veterans, including 67 ex-members of the Special Force, had been approved for this benefit at a total expenditure of $27,352,646. At that date there were 45 active cases.

Vetcraft.—A short history of Vetcraft is shown in the 1959 Year Book, p. 293. Shops are now operated at Toronto and Montreal providing full-time employment for a number of veterans and widows and, in addition, small assembly work is done in Winnipeg, Regina and Calgary, providing part-time employment for other workers. Production for the year 1960 which was sold entirely to the Dominion Command of the Canadian Legion, amounted to 6,127,937 poppies and 69,229 memorial wreaths and crosses.

Section 3.—Veterans Life Insurance

Returned Soldiers' Insurance.—The Returned Soldiers' Insurance Act (SC 1920 c. 54, as amended) provided eligibility to contract for life insurance at rates comparable with those available commercially, but the medical standard required of applicants was much lower than was otherwise acceptable. Applications were accepted from 1920 to 1923 and from 1928 to 1933. No policies have been issued since Aug. 31, 1933. On Dec. 31, 1960, of the total of 48,319 policies issued there remained 9,148 policies in force for a face amount of $19,391,549.

Veterans Insurance.—The Veterans Insurance Act (SC 1952, c. 279, as amended) provides eligibility to contract for life insurance to veterans of World War II, those who served in the action in Korea and certain other groups. The period of eligibility to apply for this insurance, up to a maximum of $10,000, extends to Sept. 30, 1962. This Act makes it possible for veterans unable to meet the required medical standards of the usual commercial insurance companies to obtain life insurance. The intent of the legislation is the protection of the immediate dependants of the veteran. There are no occupational restrictions and the contract provides for a waiver of premium, without extra cost, where a veteran becomes totally and permanently disabled.

Of the 50,115 applications received to Dec. 31, 1960, only 86 had been declined for medical reasons. Of the 48,340 policies issued, 30,703 for a face amount of $95,836,042 remained in force on that date, 12,163 policies had been surrendered for their cash value and 2,793 policies were terminated by lapse and extended term insurance expiry. There were 2,681 policies terminated by death.

3.—Death Claims Intimated to Dec. 31, 1960, with Cumulative Totals 1921-50

Year	Returned Soldiers' Insurance		Veterans Insurance	
	No.	$	No.	$
1921-50	8,128	17,510,282	174	486,500
1951	379	720,810	122	370,000
1952	418	817,559	178	461,500
1953	412	813,446	189	544,500
1954	421	821,930	187	495,500
1955	428	799,440	177	512,740
1956	434	813,743	216	590,868
1957	447	842,608	225	639,048
1958	486	902,324	254	687,145
1959	436	835,327	283	806,546
1960	462	928,255	357	1,096,010

Section 4.—Land Settlement and Home Construction

Veterans' Land Act.—The major amendments made to the Act in 1959, as summarized on p. 339 of the 1960 edition of the Year Book, created a substantial increase in the volume of loan approvals and expenditures in 1960. A total of 1,851 loans were approved on behalf of veterans desiring settlement as small holders and commercial fishermen, 10.2 p.c. more than in the previous year. While this increase was significant, the most marked effect of the amendments occurred in the field of farm loans with financial assistance to the amount of $14,914,122 being expended on behalf of 2,086 farmers compared with $5,275,344 for 938 farmers in 1959.

In broadening the uses and raising the financial ceiling of farm loans from $9,000 to $20,000, the legislative amendments made in 1959 stipulated that the basic purpose of such loans was the acquisition or development of economic farm units. Under the Regulations, such a unit is defined to mean an organized assembly of farm land, buildings, livestock and farm equipment, or any combination thereof, which will produce a net income capable of retiring the remaining capital cost of the farm (75 p.c.) over a period of 30 years and of supplying the veteran and his family with a typical Canadian standard of living. These provisions, together with other requirements that each loan must be based on the estimated agricultural productive value of the unit and that an applicant for a loan in excess of 65 p.c. of the agricultural productive value must agree to follow an acceptable farm plan, constitute 'built-in' safeguards both for the investment of public funds and the successful establishment of veterans as full-time farmers.

These various safeguards and controls have increased the duties and responsibilities of the Farm Credit Advisers in the field. In addition to the advisory and rehabilitation service previously provided, intensive pre-loan counselling has proved essential to promote the best use of the increased loans available. The Credit Adviser must, with the applicant, assess the farmer's credit needs, ensure that he is capable of making proper use of the funds available within the limits of the legislation and ensure that the money is expended in an effective manner. It is also his responsibility to appraise the farm unit that will represent security for the loan and to estimate its agricultural productive value under typical operation. Appraisal on this basis has required an intensified training program and the assembly of considerable data relating to gross income, operating costs, etc., pertaining to the various types of farming followed in different parts of Canada.

Arrangements were completed during 1960 for the joint utilization by the Veterans Land Administration and the Farm Credit Corporation of the 197 Farm Credit Advisers and 38 Credit Supervisors employed throughout Canada by both organizations. The work of these officials now relates almost entirely to full-time farming applications and supervised farm loan accounts; the work-load pertaining to small holding establishments and new house construction is handled by 57 Settlement Officers and 67 Construction Supervisors.

At the end of December 1960, a total of 86,164 veterans had received financial assistance under the various types of settlement provided in the Act and more than $483,000,000 had been expended. Active accounts numbered 54,007, including 553 Indian veterans settled on Indian reserves whose accounts are administered by the Department of Citizenship and Immigration. During 1960, approvals were made on behalf of 4,544 veterans of World War II and the Special Force, including 2,086 for full-time farming, 1,812 for small holdings, 39 for commercial fishing, 20 for settlement on Crown lands, 24 on Indian reserves and 563 for home building on city-size lots. During 1960, a total of 10,965 appraisals were carried out. The joint field staff made 8,422 farm appraisals between Apr. 1 and Dec. 31, 1960, of which 2,168 related to farm loan applications made under the Veterans' Land Act.

At Dec. 31, 1960, a total of 29,262 houses had been started, of which 27,644 were completed. During 1960, 1,526 houses were started, 70 more than in 1959; completions in 1960 numbered 1,607 compared with 1,564 in 1959. In addition, 1,158 veterans received approval to effect additions or improvements to their homes and other buildings.

The repayment record of the settled veterans continues to be very satisfactory. The total amount returned to the Treasury from current active accounts represents 103.7 p.c. of the total amount due and owing on 51,614 accounts. Of the $441,000,000 expended on behalf of 75,743 veterans established with repayable contracts, over 56 p.c. had been repaid by the end of December 1960. Included in this percentage was the amount of $57,000,000 constituting conditional grants earned by 34,958 veterans who had fulfilled the terms of settlement for the first ten years of their contracts.

One of the factors contributing to the very favourable repayment record of the VLA settlers is that over 23,000 have adopted one of the various pre-arranged payment plans made available to them such as post-dated cheques, orders on pensions, and salary assignments. In addition, there were 880 share-of-crop agreements in effect in the spring wheat areas of the Prairie Provinces. At the end of December 1960, 1,821 veterans had completely repaid their contract debts and had only to fulfil the residence or personal operation requirements of their agreements for the remainder of their ten-year conditional grant periods in order to acquire title.

4.—Summary of Settlement and Expenditures under the Veterans' Land Act, as at Dec. 31, 1960

NOTE.—This table does not include details relative to sales of reverted or surplus property to civilian purchasers.

Item		Full-Time Farming	Small Holdings	Commercial Fishing	Provincial Lands	Federal Lands	Indian Reserves	City-Size Lots	Total

Section 5.—Veterans' Bureau

The Veterans' Bureau, which has completed its 29th year of operation, is a branch of the Department of Veterans Affairs administered from Head Office in Ottawa by an officer called the Chief Pensions Advocate. He is assisted by Pensions Advocates who are located in all districts in Canada in which offices of the Department are situated, and at the district office in London, England.

The duties of Pensions Advocates, most of whom are lawyers, are to assist former members of the Armed Forces and their dependants, and former members of the various auxiliary organizations such as merchant seamen, firefighters and others, in preparing and presenting pension claims to the Canadian Pension Commission. The Pensions Advocates also appear as counsel for applicants before the Appeal Boards of the Commission and, in addition, they advise pensioners and applicants upon any provision of the Pension Act or phase of pension law or administration that may have a bearing on the applicant's pension claim. No charge is made for the services of the Veterans' Bureau.

Requests for the services of the Veterans' Bureau continue to grow from year to year. Since 1953, 40,580 claims have been submitted by the Veterans' Bureau to the Canadian Pension Commission for adjudication. During the year ended Mar. 31, 1960, a total of 6,520 claims were submitted to the Canadian Pension Commission by the Veterans' Bureau, a 26-p.c. increase over the number presented in 1953.

During the same fiscal year the Veterans' Bureau submitted 1,526 straight entitlement claims to the Canadian Pension Commission with respect to service rendered in World War I and peacetime, of which 173 or about 11 p.c. were wholly or partially granted. However, with respect to claims based on service in World War II and Korea, out of a total of 3,692 presented, 1,481 or approximately 40 p.c. were wholly or partially granted. In addition, during the year ended Mar. 31, 1960, the Veterans' Bureau submitted 1,302 miscellaneous claims to the Canadian Pension Commission (these included applications for leave to re-open, following an Appeal Board Hearing, claims for higher degree of aggravation, increased assessment, retroactive awards, etc.), of which 680 or 52 p.c. were wholly or partially granted.

Section 6.—Veterans Pensions

Canadian Pension Commission.—The Canadian Pension Commission is a statutory body charged with the administration of the Pension Act and the Civilian War Pensions and Allowances Act. The members of the Commission are appointed by the Governor in Council who may also impose upon the Commission duties in respect of any grants in the nature of pensions, etc., made under any statute other than the Pension Act. It reports to Parliament through the Minister of Veterans Affairs.

It is the responsibility of the Commission to adjudicate on claims for injury or disease resulting in disability or death, incurred during service with the Canadian Navy, Army or Air Force during war or peacetime. The Commission may also supplement certain awards of pension made by the British or Allied Governments (see 1956 Year Book, p. 304). The Commission's representatives, called Pension Medical Examiners, are located in most of the district offices of the Department of Veterans Affairs across the country.

The Pension Act.—Previous issues of the Year Book contain information on the development of Canadian pension legislation, together with yearly statistics of numbers and liabilities. The Pension Act has not been amended since 1957. The major amendments at that time are summarized in the 1959 Year Book, p. 297.

The annual rates for a 100-p.c. disability for all ranks up to and including that of Lieutenant-Colonel and equivalent ranks are:—

	$
Pensioner	1,800
Wife	600
First child	240
Second child	180
Each subsequent child	144

For assessments lower than 100 p.c., the awards are proportionately less. The rate of personal pension is slightly higher if the pensioner held the rank of Colonel or higher rank but the additional pension for wives and children remains the same for all ranks.

In addition to pension, attendance allowance is payable to a pensioner who is totally disabled and in need of attendance, and varies from a minimum of $480 to a maximum of $1,800 depending on the amount of attendance required. While a pensioner must be totally disabled to receive this allowance, the disability resulting in the need of attendance may be non-pensionable. The rates for the various classifications under which awards are made are set by the Commission. These rates are reviewed from time to time and such changes as may be considered advisable made. In line with this policy, the rate of attendance allowance for total blindness was increased from $1,200 to $1,440 per annum with effect from Apr. 1, 1960, and adjustments made where applicable.

The annual rates of pension for widows and children of all ranks up to and including that of Lieutenant-Colonel and equivalent ranks are:—

	$
Widow	1,380
First child	480
Second child	360
Each subsequent child	288

Rates for widows are slightly higher if the deceased veteran held the rank of Colonel or higher rank but those for children remain the same for all ranks.

The Civilian War Pensions and Allowances Act provides for the payment of pensions to, or on behalf of, persons who served in certain civilian groups that were closely associated with the World War II effort, and who suffered injury or death as a result of such service; these include merchant seamen, saltwater fishermen, auxiliary services personnel, ferry pilots of the RAF Transport Command, firefighters who served in the United Kingdom, etc.

6.—Pensions in Force under the Pension Act, as at Dec. 31, 1960

Service	Disability		Dependant		Disability and Dependant	
	Pensions in Force	Liability	Pensions in Force	Liability	Pensions in Force	Liability
	No.	$	No.	$	No.	$
World War I	46,054	36,128,959	14,681	19,449,683	60,735	55,578,642
World War II	105,332	69,130,275	17,278	19,077,573	122,610	88,207,848
Peacetime	1,359	727,210	505	787,739	1,864	1,514,949
Special Force	1,644	921,966	171	212,901	1,815	1,134,867
Totals	**154,389**	**106,908,410**	**32,635**	**39,527,896**	**187,024**	**146,436,306**

The total number of World War I disability and dependant pensions in force at Dec. 31, 1959 was 63,240, and for World War II, 122,296. Thus during 1960 the decrease in World War I pensions numbered 2,505 and in World War II pensions 314. The Commission still receives claims from World War I veterans and their dependants. In 1960, 149 new disability pensions and 546 dependant pensions were authorized in respect of World War I veterans and 1,774 new disability pensions and 586 dependant pensions in respect of World War II veterans.

In addition to its other duties, the Commission authorizes and pays the monetary grants which accompany certain awards for gallantry granted by the Sovereign to members of the Canadian Forces during World War II. Payments in respect of such awards earned by members of the Canadian Forces during World War I or earlier are paid by the United Kingdom Government. Advice was received from that Government that the annuity accompanying the award of the Victoria Cross had been increased to £100, payable regardless of rank or means. As a result, the Canadian Government cancelled the annuities in payment to holders of the Victoria Cross and granted annuities of $300, payable monthly, commencing Apr. 1, 1960, to each surviving member of the Canadian Forces who had been awarded the Victoria Cross during World War II, regardless of rank or means. Previously, only those below commissioned rank received an annuity—$50 paid semi-annually—except in cases of need due to age or infirmity, when an annuity up to $375 could be paid regardless of rank. In addition to the annuity, holders of the award below commissioned rank who were disability pensioners or War Veterans Allowance recipients were also entitled to receive a per diem allowance of 12½ cents a day. This allowance was not affected by the increased annuity.

Section 7.—War Veterans Allowances

War Veterans Allowance Board.—The War Veterans Allowance Board is a statutory body responsible to the Minister of Veterans Affairs for the administration of the War Veterans Allowance Act. Members are appointed by the Governor in Council and at present number seven, one of whom is the Chairman; two Members serve without remuneration. The Board is located in Ottawa. Its functions include the responsibility of ensuring that all 18 district authorities interpret the legislation in a fair, reasonable and equitable manner. It standardizes administrative procedures and reviews the decisions of the district authorities and its own former decisions.

The Board adjudicates all applications from widows of veterans who were not residing with or being maintained by their veteran-husband at the time of his demise. There were 103 such cases received during 1960, of which 80 were approved.

One of the important functions of the Board is to consider all appeals from veterans, widows or orphans against any decision of the WVA district authorities. These emanate from applicants, recipients or their relatives or agents on their behalf. Agents include representatives of veterans organizations, principally the Canadian Legion. Appeals are also initiated by the Board itself and thus may be taken against district authorities' decisions or former Board decisions. Such appeal decisions may approve, set aside, alter or amend any former decision of the Board or any decision of the district authorities. The subject matter of such appeals may include the effective date of awards, rate of allowances to be granted, service eligibility, marital or dependent status, resident classification, exemptions and assessment of income, classification and evaluation of real or personal property.

War Veterans Allowance Act.—The Government in the late 1920's became aware that many war veterans were experiencing difficulties in providing for their own maintenance because of age or physical or mental incapacities. Following study the consensus of medical opinion indicated that service in the trenches had pre-aged a veteran by ten years. Accordingly, the War Veterans Allowance Act was passed in 1930 to provide a maintenance allowance to war veterans who, by reason of age or physical or mental disability, were no longer capable of maintaining themselves.

Since its inception, this Act has been amended on ten occasions. Each time, the provisions have been extended to meet additional needs of war veterans and their dependants. In 1943, provision was made to pay allowances to widows of veterans. In the following year, allowances were extended to orphans of veterans. In 1950, an amendment was passed setting up district authorities empowered to adjudicate applications which previously had been the responsibility of the Board (see p. 302).

The most recent legislative amendments became effective Aug. 1, 1960. A new and important principle provides for payments of allowances to recipients who take up residence outside Canada providing they were resident in Canada for 12 months immediately prior to their departure. This amendment permits many recipients to reside in other countries where the climate is less severe or to live with members of their families from whom they have been separated. Provision is also made for allowances to be paid to ex-Imperials and Allied Veterans of World War II who have been resident in Canada for a period of ten years; widows and orphans of these veterans also become eligible. Other details on eligibility are given in the 1959 Year Book, p. 298. The rates of allowances payable and the income ceilings have not changed since Nov. 1, 1957. Details are to be found in the 1959 Year Book, p. 299.

The numbers of veterans and others in receipt of allowances at the end of each of the years 1956-60, together with the amounts of allowances paid, are as follows:—

As at Dec. 31—	*Veterans in Receipt of Allowances*	*Others in Receipt of Allowances*	*Total in Receipt of Allowances*	*Expenditure*
	No.	No.	No.	$
1956	39,543	15,193	54,736	40,853,773
1957	41,820	16,601	58,421	45,187,400
1958	45,466	18,659	64,125	53,970,728
1959	47,393	20,141	67,534	56,927,614
1960	48,521	21,421	69,942	58,207,130

During 1960, 72,836 cases were reviewed by the 19 district authorities across Canada so that changes in the financial, physical or domestic circumstances of the recipients concerned might be reflected in the allowance being paid; 20,654 cases were reviewed by the War Veterans Allowance Board at Ottawa to ensure uniformity in the application of the provisions of the legislation in all districts; and 576 appeals from adjudications were dealt with by the Board.

Section 8.—Commonwealth War Graves Commission

Incorporated by Royal Charter in 1917 as the Imperial War Graves Commission, the name was changed by a Supplemental Royal Charter on Apr. 1, 1960 to the Commonwealth War Graves Commission. The Governments of the United Kingdom, Canada, Australia, New Zealand, South Africa, India and Pakistan are members of the Commission and are represented by their High Commissioners in London.

The Commission is entrusted with the marking and maintenance, in perpetuity, of the graves of those of the British Empire and Commonwealth Armed Forces who lost their lives between Aug. 4, 1914 and Aug. 31, 1921, and between Sept. 3, 1939 and Dec. 31, 1947. The Commission erects memorials to commemorate those with no known grave. In many of the cemeteries and plots a central feature is the Cross of Sacrifice or the Great Stone of Remembrance. The Minister of Veterans Affairs is the Agent of the Commission in Canada and the office of the Secretary-General of the Canadian Agency is in the Veterans Affairs Building, Ottawa.

The area of responsibility of the Canadian Agency is the Continent of North America but it has also certain duties of inspection in Argentina, the Bahamas, Barbados, Bermuda, Brazil, British Guiana, British Honduras, Chile, Costa Rica, Cuba, Falkland Islands, French West Indies, Guatemala, Hawaiian Islands, Jamaica, Leeward Islands, Netherlands Antilles, Panama Canal Zone, Peru, Puerto Rico, Trinidad, Uruguay and Windward Islands. In North America the Agency is responsible for about 13,000 war graves in more than 2,000 cemeteries. Approximately 4,100 servicemen of both Wars, missing in operations while based in North America, are commemorated on memorials erected at Victoria, B.C., Halifax, N.S., and Ottawa, Ont. The only Stone of Remembrance in Canada erected by the Agency is in Brookside Cemetery, Winnipeg, and was unveiled by the Premier of Manitoba on Oct. 2, 1960. It honours the memory of the sailors, soldiers and airmen of the Commonwealth who served in World War I and World War II and who lie buried in Canada.

Section 1.—Canadian Criminal Law and Procedure†

The system under which justice is administered in a State is never rigid. To have it so would be neither expedient nor indeed possible. A judicial system must grow and adapt itself to the requirements of the people and the exact limits of the powers of different legislative bodies require continued definition.

The criminal law of Canada has as its foundation the criminal common law of England built up through the ages and consisting first of customs and usages, and later expanded by principles enunciated by generations of judges. There is no statutory declaration of the introduction of English criminal law into those parts of Canada that are now the Provinces of New Brunswick, Nova Scotia and Prince Edward Island. Its introduction there depends upon a principle of the common law itself by which English law was declared to be in force in uninhabited territory discovered and planted by British subjects, except in so far as local conditions made it inapplicable. The same may be said of Newfoundland although the colony dealt with the subject in a statute of 1837. In Quebec its reception depends upon a Royal Proclamation of 1763 and the Quebec Act of 1774. In each of the other provinces and in the Yukon and Northwest Territories the matter has been dealt with by statute.

The judicial systems of the provinces as they exist today are based upon the British North America Act of 1867. Sect. 91 of the Act provides that "The exclusive legislative authority of the Parliament of Canada extends to . . . the criminal law, except the constitution of courts of criminal jurisdiction but including the procedure in criminal matters". By Sect. 92 (14), the legislature of the province exclusively may make laws in relation to "the administration of justice in the province, including the constitution, maintenance and organization of provincial courts, both of civil and criminal jurisdiction and including procedure in civil matters in its courts". The Parliament of Canada may, however (Sect. 101), establish any additional courts for the better administration of the laws of Canada.

---

* Except as otherwise credited, this Chapter has been revised in the Judicial Section, Health and Welfare Division, Dominion Bureau of Statistics.

† Prepared by the Criminal Law Section, Department of Justice, Ottawa.

It should be noted that the Statute of Westminster, 1931 effected important changes particularly by abrogating the Colonial Laws Validity Act, 1865 (U.K.) and confirming the right of a dominion to make laws having extraterritorial operation. Particulars of the federal judiciaries are given in Chapter II, pp. 75-76, and provincial judiciaries are dealt with briefly at pp. 76-77; more detailed information on provincial judiciaries is given in the 1954 Year Book, pp. 48-55.

At the time of Confederation each of the colonies affected had its own body of statutes relating to the criminal law. In 1869, in an endeavour to assimilate them into a uniform system applicable throughout Canada, Parliament passed a series of Acts some of which dealt with offences of special kinds and others with procedure. Most notable of the latter was the Criminal Procedure Act, but other Acts provided for the speedy trial or summary trial of indictable offences, the powers and jurisdiction of justices of the peace in summary conviction matters and otherwise, and the procedure in respect of juvenile offenders.

Codification of the criminal law through a Criminal Code Bill founded on the English draft code of 1878, Stephen's *Digest of Criminal Law*, Burbidge's *Digest of the Canadian Criminal Law*, and the relevant Canadian statutes was brought about by the Minister of Justice, Sir John Thompson, in 1892. This Bill became the Criminal Code of Canada and came into force on July 1, 1893. It must be remembered, however, that the Criminal Code was not exhaustive of the criminal law. It was still necessary to refer to English law in certain matters of procedure and it was still possible to prosecute for offences at common law. Moreover, Parliament has declared offences against certain other Acts, e.g., the Opium and Narcotic Drug Act, to be criminal offences and the same was done in the Defence of Canada Regulations and the Wartime Prices and Trade Board Regulations (neither now in force) promulgated under the authority of the War Measures Act.

It is often difficult to distinguish between 'law' and 'procedure'. Procedure may be interpreted to relate simply to the organic working of the courts but, in a wider sense, it may also affect the rights or alter the legal relations arising out of any given state of facts. For present purposes it will be useful to note that writers on jurisprudence describe law as being substantive or adjective. "Substantive law is concerned with the ends which the administration of justice seeks; procedural (adjective) law deals with the means and instruments by which these ends are to be obtained."* With reference to the criminal law, the former may be taken to include the provisions concerning criminal responsibility, the definition of 'offences' and the punishment for those offences, and the latter to include provisions for enforcement, e.g., powers to search and to arrest, for the modes of trial and for the proof of facts. Broadly speaking, the Criminal Code observes the distinction although it might appear that the provisions for preventive detention of habitual criminals and criminal sexual psychopaths partake of the nature of both classes.

An examination and study of the Criminal Code was authorized by Order in Council dated Feb. 3, 1949, and the Commission assigned the task of revising the Code presented its report with a draft Bill in February 1952. After coming before successive sessions of Parliament it was finally enacted on June 15, 1954 and the new Criminal Code (SC 1953-54, c. 51) came into effect on Apr. 1, 1955. A short outline of the system that existed under the repealed Code together with the major revisions effected by the new Code is given in the 1955 Year Book, pp. 295-298.

Since the new Code came into force several amendments have been made, for the most part in relation to procedure. Among the most notable of these, as well in point of procedure as of substance, are: an amendment in 1956 providing that motions for leave to appeal to the Supreme Court of Canada in criminal cases should be heard by a quorum (at least five) of judges of that Court instead of a single judge; amendments effected by SC 1959, c. 41, providing a statutory extension of the definition of "obscenity" and making provision for seizure and condemnation of offending material without a charge necessarily being laid against any person; extensive amendments relating to the allowing of time for payment of fines; amendments dealing with offences committed in aircraft in flight over the high seas; an amendment forbidding the publication in a newspaper or broadcast of a report that any admission or confession was tendered in evidence at a preliminary inquiry or a report of the nature of such admission or confession unless the accused has been discharged or, if the accused has been committed for trial, the trial has ended.

---

* Salmond on *Jurisprudence*, 7th Edition, p. 496.

The Parole Act (SC 1958, c. 38), brought into force on Feb. 15, 1959, revises the parole system and provides for the establishment of a National Parole Board (see p. 333).

It is most important to notice that in 1960 (SC 1960, c. 44), Parliament enacted what is to be known as the Canadian Bill of Rights. Although the Act sets out further details, its general scope appears in Sect. 1 which reads as follows:—

> "1. It is hereby recognized and declared that in Canada there have existed and shall continue to exist without discrimination by reason of race, national origin, colour, religion or sex, the following human rights and fundamental freedoms, namely,
>
> (*a*) the right of the individual to life, liberty, security of the person and enjoyment of property, and the right not to be deprived thereof except by due process of law;
>
> (*b*) the right of the individual to equality before the law and the protection of the law;
>
> (*c*) freedom of religion;
>
> (*d*) freedom of speech;
>
> (*e*) freedom of assembly and association; and
>
> (*f*) freedom of the press."

Section 2.—Adult Offenders and Convictions

The main interest in adult criminal statistics is concerned with those persons guilty of the more serious crimes. Such offenders are fewer than those who commit summary conviction offences but, from the standpoint of the protection of society, they are more important.

Statistics of indictable crimes are based on *persons*. When a person is prosecuted at the same hearing for several offences, one of those offences is selected for tabulation. The rule followed is to select the offence for which the proceedings were carried to the furthest stage—to conviction and sentence where the prisoner was tried on several charges; where there were several convictions, the offence selected is that for which the heaviest punishment was awarded; where the final result of proceedings on two or more charges was the same, the most serious offence (as measured by the maximum penalty allowed by the law) appears in the tables. Where a person was prosecuted for one offence and convicted of another (e.g., charged with murder and convicted of manslaughter), the case appears only under the offence for which he was convicted. Statistics of summary conviction offences (pp. 318-322) are based on *convictions*.

The figures include only cases finally determined within the year. Those not entirely disposed of within the year (e.g., tried but sentence postponed) are held over for the next year's report.

The new Criminal Code, which became law in 1954 (SC 1953-54, c. 51), necessitated the alteration of certain statistical classifications. For instance, in the classification of indictable offences regroupings were made and some items added and others dropped. Also, indictable offences under the Criminal Code were shown separately from those under federal statutes. Summary convictions were classified as offences under the Criminal Code, federal statutes, provincial statutes and municipal by-laws, and methods of trial were arranged to conform with the provisions of the new Criminal Code. Thus, any comparisons between the data for 1956 and subsequent years and the data previously published should be made with care.

Subsection 1.—Adults Convicted of Indictable Offences

During 1959, the courts of Canada dealt with 34,812 adults charged with 64,085 indictable offences, of whom 31,092 were found guilty of 56,204 offences. These figures show a decrease from those of 1958 when 38,415 adults were charged with 69,983 indictable offences and 34,546 were found guilty of 62,839 offences.

1.—Persons Convicted of Indictable Offences, with Ratio per 100,000 Population 16 Years of Age or Over, by Province, 1958 and 1959

Province or Territory	Persons Convicted		Persons Convicted per 100,000 Population 16 Years of Age or Over	
	1958	1959	1958	1959
	No.	No.	No.	No.
Newfoundland	575	551	231	217
Prince Edward Island	134	84	213	131
Nova Scotia	1,353	1,362	299	299
New Brunswick	991	758	283	211
Quebec	7,127	6,250	232	199
Ontario	12,953	12,077	330	302
Manitoba	1,501	908	260	155
Saskatchewan	1,558	1,165	271	200
Alberta	3,766	3,404	489	429
British Columbia	4,512	4,415	425	411
Yukon and Northwest Territories	76	118	382	578
Canada	**34,546**	**31,092**	**311**	**274**

Indictable offences are classified according to the main sources of the criminal law—the Criminal Code and federal statutes. Indictable offences under the Criminal Code are grouped into six classes as shown in Table 2. In 1959, persons convicted of assaults of various kinds and obstructing police represented 79.6 p.c. of Class I, which covers offences against the person. In that year 16 persons were convicted of murder, 17 of attempted murder and 99 of manslaughter as compared with 16, 11 and 82, respectively, in 1958.

Classes II to V deal with offences against property. Thefts predominate among the offences in these classes, and breaking and entering and robbery, serious crimes which involve acts of violence, are the next most numerous. In Class VI, which includes miscellaneous offences, the most numerous convictions are for offences connected with gaming, betting and lotteries. In 1959 there were 565 offenders under the Opium and Narcotic Drug Act, of whom 470 were convicted of possessing heroin and 55 of trafficking; 387 were males and 511 were born in Canada. British Columbia courts convicted 59.3 p.c. of the drug offenders and Ontario courts 31.7 p.c.

2.—Adults Charged and Convicted of Indictable Offences, by Class of Offence, 1958 and 1959

Class of Offence	1958			1959			Increase or Decrease in Persons Convicted

Female Offenders.—There were 2,115 female offenders convicted of indictable offences in 1959, 42.7 p.c. of whom were in Ontario, 17.4 p.c. in British Columbia and 14.7 p.c. in Quebec. Of the total females convicted in that year, 54.8 p.c. were found guilty of theft and having in possession, 8.4 p.c. of false pretences and fraud and 6.9 p.c. of various assaults.

PERSONS CONVICTED OF INDICTABLE OFFENCES BY CERTAIN AGE GROUPS

Multiple Convictions.—Table **5** shows the number of persons having more than one conviction at a court appearance for the years 1955-59. Multiple convictions occur most often in cases of forgery and uttering, false pretences, theft, having in possession, and breaking and entering.

5.—Persons Convicted of More than One Offence at the Time of Trial compared with Persons Convicted of One Offence, 1955-59

Item	1955	1956	1957	1958	1959

Grand Totals	**28,273**	**27,413**	**31,765**	**34,546**	**31,092**

Disposition of Cases and Recidivism.—Of all suspects before the courts for indictable offences in 1959, 89.3 p.c. were adjudged guilty; the convictions against males (89.6 p.c.) constituted a higher percentage than those against females (85.9 p.c.) and varied considerably between provinces. New Brunswick and Prince Edward Island showed the highest percentages (97.7 and 96.5 p.c., respectively) of convictions and Ontario the lowest (87.1 p.c.).

6.—Persons Charged and Convictions for Indictable Offences, by Province, 1958 and 1959

Province or Territory	1958			1959		
	Charges	Convictions		Charges	Convictions	
	No.	No.	p.c.	No.	No.	p.c.
Newfoundland	604	575	95.2	584	551	94.3
Prince Edward Island	138	134	97.1	86	83	96.5
Nova Scotia	1,524	1,353	88.8	1,546	1,362	88.1
New Brunswick	1,006	991	98.5	773	755	97.7
Quebec	7,878	7,127	90.5	7,095	6,252	88.1
Ontario	14,896	12,953	87.0	13,873	12,080	87.1
Manitoba	1,550	1,501	96.8	932	908	97.4
Saskatchewan	1,629	1,558	95.6	1,232	1,165	94.6

No Bill	11	11	Reiterated convictions	8,209	11,029
Detention because of insanity	37	40	Not given	8,776	6,101

Sentences.—In 1959, 22 p.c. of the persons convicted of indictable offences were fined, 35.2 p.c. were sent to gaol without option of fine, 6.7 p.c. were committed to reformatories and 8.6 p.c. to penitentiaries, and 27.5 p.c. were given suspended sentences with or without probation. Two criminal sexual psychopaths and one habitual criminal were given preventive detention, four persons received a life sentence and 16 were given the death penalty. The proportions in 1959 were much the same as in recent preceding years.

Court Proceedings.—In 1959, 65 p.c. of the persons tried by a judge and jury were convicted; trials by a judge without a jury brought convictions in 72 p.c. of the cases so tried; trials by a magistrate with consent ended in convictions in 91.1 p.c.; and those by a magistrate who had absolute jurisdiction, in 90.9 p.c. of the cases. Of the persons charged with an indictable offence, 92.1 p.c. were tried by magistrate or juvenile and family courts, 5.4 p.c. in county and district courts and 2.5 p.c. in higher courts.

Subsection 2.—Young Adult Offenders (16-24 Years)

Young men and women from 16 to 24 years of age form 52.8 p.c. of the criminal population who commit indictable offences but they comprise less than 19.7 p.c. of the total population 16 years of age or over. As this age group includes some of the most daring offenders who already may be experienced criminals as well as first offenders likely to be turned from crime by further education and training, it seems worth while to give consideration to offenders in this group as distinct from offenders in the older age groups.

Of the young offenders in 1959, 59.3 p.c. were still under 20 years of age; of those under 20 years of age 73.1 p.c. were tried in three provinces—Ontario 35.8 p.c., Quebec 24 p.c. and British Columbia 13.3 p.c.

In 1959, seven of the 16 men found guilty of murder, 29 of the 96 convicted of manslaughter and 20 of the 44 found guilty of rape were under 25 years of age; 68.4 p.c. of the men convicted of breaking and entering, extortion and robbery were in that group as well as 55.2 p.c. of those found guilty of offences against property without violence (which include all thefts), 60.2 p.c. of those who maliciously damaged property, 54.7 p.c. of those found carrying offensive weapons and 64.5 p.c. of the prison escapees.

There were 2,115 female offenders in 1959, 872 of them under 25 years of age; 468 of the young offenders were guilty of theft and having in possession. Of the 178 women convicted under the Opium and Narcotic Drug Act, 72 were in the young adult group as were 39 of the 85 convicted of forgery and uttering; all of the 16 female prison escapees were also young women.

[1] Includes abortion, indecent assault on female, sexual intercourse and attempt, incest, procuring, rape, attempted rape and seduction. [2] Includes causing death in the operation of a motor vehicle or otherwise.

The sentences meted out to these young people vary somewhat from those given to offenders over 24 years of age. Usually a higher proportion of them are given suspended sentences, put on probation or sent to reformatories and a lower proportion fined or given gaol sentences.

13.—Disposition of Sentences for Indictable Offences, by Sex, 1958 and 1959

Disposition of Sentences	1958				1959			
	16-24 Years		25 Years or Over		16-24 Years		25 Years or Over	
	M.	F.	M.	F.	M.	F.	M.	F.
	No.	No.	No.	No.	No.	No.	No.	No.
Suspended sentence	2,541	173	1,518	261	1,904	171	1,302	254
Probation	2,906	233	1,044	142	3,570	266	916	159
Fine	3,160	144	5,173	457	2,832	150	3,405	452
Gaol	4,711	189	6,531	301	4,685	210	5,769	279
Reformatory	1,509	48	575	33	1,459	56	521	38
Penitentiary	1,266	17	1,562	36	1,093	19	1,505	61
Death	6	—	10	—	7	—	9	—

Through the system of suspended sentence and probation supervising, many young offenders receive another chance to make good, and reformatory training gives others an opportunity to better their employment possibilities. It is interesting to note that 24.2 p.c. of the young male offenders in 1959 were recorded as labourers, indicating that they had no particular skill by which to earn a living; the proportion of male offenders 25 years or over recorded as labourers was 16.6 p.c. Those recorded as students made up 10.1 p.c. of the youths, and 11.7 p.c. were reported as unemployed as compared with 5.2 p.c. of the older men. Approximately three of every four lived in urban centres.

Subsection 3.—Convictions for Summary Conviction Offences

Offences punishable on summary conviction—those not expressly made indictable—include all offences against the Criminal Code, provincial statutes and municipal by-laws. Summary conviction offences are triable by magistrate or justice of the peace under Part XXIV of the Criminal Code or under the provincial summary convictions Acts.

It is debatable how far summary conviction offences are of a criminal nature and whether their increase indicates an increase in crime. Many are breaches of municipal by-laws and contrary to public safety, health and comfort as, for example, parking violations or practising trades without licence, but they do not involve violence, cruelty or serious dishonesty. On the other hand, offences as serious as cruelty to animals and contributing to juvenile delinquency are included under this classification and such indictable offences as common assault and driving with ability impaired may be tried on summary conviction.

Summary convictions increased by 1.6 p.c. from 2,508,976 in 1958 to 2,548,909 in 1959. Increases were shown in Nova Scotia, Quebec, Manitoba, Saskatchewan, Alberta and British Columbia.

14.—Convictions for Summary Conviction Offences, by Province, 1950-59

NOTE.—Figures for the years ended Sept. 30, 1900-49 are given in the corresponding table of previous Year Books beginning with the 1933 edition.

[1] For the 12 months ended Sept. 30, 1950; statistics for October-December 1950 are given in DBS report *Statistics of Criminal and Other Offences* (Catalogue No. 85-201).

In considering statistics of summary convictions it should be remembered that such convictions are greatly influenced by the customs of the people and by the application and degree of enforcement of municipal regulations. These differ from place to place and from year to year and affect summary conviction offences more than they do indictable offences.

In 1959 increases appeared in convictions under the Criminal Code, federal statutes, and municipal by-laws. Convictions for breaches of parking regulations under provincial statutes and municipal by-laws rose by 4.7 p.c.

15.—Convictions for Summary Conviction Offences, by Type, 1958 and 1959

Type of Offence	1958	1959	Increase or Decrease 1958-59
	No.	No.	p.c.
Criminal Code	**72,421**	**74,716**	**+ 3.2**
Attempts, conspiracies, accessories, counselling	127	77	−39.4
Attempt to commit suicide	267	189	−29.2
Bawdy house	689	527	−23.5
Causing disturbance by being drunk	2,686	2,849	+ 6.1
Common assault	6,382	5,874	− 8.0
Communicating venereal disease	98	47	−52.0

[1] See footnote to Table 14, p. 318.

For the year 1959, Ontario, with 39.3 p.c. of the registrations of motor vehicles in Canada, had 52.9 p.c. of the total convictions for breaches of traffic regulations; Quebec in the same year had 20.7 p.c. of the registered vehicles and 24.7 p.c. of the convictions. In interpreting the figures in this way, however, it should be pointed out that traffic regulations are by no means uniform throughout Canada and no account is taken of the differences in the degree of urbanization in the provinces. These two provinces have large urban centres but in provinces with lower degrees of urbanization, such as the Atlantic Provinces, Saskatchewan and Alberta, convictions are lower when considered in proportion to the number of motor vehicles registered.

Convictions for Drunkenness and Offences against the Liquor Acts.—In considering these convictions it should be noted that the same person may and often does appear before the courts on such charges more than once within a year and that the number of convictions may thus be well above the number of persons convicted.

17.—Convictions for Drunkenness, by Province, 1950-59

[1] See footnote to Table 14, p. 318.

There is general interest in the relation of alcoholism to crime but, when examining statistics to support the assumption that some crimes are associated with the consumption of liquor, it should be observed that accurate interpretation would necessitate allowance for population variables such as age and sex distribution and other classifications according to social and economic status, etc.

[1] See footnote to Table 14, p. 318.

Convictions of Females.—The number of convictions against females for summary conviction offences was greater in 1959 than in 1958 by 1.9 p.c. Newfoundland, Saskatchewan, Ontario and Alberta recorded decreases of 36.5 p.c., 23.3 p.c., 7.8 p.c. and 0.4 p.c., respectively. Traffic offences were the cause of 85.8 p.c. of all summary convictions against women in 1959; such convictions rose by 0.8 p.c. as compared with 1958.

19.—Convictions of Females for Summary Conviction Offences, by Province, 1955-59

Section 3.—Juvenile Delinquents

The Juvenile Delinquents Act defines a child as "any boy or girl apparently or actually under the age of 16 years". Provision is made, however, by which the Governor General in Council may proclaim that in a province the definition of a child be a "person under the age of 18 years". This has been done in British Columbia, Manitoba and Quebec. Newfoundland considers a juvenile to be a girl or a boy under 17 years of age. For uniformity the figures relating to juveniles compiled by the Dominion Bureau of Statistics refer to the younger ages of under 16 years only and deal primarily with cases disposed of by the courts.

The fact that juvenile court statistics furnish the most comprehensive figures collected on a country-wide basis makes it important that their possibilities and limitations be understood. This Section gives an account of juvenile delinquency in Canada from the viewpoint of legal action taken, for in the eyes of the law a *child is a delinquent only when he or she is adjudged before the court to have committed a delinquency.* To many people the term 'juvenile delinquent' has a broader interpretation but that adopted in this Section does not include those boys and girls whose misdemeanours have not been reported to the courts nor those given the necessary advice and aid by their parents, their school, the police or a child care agency. Moreover it does not include those cases that are handled unofficially by the court, where the judge or probation officer makes an adjustment without filing a legal record of the offence. There is a growing tendency toward following this practice and thus keeping children's names from court records.

These statistics represent cases of delinquency reported to the courts, from the most trivial infractions to the most serious—that of murder. The number of cases brought before the courts is influenced by such factors as personnel and facilities of the court, community interest in and understanding of the function of a juvenile court, and by variations in the policies of the courts in the disposition of cases. As more courts are established the additional returns may exaggerate an apparent increase in delinquency or may underestimate a decrease. In some communities the juvenile court is the only available agency to provide services to children; in others there are well established agencies serving children, of which the juvenile court is only one.

It should be noted, too, that the total figures do not represent the actual number of children charged and found guilty but rather tend to exaggerate them, for a child referred to the court more than once during a year for different delinquencies is counted as a different case each time (see p. 330). Neither do the figures represent the number of delinquencies committed by delinquents because when a child is charged with more than one delinquency at a hearing only the most serious delinquency is counted.

Reports of juvenile delinquents were received in 1959 from 143 of the 169 judicial districts. Nine of these had no cases to report. Separate reports were received in 1959 from 195 incorporated urban centres of 4,000 or more population.

Juveniles brought before the Courts.—The number of juveniles brought before the courts in 1959 was 13,329, an increase of 1.5 p.c. over 1958. Saskatchewan and Prince Edward Island showed the greatest percentage increases among the provinces.

22.—Juveniles brought before the Courts, by Province, 1955-59

[1] Newfoundland included from 1951.

Children Adjudged Delinquent.—Over a period of ten years it has been found that between 80 and 90 p.c. of the children brought before the courts each year have been adjudged delinquent. The number of delinquents in 1959 was 11,686, an increase of 2.6 p.c. over 1958. The major increases in 1959 were shown in British Columbia and Quebec.

[1] Includes 956 cases in 1958 and 35 cases in 1959 "adjourned *sine die*", compiled for statistical purposes as juvenile delinquents.

Delinquencies.—Of all complaints against boys resulting in court appearance in 1959, 80.9 p.c. were under the Criminal Code, 4.5 p.c. under federal statutes, 8.9 p.c. under provincial statutes and 5.7 p.c. under municipal by-laws. Of the 8,418 delinquent boys' cases under the Criminal Code, 50.6 p.c. were for thieving and having in possession, 27.9 p.c. for breaking and entering and robbery and 11 p.c. for wilful acts in respect of certain property. Only 3 p.c. of the boys were guilty of delinquencies against the person and 46.8 p.c. of these, of common assault.

Of the girls' cases resulting in court appearance, 40.6 p.c. were under the Criminal Code, 41.2 p.c. under federal statutes, 15.8 p.c. under provincial statutes and 2.4 p.c. under municipal by-laws. Of the 494 girls' committals under the Criminal Code, 53 p.c. were adjudged to be delinquent for theft and having in possession. There were 551 girls found guilty under federal statutes. Incorrigibility and sexual immorality accounted, respectively, for 59.3 p.c. and 31.2 p.c. of them.

Totals	**7,025**	**8,985**	**9,679**	**11,391**	**11,686**

Sex and Age.—Juvenile delinquents are predominantly boys. The proportion for all offences in 1959 was approximately one girl to eight boys, a ratio that has remained much the same over a long period. Juveniles of 13 to 15 years of age comprised the majority of delinquents in 1959—75.5 p.c. of the boys and 88.3 p.c. of the girls. However, 307 boys and 16 girls (2.8 p.c. of the children) were under 10 years of age.

27.—Percentages of Delinquent Boys and Girls, by Age Group, 1958 and 1959

Age Group	1958			1959		
	Boys	Girls	Both Sexes	Boys	Girls	Both Sexes
	p.c.	p.c.	p.c.	p.c.	p.c.	p.c.
7 - 12 years	23.0	11.6	21.7	24.0	11.2	22.6
13 - 15 years	76.7	88.1	78.0	75.5	88.3	76.9
Not given	0.3	0.3	0.3	0.5	0.5	0.5
Totals	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**

Education and Employment.—Many causes contribute to backwardness in school work. The retarding influence may be illness, over-crowding in the home, disturbed family situations or dull mentality. Presuming that six years is the usual age for entering the first grade, 44.5 p.c. of the boys and girls in 1959 were reported to be two or more years below the normal grade for their age and 3.2 p.c. of the boys and girls were a year or more above it.

Nearly three-fifths (55.6 p.c.) of the boys and 44.5 p.c. of the girls had attained grade 7 at the time of delinquency. The majority of boys and girls who had left school had reached grades 6 to 9. Some high school education had been achieved by 20.0 p.c. of the boys and girls.

JUVENILE DELINQUENTS BY SCHOOL GRADES

In 1959, 11.5 p.c. of the delinquent boys and 15.9 p.c. of the delinquent girls were not attending school. At the time of leaving school their ages ranged from 9 to 15 years, the majority being 14 to 15 years. Of the delinquent boys who had left school, 33.9 p.c. were unemployed. The largest group of wage earners (91) were in occupations concerned with transportation, such as messengers, helpers on milk delivery routes, truck drivers' assistants, etc. More than half of the girls were idle after leaving school. Factory work and domestic and personal services were the main occupations of those employed.

Birthplaces of Juvenile Delinquents and their Parents.—Canada was the country of birth of 89.7 p.c. of the juvenile delinquents in 1959 (the place of birth was not recorded in 3.4 p.c. of the cases); 6.8 p.c. were born in the British Isles, Europe, the United States, and Asia. Ontario was the province of residence of 46.9 p.c. of those born outside Canada.

Both parents of 75.0 p.c. of the delinquent children in 1959 were born in Canada and another 10.9 p.c. had one parent born in this country. To evaluate these figures, comparison should be made of the population ratio of children from 7 to 15 years of age whose parents were Canadian-born with those whose parents were born elsewhere.

Home Circumstances.—The type of home in which he lives and the amount and quality of supervision he receives are important factors in a child's behaviour. The statistics of the marital status of the parents and the place and type of residence of the child reflect home conditions and are worth recording as possible reasons for social or emotional maladjustment. The parents of 76.7 p.c. of the delinquent children were reported to be living together in 1959 but a home broken by separated parents, divorce or death was the background of 18.9 p.c. of the delinquent boys and girls. The mothers of 13.0 p.c. of the juvenile delinquents were employed other than in the home and the mothers of another 2.1 p.c. were dead. The fathers in 6.1 p.c. of the cases were deceased. Of every five juveniles who appeared in court, four were urban residents; 90.3 p.c. were living in their own homes at the time they got into difficulties; 3.6 p.c. of them were in foster homes, with either a relative or some other person; and institutions were the homes of 1.8 p.c. of them.

Sources of Complaint.—The police were the complainants in the majority of juvenile cases, 84.3 p.c. of the boys having been charged by them. Probation officers and parents were responsible for 4.6 p.c. and 2.0 p.c., respectively, of those charged. School authorities referred 1.7 p.c. of the boys to the courts and social agencies another 0.5 p.c.

The proportion (61.4 p.c.) of girls charged by the police was considerably less than the proportion of boys so charged. Parents made more use of the courts for girls than for boys (17.5 p.c.). School authorities laid complaints in 3.6 p.c., probation officers in 8.0 p.c. and social agencies in 3.6 p.c. of the girls' cases.

Disposition of Cases.—In 1959, 45.1 p.c. of the children's cases were heard within four days of the charge and 61.4 p.c. within nine days. However, 9 p.c. of them had to wait at least two weeks and 9.6 p.c. waited one month or more before the first hearing. These waiting periods may be explained in various ways.

Some county courts sit only twice or even once a month. Hearings may be deferred because of sickness in the family, school examinations, stormy weather or long distances. The chief cause for delay, however, is the time it takes to investigate the facts properly. The probation officer, and frequently there is only one to a court, has to find out what occurred at the time of the delinquency; he must get in touch with the parents and the school, learn something of the home situation, perhaps arrange medical or psychiatric examinations and explore community resources. The disadvantage of a long waiting period is outweighed by the assistance the court receives in deciding the form of treatment best suited to the child's needs and the type of care that will be the most economical for the community. For these intervening days or weeks most children are left in their own homes while a minority are placed in detention homes and, in the long run, whether the effect of the waiting period is good or bad is determined by the care given the youngster during that time.

Juvenile court judges heard 95.9 p.c. and magistrates 4.0 p.c. of the juvenile cases before the courts. The remainder were heard by justices of the peace. The proportion of those declared delinquent (97.6 p.c.) in the magistrates' courts was greater than in the juvenile courts (87.3 p.c.). In the former courts, 1.9 p.c. of the cases were dismissed while in the juvenile courts only 2.8 p.c. were dismissed but 9.9 p.c. were adjourned *sine die*.

Some courts consider children whose hearings are adjourned *sine die* as delinquent while others do not; for the purpose of uniformity, the latter point of view is maintained by the Dominion Bureau of Statistics. In assessing the total problem of juvenile delinquency, however, cases adjourned *sine die* have to be taken into account for, when the proportion of cases dealt with in this way increases, the proportion of those declared delinquent declines.

Sentences for delinquent boys usually differ somewhat from those for girls. In 1959 the proportion of boys put on probation was 56.1 p.c. and of girls 57.0 p.c. Fines or restitution were meted out to 16.8 p.c. of the boys but to only 4.6 p.c. of the girls. This is because damage to property, for which restitution seems a reasonable adjustment, is committed relatively more often by boys than by girls. A much larger proportion of the girls (28.1 p.c.) than the boys (12.7 p.c.) were sent to training schools. Final disposition of case was postponed for 8.3 p.c. of the girls and for 12.2 p.c. of the boys.

[1] Newfoundland included from 1951.

Actual Number of Delinquent Children.—As stated in the introduction to this Section, the figures in the foregoing tables do not represent the actual number of children charged and found guilty, since a child referred to the court more than once in a year is counted as a separate case each time. Thus the 13,329 appearances before the court in 1959 (Table **22**), which resulted in 11,686 delinquencies (Table **24**), involved 10,443 children. Of these 10,443 children, 9,443 were found delinquent on one occasion during the year, as shown in Table **31**, but 1,515 of these 9,443 were reported as having been found delinquent one or more times in previous years.

Section 4.—Penal Institutions and Training Schools

Penal institutions may be classified under three headings: (1) penitentiaries, where prisoners have long sentences and the turnover is slow; (2) reformatories, where the turnover is also rather slow; and (3) common gaols, where the turnover is extremely rapid.

If the average of the figures for inmates at the beginning and at the end of the year be considered the average population for the year, and the number of discharged as the turnover, the turnover in the years 1958 and 1959 was: in penitentiaries, 64 and 56 p.c.; in reformatories, 352 and 317 p.c.; and in gaols, no less than 1,927 and 1,792 p.c., respectively.

Subsection 1.—Penitentiaries*

The penitentiaries of Canada are administered by the Commissioner of Penitentiaries, responsible directly to the Minister of Justice. The system comprises the following permanent penitentiary institutions:—

(1) Six primary institutions, which receive inmates sentenced by the courts to imprisonment for terms of two years up to life, are located at New Westminster, B.C., Prince Albert, Sask., Stony Mountain, Man., Kingston, Ont., St. Vincent de Paul, Que., and Dorchester, N.B. Persons sentenced to penitentiary terms in Newfoundland are cared for in the provincially operated institution at St. John's, Nfld., under financial arrangements authorized by Sect. 82 of the Penitentiary Act.

(2) Five secondary institutions, to which inmates are transferred from the primary receiving institutions on the basis of their suitability for special forms of treatment, including vocational training. Two of these (the Federal Training Centre and the Leclerc Institution) are in close proximity to St. Vincent de Paul Penitentiary in the Montreal area. Collin's Bay Penitentiary and the Joyceville Institution are within a few miles of Kingston. The Prison for Women, to which female inmates are transferred upon committal to penitentiary in any part of Canada except Newfoundland, is adjacent to Kingston Penitentiary.

Three semi-permanent satellite institutions, at William Head, B.C., Valleyfield, Que., and Springhill, N.S., are operated as minimum-security extensions of the primary institutions in their respective areas. A Penitentiary Staff College is operated at Kingston, Ont., for the training of groups of Penitentiary Officers from all institutions through the media of regular and special courses and conferences.

During the year ended Mar. 31, 1960, the average daily population of the penitentiaries was 6,141 and the total net cash outlay for maintenance was $12,786,603 or $5.70 per inmate per day.

In 1958, the Minister of Justice appointed a Correctional Planning Committee for the purpose of considering ways in which a more effective and more fully integrated Canadian correctional system could be achieved. The basic principles contained in the report of the Planning Committee are now being implemented.

A new building has been constructed at the Prison for Women at Kingston to improve the facilities for segregation of inmates, to enable the introduction of training courses in homemaking and commercial subjects and to provide additional facilities for recreational and cultural purposes.

There has been a significant increase in the number of professional and technical staff members employed in the penitentiaries for the purpose of diagnostic study and improved classification and segregation of inmates. It is vitally necessary that conditions of over-crowding in major penitentiary institutions be relieved as quickly as possible and that those inmates who are most susceptible to reformative treatment be cared for under medium or minimum security conditions wherever it is practicable to do so. During the fiscal year 1961–62, it is intended to establish five Penitentiary Farm Camps adjacent to existing maximum-security institutions and to construct an equal number of Correctional Work Camps at points where useful projects may be undertaken on behalf of federal or provincial governments which would not otherwise be attempted within a period of at least ten years. A study has been made of the administrative methods used in the penitentiaries and at the Head Office and, as a result, a reorganization of the staffs has been effected. Intensive training courses are being conducted at the Penitentiary Staff College for the purpose of developing the executive capabilities of those officers who will be called upon to carry positions of senior responsibility in a rapidly developing service.

---

The National Parole System.*—The progressive correctional system now in operation in Canada places emphasis on reformation rather than on punishment alone for the sake of retribution to society. It is quite obvious from past experience and from the high rate of recidivism among criminals that punishing a person for wrong-doing merely by depriving him of his freedom is not effective in turning that person from crime. It is therefore considered imperative that during his period of incarceration every possible means be taken to reform the inmate through treatment and training and through assistance with his personal problems. Not only is it desirable that the individual be given such assistance and returned to freedom as a useful citizen but it is also undoubtedly preferable for society generally that he be saved from the further resentment and bitterness that would result from imprisonment without assistance. The only way the public can be properly protected is by reforming the offender. Thus the treatment and training program in the institution is a vital part of the whole correctional process and parole is an extension of that training outside the institution.

In January 1959, the National Parole Board, consisting of a chairman and four members, was formed and given absolute jurisdiction over all matters of parole. It operates under authority of the Parole Act (SC 1958, c. 38) which came into force on Feb. 15, 1959, replacing the former Ticket-of-Leave Act administered by the Remission Service of the Department of Justice. A fifth member was appointed on Oct. 1, 1960. The Board has taken over the Remission Service, and the staff of the Board, numbering 100 persons, is known as the National Parole Service.

The basic purpose of parole is to reform and rehabilitate the offender and the function of the National Parole Board is to select those inmates in the various federal and provincial penal institutions who indicate that they sincerely intend to reform, and to assist them in doing so by grant of parole. The Board is not a reviewing authority and is not concerned with the propriety of conviction or the length of sentence but only with the problem of deciding, in each case it considers, whether or not there is a reasonable chance of reformation. Parole should not be confused with clemency and is not granted on humanitarian grounds alone. It is not a matter of shortening sentence, although it has the effect of shortening the time a man spends in gaol. Parole means that an inmate is allowed to serve the remainder of his sentence at large in society but under certain restrictions that will ensure his leading a law-abiding life. These restrictions are designed for the protection of the public and for his own welfare.

The decision of the Board is based on reports it receives from the police, from the trial judge or magistrate and from various people at the institution who deal with the inmate. Reports are also obtained from a psychologist or psychiatrist, when available. Where necessary a community investigation is conducted to secure as much information as possible about the man's family and background, his work record, and his position in the community. From all these reports, an assessment is made to determine whether or not he has changed his attitude and is likely to lead a law-abiding life. An inmate need not obtain the services of a lawyer to apply for parole. He may apply by sending a letter to the Board and is assisted in preparing such application at the institution, or another person may apply on his behalf. The Board automatically reviews all sentences of over two years. As soon as an application is received, a file is opened and investigation begun, the results of which are presented to the Board for decision. All applications and reports are processed by the Parole Board staff at Ottawa. In addition to the headquarters staff, there are nine Regional Officers stationed across the country. They interview all applicants for parole to give them an opportunity of making verbal representations to a representative of the Board. The Regional Officers also submit to the Board a report of the interview and their assessment of the inmate's suitability for parole. These Regional Officers have authority over the parolees in their various areas, and also give information and counsel to all inmates regarding possibility of parole and preparation for it.

---

* Prepared by T. G. Street, Chairman, National Parole Board, Ottawa.

A person on parole is under the care of a supervisor, usually an after-care agency worker or a probation officer, who reports to the Regional Officer. If he violates the conditions of his parole or commits further offence or misbehaves in any manner, the Board may revoke his parole and return him to the institution to serve that part of his sentence outstanding at the time his parole was granted.

The inmate coming out of an institution faces many problems in regaining his place in society. He is assisted as much as possible by the members of the Parole Service, the after-care agencies and the provincial probation officers. But the success of the parole system depends on the public's understanding of the purpose of parole and its sympathy toward the problems of the ex-inmate. If he is unable to get a job or form new associations because of his past, the chances of his being rehabilitated are remote. However, with the increasing efficiency of the system, with greater co-operation and understanding among all people involved in the correction system and with the public generally, recidivism in Canada should be lessened and some of the problems of criminality solved.

In the first 22 months of operation (to Nov. 30, 1960), the Parole Board reviewed 8,690 applications and granted 3,898 paroles. During the same period, the Board revoked 248 paroles, which is a failure rate of about 6 p.c. related to the number of paroles granted.

Subsection 2.—Reformatories and Other Corrective Institutions

The latest information on reformatories and corrective institutions is that made available by the 1951 Census. Summary data only are given here.

As of June 1, 1951, there were 13 reformative and corrective institutions, four of which were for women. Enumeration cards were completed for 2,551 men and 141 women on June 1, 1951. In these institutions for adults 29 p.c. of the inmates were under 21 years of age at the time of admission and almost 50 p.c. were between the ages of 21 and 39 years. The proportion of single men was 63 p.c. and three out of four of the men whose residence was known lived in urban centres. More than one-half of the women (53.2 p.c.) were single and the majority (91.0 p.c.) of those whose residence was known lived in urban centres. From five to eight years of elementary school education were recorded for about one-half of the male and female inmates. Only 6.7 p.c. of the men were unemployed at the time of admission. On the other hand, 20.6 p.c. of the women were unemployed and another 34.0 p.c. had never worked.

The revenue for the support of the institutions for men was derived chiefly from provincial funds (56.0 p.c.) and from the sale by the institutions of farm and industrial products (41.3 p.c.). To support the institutions for women, income was received from provincial funds (31.0 p.c.), municipalities (1.8 p.c.), sale of products (53.4 p.c.), donations and bequests (4.6 p.c.) and other sources (9.2 p.c.).

Summary statistics of inmates, movement of population, terms of sentence and penal record of inmates are given in the 1954 Year Book, pp. 311-313.

Subsection 3.—Training Schools

Reports on movement of population are received yearly from training schools and figures compiled therefrom are shown in Table **35** for the years 1955 to 1959.

35.—Movement of Population in Training Schools, Years Ended Mar. 31, 1955-59

[1] The discrepancy between pupils in residence at end of year 1955 and those in residence at beginning of 1956 comes from closing of St. Patrick's Home, Halifax, N.S.

[2] The discrepancy between pupils in residence at end of year 1957 and those in residence at beginning of 1958, comes from the inclusion of 98 pupils in Good Shepherd Home, Edmonton, Alta.

[3] The discrepancy of 12 pupils comes from the omission of Girls' Home and Training School, St. John's, Nfld.; this institution did not forward a return in 1958.

[4] The discrepancy comes from the exclusion of 54 students in Ste. Agnes' and Ste. Helene's Schools in Quebec.

More detailed information on training schools is collected at each decennial census. Statistics compiled from the Census of 1951 are summarized in the 1954 Year Book, pp. 314-316.

Section 5.—Police Forces

The Police Forces operating in Canada are organized under three groups: (1) the Federal Force, which is the Royal Canadian Mounted Police whose operations cover a very wide field in addition to purely police work; (2) Provincial Police Forces—the Provinces of Ontario and Quebec have organized their own Provincial Forces, but the other provinces engage the services of the Royal Canadian Mounted Police to perform parallel functions within their boundaries; (3) Municipal Police—every urban centre of reasonable size has its own police organization which is paid for by the local taxpayers and which attends to police matters within its borders.

Municipal police statistics are at present undergoing revision and are therefore not carried in this edition of the Year Book.

Subsection 1.—The Royal Canadian Mounted Police

The Royal Canadian Mounted Police is a civil force maintained by the Federal Government and was established in 1873 as the North-West Mounted Police for service in what was then the North-West Territories. In recognition of its services, it was granted the use of the prefix "Royal" by King Edward VII in 1904. Its sphere of operations was expanded in 1918 to include all of Canada west of Port Arthur and Fort William and in 1920 it absorbed the Dominion Police, its headquarters was transferred from Regina to Ottawa and its title was changed to Royal Canadian Mounted Police.

The Force is under the control of the Minister of Justice and is headed by a Commissioner who holds the rank and status of a Deputy Minister. Officers are commissioned by the Crown and are selected from the non-commissioned ranks. The Force has complete jurisdiction in the enforcement of the federal statutes. By arrangement between the federal and provincial governments it enforces the provincial statutes and the Criminal Code in all provinces exclusive of Ontario and Quebec and under special agreement it polices some 119 municipalities. It is the sole police force in the Yukon and Northwest Territories, where it also performs various administrative duties on behalf of certain departments of the Federal Government. It maintains liaison officers in London and Washington and represents Canada in the International Criminal Police Organization which has headquarters in Paris.

Of the Force's 17 divisions, 12 are actively engaged in the work of law enforcement, as are some 40 subdivisions and 638 detachments. The five remaining divisions are "Headquarters", "Depot" and "N", which are maintained as training centres, and "Marine" and "Air", which support the operations of the land divisions. A teletype system links the widespread divisional headquarters with the administrative centre at Ottawa and a network of fixed and mobile radio units operates within the province. Focal point of the Force's criminal identification work is the Headquarters Identification Branch; its services, together with those of the 39 divisional and subdivisional units and the three Crime Detection Laboratories, are available to police forces throughout Canada. The Force operates the Canadian Police College at which Force members and selected representatives of other Canadian and foreign police forces may study the latest advances in the fields of crime prevention and detection.

The uniform strength of the Force at Mar. 31, 1960, was 5,540, at which time it maintained some 1,598 motor vehicles, 16 aircraft, 72 ships and boats, 269 sleigh dogs, 31 police service dogs and 222 horses.

Subsection 2.—Provincial Police Forces*

Quebec Provincial Police Force.—This Force is responsible for upholding law and order over the whole territory of the province, from the provincial boundary between Ontario and Quebec to the Magdalen Islands in the Gulf of St. Lawrence. The Force is composed of about 1,600 men under the orders of a Director, who is responsible to the Attorney General of the province.

To facilitate operations, the territory is divided into two almost equal parts designated as the District of Montreal and the District of Quebec. The Director has his office in Montreal, with a Deputy Director in Quebec City. There is an Assistant to the Director in Montreal and one in Quebec.

Working under the Assistant Directors for the Montreal and Quebec Districts are the following: an Inspector General; an Inspector (Detective Branch); an Inspector (Traffic Branch); and an Inspector (Constabulary). Each of these three sections (Detective, Traffic, Constabulary) is under a captain supported by a number of lieutenants and sergeants.

There are 40 Outpost Detachments in the Montreal District and 18 in the Quebec District.

Ontario Provincial Police.—The Ontario Provincial Police Force is maintained by the Ontario Government and administered by the Attorney-General's Department. It is responsible for law enforcement in the rural and unorganized parts of the province and in certain municipalities by contract. The development of the Force from its beginning in the early years of Confederation to the passing of the Police Act in 1946 is outlined in the 1950 Year Book, pp. 332-333.

---

* Revised by Geo. A. Shea, O.B.E., Secretary-Treasurer, Canadian Association of Chiefs of Police, Montreal.

The Force, with a strength of approximately 1,860 in 1960, consists of a General Headquarters at Toronto and 17 District Headquarters at Chatham, London, Dundas, Niagara Falls, Toronto, Mount Forest, Barrie, Peterborough, Belleville, Perth, Cornwall, North Bay, Sudbury, Sault Ste. Marie, Timmins, Port Arthur and Kenora. Each District has detachments adequate to meet local law-enforcement requirements. A Criminal Investigations Branch, under the command of an Assistant Commissioner, is maintained at Toronto to handle crimes of a major nature.

The Force operates one of the largest frequency-modulation radio networks in the world, which is a most efficient method of combatting every type of lawlessness. The network includes 71 fixed stations and 609 radio-equipped mobile units including five boats operating on Lake Temagami, Lake Simcoe, Lake Nipissing, Lake of the Woods and Georgian Bay.

In 1960, the Ontario Provincial Police Force policed 50 municipalities which requested this service under the provisions of the Police Act.

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

PART I.—FORMAL EDUCATION*

Section 1.—Education in the Provinces and Territories

Education in Canada has been moulded according to certain principles and practices which should be appreciated if the present education system is to be understood. First, on entering the Canadian federation, each province retained responsibility for exercising control of formal education within its own borders, a right as jealously guarded today as at that time. Second, there has been a division of responsibility since then between the provincial departments of education and the local boards which operate under provincial school law and school regulations. Third, the Canadian people believe in education for all youth, as evidenced by the fact that much effort has been directed toward equalizing educational opportunity from elementary through secondary and higher education. Fourth, it is also recognized by Canadians that a high general education level on a broad front is necessary to safeguard their democratic way of life, to appreciate and exploit their natural resources to the full, and to assume their responsibilities in international fields.

Interest of the Federal Government in Education.—The Federal Government retains responsibility for the education of Indians and Eskimos, other children in the territories outside the provinces, inmates of penitentiaries and members of the Armed Forces and their families living on military stations or overseas, although provincial educational facilities are utilized whenever possible.

---

* Information supplied by the Education Division, Dominion Bureau of Statistics.

Education of Indian children in Canada is a function of the Indian Affairs Branch of the Department of Citizenship and Immigration. Residential schools are provided for orphans, children from broken homes, and children of isolated families. Day schools are available for children living in communities and, where conditions are favourable, Indian children attend non-Indian schools. In addition, vocational and professional training is provided for Indian youths. (See also pp. 172-173.)

The provision of educational facilities for the nomadic Eskimo population, a responsibility of the Northern Administration Branch of the Department of Northern Affairs and National Resources, is a more difficult problem. There are now about 50 schools established throughout the vast Northwest Territories at points scattered from the Mackenzie Delta to northern Quebec. Some of these are operated by religious missions assisted by government grants. All northerners attend the same schools, which range from the larger school at Yellowknife where a variety of vocational courses is given and where students may qualify for university entrance, to single classroom units in remote Eskimo settlements. Vocational training is considered so important for the Eskimo young people in certain areas that specially chosen groups are sent south to secure training in trades in which they may later find employment in their own communities. (See also p. 175.)

Federal interest in education is also shown through grants to vocational education; grants to universities and colleges; grants for research and construction through the Canada Council; grants-in-aid for equipment and personnel to education institutions through the National Research Council, the Defence Research Board, the Department of National Health and Welfare and several other agencies of government. The Federal Government also assists formal and informal education at various levels through programs or materials provided by the National Film Board, the Canadian Broadcasting Corporation, the Department of National Health and Welfare, the Department of Agriculture, and so on.

Administration and Organization of Education in the Provinces.—Because each of the ten provinces has the authority and responsibility for organizing its own system of education, with the legislature being responsible to the electorate for its decisions, there are in existence ten distinct provincial systems with differing policies, organizations and practices. Even so, in some respects a great deal of similarity has developed among the systems as a result of interchange of personnel and ideas, ease of transportation and communication, interprovincial and national education bodies, proximity, co-operation and emulation. Each province has established a department of education and, except in Quebec, each has a Cabinet Minister as Minister of Education. The Quebec department is administered by a Superintendent of Education—a non-political appointee—who maintains liaison with the Cabinet through the Minister of the Department of Youth; he is head of the Council of Education, composed of Roman Catholic and Protestant Committees which sit separately, each being responsible for the organization and discipline of its own public schools and teacher-training institutions, for conducting examinations for school inspectors, and for making recommendations to the Cabinet concerning school grants and certain specified appointments.

The provincial departments of education assist local boards in providing elementary and secondary schools and, in some cases, establish schools in isolated areas. In addition, they generally either establish schools for deaf and blind persons or make provision elsewhere for their education and also provide for the education of other atypical pupils. Teacher-training is conducted in provincial establishments or by arrangement with one or more universities, and trade schools or institutes are established by provincial departments where deemed expedient.

Local School Organization.—Publicly elected or appointed municipal school boards function as corporations under the school Acts and regulations and are held responsible to the provincial government and resident ratepayers for the operation of schools. Through such delegation of responsibility, publicly controlled education has become a provincial-local partnership with the degree of decentralization varying somewhat from province to province and from time to time. For example, matters concerning control of the curriculum, supervision and contributions of revenue to the boards are, and will continue to be, recurrent problems. Local boards may be elected, appointed or partly elected and partly appointed. They differ in number of members—usually three members for one-room rural districts but as many as five, seven or even twelve or more for urban units. Where larger units in rural areas have been established there are central boards for the unit representing the component districts, although there may be local boards which retain some custodial and advisory duties.

The larger unit, replacing rural districts which were usually about four miles in extent, was introduced by legislation in several provinces and made optional in others in an effort to provide better school facilities and greater equalization and to mitigate the problems caused by a chronic shortage of teachers. Larger units have been established by legislation in Alberta and British Columbia and by Acts with provision for local option in Saskatchewan and the Maritime Provinces. Southern Ontario has been gradually organizing its rural areas into township and county units; Manitoba has recently introduced legislation whereby communities will find it beneficial to form larger secondary units; and Protestant Quebec has been essentially organized into larger units. In Catholic Quebec one board of commissioners administers all Roman Catholic schools in a school municipality, whether rural or urban, and secondary education is being consolidated more and more into larger central secondary schools. In that province there have always been more private residential schools established by religious groups than elsewhere. In addition, the fact that Quebec has more than 100 vocational and agricultural schools has lessened the need for the composite type of school.

Larger units vary in organization. In some provinces the rural sections are formed into units of perhaps 80 or more rural schools; in others the towns and villages are included in the units, or may be included if they so desire; in still others secondary schools only are consolidated in the larger units. Usually each unit board is advised by a superintendent who maintains liaison with the department of education, and where units are headed by a professional educator there is a trend toward delegating more professional responsibilities to the unit board. In several provinces there remains the problem of making school administrative units and municipal units conterminous.

Each department of education, among its duties, undertakes to provide for the selection, training and certification of teacher candidates; to establish courses of study and prescribe school texts; to provide inspection services and liaison between the local boards and the department; to assist in financing the schools through grants and services; and to make rules and regulations for the guidance of trustees and teachers. In return, regular reports are required from the teachers and the districts.

The first government grants were based on such factors as number of teachers, enrolment, days in session and attendance. Later, special grants were introduced in most provinces to meet a variety of expenses such as the erection of the first school and other construction, the organization of special classes, transportation for pupils, and school lunches. More recently, most provinces have made some provision for equalization grants and several have introduced a basic grant for operation supplemented by a limited number of special grants.

The public school system normally provides 12 or 13 years or grades, depending on the province. Common patterns for elementary and secondary levels are 8-4 or 8-5, 6-3-3 or 6-3-4, or 7-5. The trend is toward six elementary years with six or seven years of secondary schooling, following the practice of doing away with the one-room rural units through consolidation and the consolidation of small high schools. The generally accepted age of entrance to regular classes is now six years, although there has been an increased demand for kindergarten and nursery schools that has not been satisfied in many areas because of pressure for accommodation at the higher levels. Many private nursery schools and kindergartens have been established which have helped to ease the situation. The amount of supervision for these pre-school organizations varies widely from province to province but is usually minimal.

Parent-teacher and home and school organizations are numerous and active across Canada, giving community leadership in many areas connected with child instruction and welfare and working toward better schooling.

School Construction.—The development of larger school units and the consequent decrease in the number of one-room rural schools has more than balanced the increase in the number of new schools erected to accommodate increased enrolment. Thus the total number of elementary and secondary schools has been decreasing slightly for some years although pupil accommodation has greatly increased year by year. At the higher education level, increased enrolment has resulted in an unprecedented expansion of facilities as well as in an upgrading of colleges into universities and in the establishment of new institutions. Planners and designers of new school buildings have paid greater attention to functional architecture, to the use of modern light-weight materials and to equipment possibilities. Gone are basements, towers, expensive trim and waste space, but more expensive heating, plumbing and ventilation systems have been incorporated. Flexibility has been introduced through non-bearing interior walls, easily movable desks and other equipment. Well-organized, smartly tailored rooms are common, featuring acoustic and glazed tile, terrazzo flooring, metal partitions, suspended ceilings and fluorescent fixtures. Warm colours are used for north rooms, cool colours for sunny rooms and special rooms are designed for such courses as home economics, mechanics, music and chemistry.

Most of the universities have conducted financial campaigns for expansion at some time during the past ten years and indications are that many more such campaigns must be undertaken in the near future. Despite expansion and modernization, there are still some old and crowded buildings in use which contrast sharply with the new, well-planned, roomy, permanent structures on spacious campuses. All Canadian universities are expanding, whether they are located in the cramped heart of a city, have begun again in suburban areas, or were fortunate enough to have ample room on their first campus sites.

Special Education.—Each year increased provision is made for children who need special programs, particularly for those in the cities where numbers warrant such attention. There are in Canada six schools for the blind and nine schools for the deaf and in a number of centres classes are held for hard-of-hearing pupils and for those with poor vision. Other physically handicapped children for whom instruction is provided include cerebral-palsied, orthopaedic, and hospitalized and homebound tubercular and delicate children as well as the mentally retarded and emotionally disturbed. In addition to the special assistance given to the handicapped, a limited number of classes are conducted for mentally gifted children. Special educational services are also provided for the Indian and Eskimo nomads of Northern Canada and for isolated children such as those serviced by railway-car classrooms in northern Ontario and by bus classrooms in British Columbia.

Altogether, about 50,000 children are cared for in one or another of 110 special public schools, 590 classes, and 130 private schools, some of which receive government aid. About 2,000 teachers conduct these services.

Financing Education.—Slightly more than 3 p.c. of Canada's gross national expenditure, or $1,049,000,000, was expended on formal education during 1957. Almost 12 p.c. of all municipal, provincial and federal revenue went for education, with the municipalities providing 43 p.c. and the provinces 41 p.c. of the total. Municipal revenue is obtained mainly from direct taxes on land and improvements and from business taxes; provincial revenue is obtained from a variety of sources such as corporation taxes, sale of alcoholic beverages, tobacco, etc., licences, permits, etc., and from federal tax-rental agreements, and may also be secured through a special education tax of from 2 to 4 p.c. on sales.

Federal expenditures on education include sums for the education of Indians and Eskimos, and children of members of the Armed Services, war dead and veterans. They also include grants to the National Federation of Universities to be divided among the provinces on a per capita basis and then distributed among the universities of a province according to the number of regular full-time students enrolled. Other grants are provided, usually on a matching basis, to the provinces for vocational education; scholarships and grants-in-aid of research are awarded to universities and individuals by the National Research Council, the Defence Research Board, the Canada Council and various departments of government; and grants for libraries and student residences are awarded through the Canada Council.

The provincial departments of education make grants to all publicly controlled schools and are also financially responsible for an increasing number of services. Such services, as mentioned previously, include the establishment and maintenance of teacher-training colleges or assistance to universities for the provision of that training; the establishment and maintenance of technical institutes and trade schools; and the provision of correspondence courses.

Municipal governments must provide money for buildings and equipment, maintenance and other operating expenditures. They must raise, by direct taxes, the difference between the amounts budgeted for by the school boards and the grants received from the provincial government. Provincial grants account for from 79 p.c. of the total school-board revenue in Newfoundland to 30 p.c. in Manitoba and Quebec. Methods of payment vary. British Columbia, Nova Scotia and Manitoba no longer pay flat and incentive grants, but instead pay operation grants based on equalization formulas. Two other provinces—Newfoundland and Prince Edward Island—achieve a degree of equalization by paying the greater part of the cost of instruction. Ontario, Saskatchewan and Alberta make use of various flat and equalization grants, and New Brunswick and Quebec use flat and special grants. In addition, most provinces provide grants for capital expenditure, establish loan funds, and guarantee and assist in marketing debentures.

Private schools are normally supported from endowment income, gifts from religious or other sponsoring or operating bodies, and student fees. Universities and colleges receive about 19 p.c. of their current revenue from the Federal Government, 37 p.c. from provincial governments, 30 p.c. from fees, 4 p.c. from endowments and gifts, and 10 p.c. from various other sources.

Vocational and Technical Education.—There has been considerable growth in vocational and technical education during the past decade. Technical education is usually administered by the provincial departments of education. Across Canada approximately 210 provincial and municipal institutions give technical and trade training. Of these, 29 offer mainly post-secondary or advanced technical courses, about 100 are high schools and some 80 are trade schools.

Provincial trade schools and technical institutes are organized to complement the work of vocational high schools and train qualified tradesmen and technicians. Contributions of the Federal Government, usually on a sharing basis with the province, have been a matter of contributing to the economic efficiency of the people, having regard for employment and the economic development of the country. Grants are made according to agreement providing for assistance to appropriate provincial government authorities operating approved vocational training projects. These schools are also frequently assisted by industry, which may contribute financially, employ students for the summer, assist in shaping the course of study, and provide equipment. Some of these schools offer a wide range of courses such as engineering technology, radio, electronics, metal trades, stenography, computing devices operation, and apprenticeship in skilled trades.

Several other provincial departments of government offer specialized courses in such occupations as mining, forestry, fishery, agriculture, navigation and dairying. The Armed Forces train certain recruits for technical positions in the Services and assist others to take university courses through extension or otherwise.

Nursing education is provided in schools of nursing attached to the larger hospitals and advanced training is given in university hospitals. The training of nurses' aids or 'practical' nurses is carried on in some provinces.

Private trade schools, some offering correspondence courses only, conduct a wide variety of courses in fields ranging from hair styling to automotive engineering, and for occupations as dissimilar as artist, time-study engineer, and radio technician.

Adult Education.—Classes and courses for adults are conducted in all provinces and the territories, under private or public auspices. According to a survey of participants conducted in June 1960, about one adult in 25 was enrolled in some type of adult education course during the academic year 1959-60. Almost half of the total enrolment was in courses of a vocational nature (42 p.c.), a similar proportion was in general cultural and artistic fields, and the remainder in academic subjects for credit toward a high school diploma or university degree. In addition, universities and colleges, government agencies and private organizations sponsor public lectures, film showings, tours and performances of an educational nature for adults; in 1958-59 such programs drew an estimated attendance of several million. A considerable proportion of the productions of the Canadian Broadcasting Corporation provide educational experiences for adults in their own homes, and many educational films and filmstrips produced by the National Film Board reach adults through private and public showings.

Teachers and Teachers' Salaries.—Candidates for teaching certificates are generally required to have high school graduation or better, plus one year of professional training. Teacher training is given in provincial teacher-training colleges in courses lasting one school year or occasionally two, or in the universities where the training is usually combined with arts and science classes in a regular three-year or four-year university course. Secondary school teachers must have university graduation plus one year of professional training, or a special four-year university course in education.

In 1960-61 there were 126 normal schools and teachers' colleges preparing teachers, and 22 university faculties of education; together these institutions expected to graduate more than 17,000 teachers at the end of that school year. In 1959-60 there were 147,688 full-time teachers in the elementary and secondary schools and 7,550 in universities and colleges; about 73 p.c. were women and 38 p.c. of these were married. The majority were between 24 and 45 years of age.

Teachers are generally employed according to a local salary schedule, belong to a provincial superannuation scheme and are members of a professional organization.

Research in Education.—The wide variety of research at present being undertaken in the field of education is expanding in scope and increasing in variety of method, and involves large numbers of personnel. Among the types found are historic and other studies, surveys, projects in applied research including action research, and a limited amount of basic or pure research. Most of the pure research is conducted in the universities by individuals or teams of professors and graduate students and the same personnel may conduct applied research. Applied research is also conducted by such organizations as the Canadian Education Association, the Canadian Teachers' Federation, the Education Division of the Dominion Bureau of Statistics, l'Association canadienne des Éducateurs de Langue française, the Industrial Foundation on Education, the Canadian Universities Foundation, etc. In addition, certain of the departments of education and city school boards have research officers who, for the most part, conduct research into curricula examinations, promotion policies, use of visual aids, and related problems.

Operation or action research which developed during the Second World War has been adapted to many fields including education and is aimed at carrying out a certain operation as well as possible with the means available. Administrators and others are making considerable use of such procedure but it is difficult to decide just when such action should be designated as research.

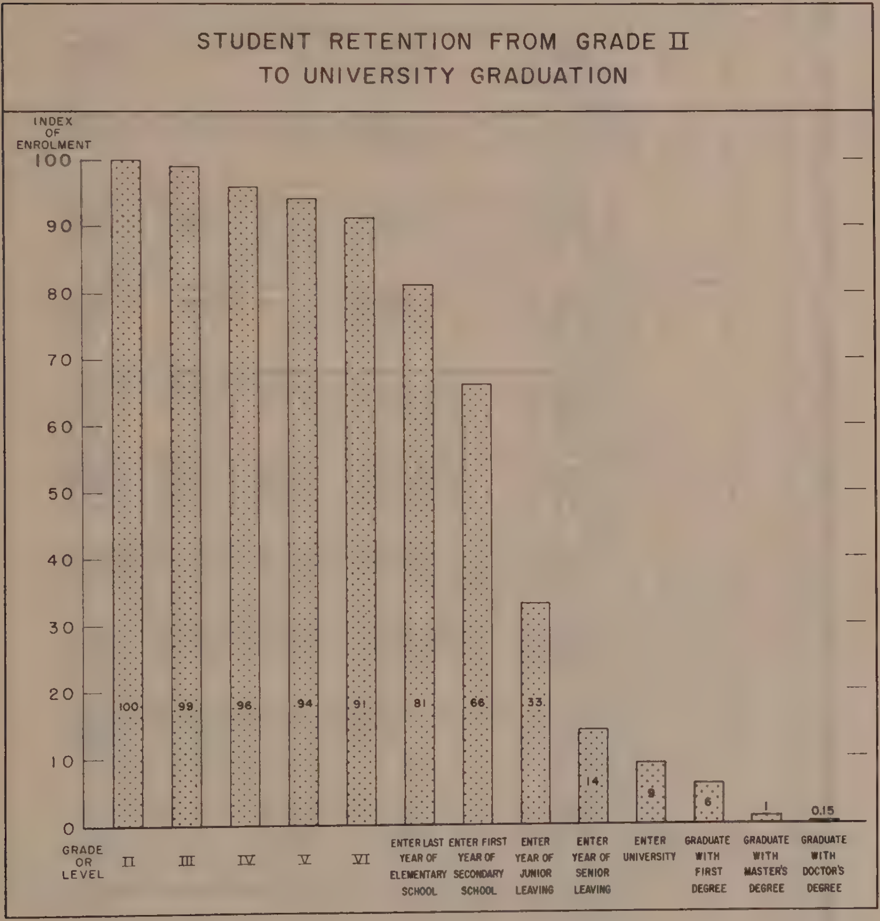
One of the most promising portents for the future of research in education is the formation of provincial or regional councils to provide co-ordination of effort, to ensure professional advice, to publicize research findings, and to encourage research into imminent problems. Three such councils are well organized and publish journals. Several national bodies interested in research in education have formed a National Advisory Council on Educational Research which has provided liaison among its constituent bodies and is considering expanding its efforts through publications and advisory services.

During the past decade there have been several provincial Royal Commissions appointed to inquire into education as a whole, or into some phase of it. Many of these have made use of research techniques as well as submissions received from interested bodies and individuals.

A number of longitudinal studies covering secondary pupils in one or several provinces are assessing the utilization of student resources related to university graduation. Other extensive studies have been related or are related to school administration, visual aids and school finance. In addition, a limited amount of institutional research is being undertaken by several universities.

Section 2.—Statistics of Schools, Universities and Colleges

Education institutions may be grouped in the following categories: publicly controlled schools, privately controlled schools, universities and colleges, and federal schools. The publicly controlled schools, by far the largest group, include, in addition to all publicly controlled elementary and secondary schools, vocational institutes and trade schools, teacher-training colleges, correspondence courses, and schools for the blind and deaf. Private schools may be academic, business or trade schools, or correspondence schools. The universities and colleges may be provincial institutions, church institutions, or independent. The federal schools include those for Indians, schools in the Northwest Territories and schools overseas for children of members of the Armed Forces or for Armed Forces personnel. Evening courses may be given by public schools, usually assisted by provincial grants, by private schools, by universities or colleges, or by other organizations.



STUDENT RETENTION FROM GRADE II TO UNIVERSITY GRADUATION

Table 1 shows the number of schools, teachers and pupils for all types of education institutions classified by province, for the academic year 1958-59. In all types of schools, the number of pupils has been increasing. The increase was first noticed at the elementary level some six years after the birth rate began to rise during the war years. About eight years later the children born during the War were entering high school and four years later they began entering university. The number of teachers is rather closely related to the number of students although the trend is toward larger classes. On the other hand, the number of schools has remained fairly constant, the increase caused by the construction of new and larger schools in urban areas being counterbalanced by the closing of many one-room rural schools.

---

[1] Day, residential and hospital schools administered by the Federal Government. [2] One school reported; data included with Nova Scotia. [3] Exclusive of classical colleges and normal schools where secondary education is given. [4] Also included with "Higher Education". [5] Estimate. [6] Includes indentured apprentices taking full-time, part-time and correspondence courses. [7] Included under "Trade Courses (Pre-employment)" are 675 apprentices in March 1960 and 614 in September 1960. [8] Also included with "Public and Separate—Pupils". [9] Included with Nova Scotia. [10] Includes enrolment of 16,684 in classes and courses operated by Federal Government departments.

An attempt has been made to tabulate total expenditure on education, including formal education at all levels, vocational training of all types and also expenditure on cultural activities related to education such as adult night classes, fine arts and handicraft courses, and libraries, museums and art galleries. Such expenditure for the year 1957 is presented in Table 2, classified by source. Details of income of school boards for publicly controlled elementary and secondary schools for the years 1955-57 are given at pp. 354-355 and financial statistics for universities and colleges at pp. 358-360.

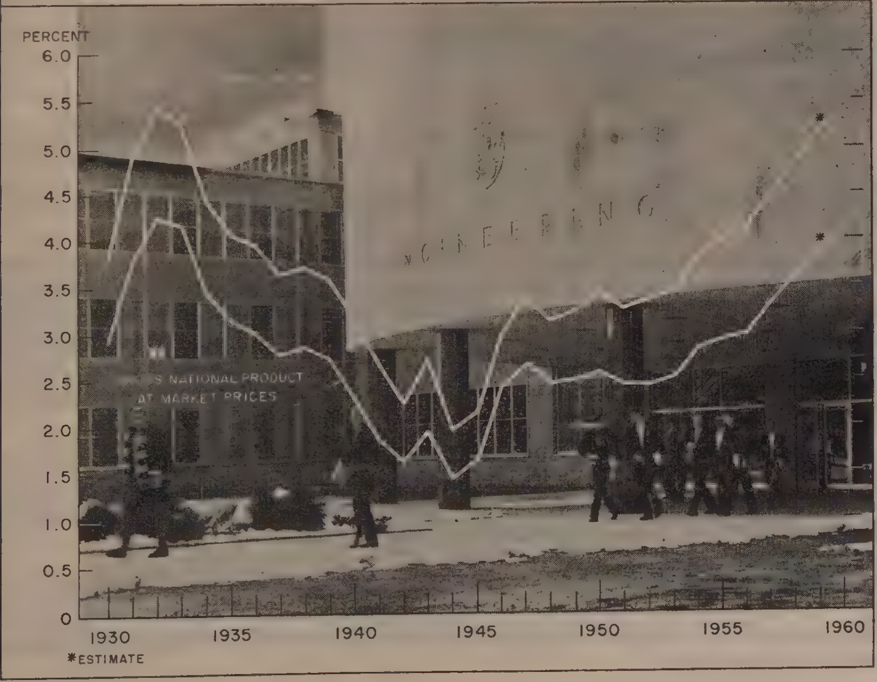
[1] Includes fees paid by Federal Government for Indians and Eskimos in public and private schools and in schools for blind and deaf, and for correspondence courses. [2] Includes $4,754,000 held in trust for Quebec universities. [3] Limited to reported expenditures of public funds. [4] Included in "Elementary and Secondary—Public schools".

TOTAL EXPENDITURE ON EDUCATION AND VOCATIONAL TRAINING AS A PERCENTAGE OF TOTAL PERSONAL INCOME AND GROSS NATIONAL PRODUCT AT MARKET PRICES



Subsection 1.—Elementary and Secondary Schools

Control.—Direct control and operation of public schools is by school boards, which operate under school laws and regulations, and the members of which are elected or appointed usually for terms of two or three years. As stated on p. 340, through amalgamations and consolidations, schools are now operated by boards of larger units, local boards within larger units, independent boards for rural schools, towns or cities, and some by official trustees appointed by the province in lieu of a board. As their designations imply, private schools and federal schools are administered by private organizations and federal authorities, respectively.

Table 3 gives the number of active public school boards in each province in the school year ended in 1960 and indicates the type of board, the number of official trustees and the number of board members elected or appointed to these boards.

3.—Active School Boards and School Trustees, by Province, School Year 1959-60

[1] Estimated. [2] Boards of Education, members of Toronto Metropolitan Board. [3] Ten school districts are under an official trustee or trustees. [4] In addition, five school districts are under an official trustee or trustees.

Enrolment.—Total enrolment in publicly controlled day schools increased from 1,092,633 in 1901 to 2,264,106 in 1931, but dropped during the 1930's and the early 1940's, when the birth rate was low, to 2,060,718 in 1944. After 1944 it rose slowly for some years and then at an accelerated rate to reach 3,813,711 in 1960. From 1954 to 1960 enrolment advanced by 950,000 for the country as a whole though the increase varied from province to province, ranging from 19 p.c. for Prince Edward Island and Saskatchewan to 42 p.c. for Ontario and 45 p.c. for British Columbia.

Enrolment in private elementary and secondary schools accounted for 4 p.c. of the total enrolment in these schools. The number of private school pupils, which was 100,000 in 1950 and 1952, rose rather sharply to a peak of 151,141 in 1956, dropped slightly to 150,476 in 1957, but increased to 165,295 by 1960.

Table 4 shows enrolment of all elementary and secondary pupils in the provinces and territories and in Department of National Defence schools overseas, and classifies them by grade. It also shows the numbers attending private and Indian schools in each province and territory.

4.—Enrolment in Publicly Controlled and Private Schools, by Grade, School Year 1959-60

[1] Enrolment of the only private school reported for Newfoundland included with Nova Scotia.

[2] Pupils in federal Indian schools.

[3] Includes Ungava District of Quebec.

[4] Total for the Yukon 2,293 pupils.

Teaching Staffs.—Between the school years ended in 1940 and 1960 the number of teachers in the publicly controlled schools in the ten provinces increased 89 p.c. from 78,017 to 147,688. The number of men teachers increased 98 p.c. and the number of women teachers 86 p.c.

In 1960, in the nine provinces outside of Quebec, 78.4 p.c. of the teachers had at least senior matriculation and one year of professional training, and an additional 11.9 p.c. had one year less schooling. Median experience in the eight provinces outside of Ontario and Quebec has slowly increased from 6.8 years in 1940 to 8.5 years in 1960, despite the large numbers of new teachers each year. Many of these have been recruited by the cities, where the median experience has declined from a high of 15.1 years in 1940 to 10.4 years in 1958 and 9.8 years in 1960.

Between 1940 and 1960, median salaries for all teachers in the nine provinces other than Quebec increased from $865 to $4,055, while that for teachers in one-room schools increased from $632 to $2,912. The annual rate of increase in the median, beginning with a modest 2 p.c. in 1945, accelerated year by year to reach 6 p.c. in 1954, decreased slightly to 5 p.c. in 1958 and then increased to 8 p.c. in 1959.

[1] Fully qualified at the elementary level are teachers with junior matriculation and two or more years, or senior matriculation and one or more years of professional training. At the secondary level they are teachers with junior matriculation and four or more years, or senior matriculation and three or more years of schooling, of which one year was professional training. All teachers in Quebec were considered as fully qualified if they had a minimum of two years of training after junior matriculation. Thus, the Quebec data are not comparable with the data for the other provinces. [2] Comprises teachers and principals instructing or supervising kindergarten and elementary grades only, and those instructing or supervising both elementary and secondary grades in rural schools with five or fewer classes. Teachers and principals in Ontario are classified as elementary according to the provincial *Report of the Minister, 1958*. [3] Comprises teachers and principals instructing or supervising secondary grades only, and those instructing or supervising both elementary and secondary grades in urban centres and in rural schools with six or more classes. Teachers and principals in Ontario are classified as secondary according to the provincial *Report of the Minister, 1958*.

Financial Support.—The public elementary and secondary schools are financed almost wholly from provincial grants and money derived from local taxation. Fees for elementary schooling may be charged in Quebec. In a few of the other provinces nominal fees are charged for the higher secondary grades; in Newfoundland there is little local taxation and fees are generally charged.

In general, school boards submit their budgets to the local municipal councils which levy for and collect the required amounts. However, school boards in Quebec and a few in other provinces have the power to levy and collect taxes for school purposes. Assessment, on which taxes for school purposes are levied, is the total valuation of land and buildings, and sometimes improvements, personal property or business income are included. Steps have been taken by several provinces to equalize real property assessment over large areas or even over the whole province.

Each province has its own method of apportioning funds to local school boards. Grants are of two types. (1) The basic grant may be calculated on a minimum cost determined by an amount per classroom, salary and qualifications of the teacher, average attendance, etc. All provinces make some attempt to equalize educational opportunity through basing grants in part on some indication of need. (2) Special grants are paid to assist with transportation, music, arts and crafts, special classes, equipment, building costs, night classes, etc. These are largest in Quebec where there is marked emphasis on training for home industries, arts and crafts.

Newfoundland schools are supported largely from provincial funds. Tuition fees may be charged by school boards and by the boards of the colleges (actually schools of fairly high standard giving elementary and high school instruction) in the city of St. John's; additional fees may be charged for fuel or janitor service where these are not provided by pupils or their families. There has been no local taxation until very recently and it now exists only in a few of the larger centres. The provincial government pays teachers according to experience and qualifications and some school boards supplement this amount. The province also makes annual grants for plant maintenance and repairs and for new construction.

Table 6 presents a comparative statement of the finances of school boards operating publicly controlled schools, in so far as this information is available.

6.—Income of School Boards of Publicly Controlled Elementary and Secondary Schools, by Province, Fiscal Years Ended 1955-57

NOTE.—The receipts shown in this table do not include any amounts raised by loans or the sale of bonds or debentures as all revenue of this nature must be repaid ultimately with money raised by local taxation. Figures from 1914 are given in the corresponding table of previous Year Books beginning with the 1936 edition.

Subsection 2.—Universities and Colleges

Institutions.—At the beginning of the 1958-59 academic year there were in Canada 339 institutions of higher education offering one or more years of degree-credit courses. Table 7 gives their distribution by province. Of the total, 292 were under the control of religious bodies (225 Catholic), 23 under provincial government control, three under Federal Government control, and 21 under private non-denominational control. At the beginning of the 1960-61 academic year there were probably over 350 institutions in all. Detailed information is not yet available for that year.

7.—Number of Institutions of Higher Education, by Province, Academic Year 1958-59

Alberta	1	1	8	10
British Columbia	2	1	5	8
Totals	**18**	**37**	**284**	**339**

Enrolment.—Full-time university-grade enrolment continued at a record high in 1960-61. Preliminary figures show 114,000 such students in attendance. Indications are that enrolments may well be double the 1960-61 figure in about 10 years. Table 8 gives figures on enrolment, by province, for the academic years ended 1958-61.

8.—Full-Time Regular Winter Session University-Grade Enrolment, by Province, Academic Years Ended 1958-61

NOTE.—Figures are for enrolment at Dec. 1 of the academic year indicated and comprise actual graduate enrolment reported, and estimated figures for total enrolment based on data available from institutions representing about 98 p.c. of the total enrolment.

[1] All theology enrolment included as undergraduate.

Foreign enrolment has risen considerably since the end of World War II, with a larger proportion of students from countries other than the United States and the United Kingdom coming to Canadian institutions, as shown in Table 9. In 1958–59 about one of every 16 full-time university students in Canada was a resident of a country other than Canada. Hong Kong, Trinidad and the United Kingdom each accounted for over 500 students while France, India and Jamaica contributed from 100 to 300 each. Just over 100 other countries or territories were represented in the figures.

9.—Students from Other Countries in Canadian Universities, and Canadian Students in Universities in the United States and the United Kingdom, Selected Academic Years Ended 1931-59.

[1] Includes 23 ungraded professors not distributed above.

Finances.—Since 1952, grants from federal, provincial and municipal governments to a group of institutions representing about 80 p.c. of the total full-time university-grade enrolments have exceeded half of the total current income, less ancillary enterprises. Table **13** gives a historical series of the finances of this group of institutions. The institutions omitted are mainly those conducted by religious orders where teachers receive little or no salary and for which financial returns are consequently not comparable.

13.—Current Income and Expenditure of Universities and Colleges, Academic Years Ended 1948-57

NOTE.—Up to 1953 institutions included represent about 80 p.c. of the total full-time university-grade enrolment. For the years 1954-57 figures given are an estimate of the total current revenue and expenditure of universities and colleges.

Academic Year Ended—	Current Income					Total Current Expenditure

[1] Board and lodging not included.

The Federal Government established a system of university grants for current operating purposes, the first of which were paid during the academic year ended 1952. The grants were paid on the basis of 50 cents per head of population in each province, the eligible institutions receiving their shares of the total provincial allotment according to the number of full-time students at university level attending degree or graduate diploma courses. For 1956-57 and 1957-58 the payment was $1 per head of population and in 1958-59 it was increased to $1.50 per head. It should be noted that the Province of Quebec did not accept payment for the years 1952-53 to 1955-56. For 1956-57 and subsequent years, payments refused by Quebec were held in trust by the Canadian Universities Foundation. In 1957-58, one Quebec institution accepted the grant, in 1958-59 two accepted and in 1959-60 all eligible institutions in that province accepted. However, in 1960-61, the Quebec Government reached a tax-sharing agreement with the Federal Government whereby Quebec would make its own grants; 1960-61 data for Quebec are therefore not included in Table **14**, which gives a distribution of payments by province for the academic years ended 1959-61.

14.—Federal Government University Grants, by Province, Academic Years Ended 1959-61

NOTE.—Figures for 1952-55 are given in the 1959 Year Book, pp. 356-357 and those for 1956-58 in the 1960 edition, p. 397.

During the 1956–57 academic year, plans were announced by the Federal Government for the distribution of $50,000,000 to Canadian universities and colleges for new construction and capital equipment projects. The grants are made in an amount not exceeding 50 p.c. of the cost of specific building or capital equipment projects, with appropriate regard to the population of each province. The University Capital Grants Fund is administered by the Canada Council, which came into existence on Mar. 28, 1957. Up to Mar. 31, 1960, 41 institutions had been awarded a total of $22,202,073 in capital grants, of which they had received $11,793,545. The Council was also endowed with an additional $50,000,000 for the provision of scholarships and other assistance in the fields of the arts, humanities and social sciences. (See pp. 366–368.)

PART II.—CULTURAL ACTIVITIES RELATED TO EDUCATION

Section 1.—Art and Education*

Fine Art Schools, Galleries and Organizations.—Fine art appears as an elective subject of the faculty of arts in a number of universities, where it may be taken as one of five, six or more subjects for a year or two. In Mount Allison University, N.B., and in the Universities of Saskatchewan and Manitoba, there is a sufficient number of courses to allow the taking of a Bachelor degree with specialization in fine art. At the University of Toronto an Honour B.A. in art history and archaeology is offered, as well as graduate work in this field. Departments of fine art were opened by McGill University in 1948-49, by the University of British Columbia in 1949-50 and by the University of Alberta in 1953-54; McMaster University reopened its department in 1951.

---

* Revised under the direction of the Director of the National Gallery of Canada, Ottawa.

There are also schools of art not requiring any fixed academic standing for admission, as they are more concerned with the technical development of the artist. The most widely known of these are:—

Nova Scotia College of Art, Halifax, N.S.
École des Beaux-Arts, Quebec, Que.
École des Beaux-Arts, Montreal, Que.
School of Art and Design, Montreal Museum of Fine Arts, Montreal, Que.
Ontario College of Art, Toronto, Ont.
University of Manitoba School of Art, Winnipeg, Man.
School of Art, Regina College, Regina, Sask.
Provincial Institute of Technology and Art, Banff School of Fine Arts, Banff, Alta.
  (affiliated with the University of Alberta, Edmonton)
Vancouver School of Art, Vancouver, B.C.

Courses in these schools vary in length with the requirements of the individual student but may extend over as many as four years. Summer schools of art are sponsored by some of the foregoing institutions, by universities, and by various independent groups.

Public art galleries in the principal cities perform valuable educational services among adults and children. Children's Saturday classes, conducted tours for school pupils and adults, radio talks, lectures and often concerts are features of the programs of the various galleries. Many of these institutions supply their surrounding areas with travelling exhibitions, and organizations such as the Maritime Art Association, the Western Canada Art Circuit, the Art Institute of Ontario and the Queen's Art Circuit have been founded to carry on the work on a regional basis. The National Gallery of Canada has a nation-wide program of this nature.

The principal art galleries are:—

Beaverbrook Art Gallery, Fredericton, N.B.
Montreal Museum of Fine Arts, Montreal, Que.
National Gallery of Canada, Ottawa, Ont.
Public Library and Art Museum, London, Ont.
Art Gallery of Toronto, Toronto, Ont.
Art Gallery of Hamilton, Hamilton, Ont.
Winnipeg Art Gallery, Winnipeg, Man.
Norman Mackenzie Art Gallery, Regina, Sask.
Edmonton Art Gallery, Edmonton, Alta.
Calgary Allied Arts Centre, Calgary, Alta.
Vancouver Art Gallery, Vancouver, B.C.
Art Gallery of Greater Victoria, Victoria, B.C.

Other Art Organizations.—The leading art organizations of national scope, exclusive of museums and art galleries, include the following:—

Association of Canadian Industrial Designers
Canadian Arts Council
Canadian Group of Painters
Canadian Guild of Potters
Canadian Handicrafts Guild
Canadian Museums Association
Canadian Society of Graphic Art
Canadian Society of Painter-Etchers and Engravers
Canadian Society of Painters in Water Colour
Canadian Society of Landscape Architects and Townplanners
Community Planning Association of Canada
Federation of Canadian Artists
Royal Canadian Academy of Arts
Royal Architectural Institute of Canada
Sculptors Society of Canada.

The National Gallery of Canada.—The National Gallery was founded in 1880 by the Marquis of Lorne, then Governor General of Canada, and at first served only as an exhibition gallery. In 1907 it was provided with an Advisory Arts Council and in 1913 was first incorporated under a Board of Trustees. Since then it has assembled a permanent collection of pictures and sculpture, prints and drawings, representing the styles, past and present, of various parts of the world, intended for the enjoyment of the public and the improvement of arts and industrial products, and to form the basis of a program of art education. The National Gallery Act, amended in 1951, gave the institution a larger Board of Trustees and other advantages.

The collection of the National Gallery today is of international repute and is accessible to the whole country by means of catalogues, photographs, colour reproductions and, to a limited extent, by loans. The Canadian section, naturally the most inclusive, is the best available source for the study of Canadian art. Each year, examples of the best contemporary work are added, along with those of earlier periods.

The Gallery conducts a nation-wide program of extension. It has prepared about 45 special exhibitions, the majority of which are available to the entire country and are widely circulated. As many as 200 separate showings have been held annually. In addition, individual loans of material from the collection are made to centres in many parts of the country each year. In this way original works of art are constantly being brought to the attention of the public. Sets of reproductions are also sent on tour of localities that have not the facilities for handling originals. Under the auspices of the Gallery, internationally known authorities lecture across Canada.

The Gallery also provides special educational services. The Education Officer regularly conducts informal lectures and guided tours to the collections—a monthly average of 80 groups request such tours and lectures. Other educational services include exhibitions of reproductions and photographs accompanied by didactic texts and the production of filmstrips on Canadian artists. The Gallery maintains a collection of films and filmstrips on art. Information concerning recent purchases, exhibitions and lecture tours arranged by the Gallery are contained in the *Annual Report of the Board of Trustees* and facsimile colour reproductions available to the public are listed in leaflets procurable on request.

The National Gallery is now housed in the new Lorne Building located in central Ottawa, easily accessible to residents and visitors.

Section 2.—Museums and Education

Modern museums, in Canada and elsewhere, are breaking away from the old concept of repositories and are assuming an important role as educational and cultural centres. Canadian museums of history and science offer many educational services to the public in addition to providing exhibits that are both interesting and informative. The following museums have staff members who are specifically charged with organizing programs in education and extension services:—

Nova Scotia Museum, Halifax, N.S.
McGill University Museum, Montreal, Que.
National Museum of Canada, Ottawa, Ont.
Royal Ontario Museum, Toronto, Ont.
Saskatchewan Museum of Natural History, Regina, Sask.

Other museums that conduct educational and extension programs using the regular curatorial and administrative staff are:—

The New Brunswick Museum, Saint John, N.B.
Museum of the Province of Quebec, Quebec, Que.
The Manitoba Museum, Winnipeg, Man.
Provincial Museum of Natural History and Anthropology, Victoria, B.C.

Direct work with schools may involve the holding of classes within the museum or visits of museum lecturers, with exhibits, to the schools. More informal are the guided tours for visiting school classes, the loan of specimens, slides, filmstrips or motion picture films to schools, and the training of student-teachers in the educational use of the museum. A number of museums have special programs for children, not directly associated with school work. These include Saturday lectures and film showings, activity groups, nature clubs, and field excursions.

For adults, museums offer series of lectures or film showings from autumn to spring, and possibly some special showings during the tourist season. Guided tours for adult groups are usually available throughout the year. Staff members may be sent to give lectures to service clubs, church groups, parent-teacher associations, and hobby clubs. The latter, such as naturalists' groups, mineral clubs and astronomy societies, may use the museum as their headquarters. Travelling exhibits are prepared for showing at local fairs, historical celebrations and conventions. At least seven Canadian museums have had regular radio or television programs, and others have made occasional contributions. Some historical museums have annual events during which the arts, crafts or industries represented by the exhibits are demonstrated to the public.

Through such activities and methods, Canadian museums serve as important adjuncts to the educational system and as centres for informal education, both juvenile and adult. Thus, they take their place with public libraries as major auxiliaries in the educational program of Canada.

Section 3.—The Educational and Cultural Functions of the Canadian Broadcasting Corporation

Many hours of educational or semi-educational programs are broadcast annually by the Canadian Broadcasting Corporation in English and in French. Whether these programs are directed to children or adults, entertainment is combined with information whenever possible. Spoken-word programs, presented as readings, talks, discussions, documentary programs, dramatizations or in forms combined with music, cover a very wide range of interests.

Pre-School Broadcasts.—A number of programs are planned for children from three-and-a-half to six years of age. The aim is to have these at the same time educational and entertaining. Both *Kindergarten of the Air* (radio) and *Nursery School Time* (television) base their planning on the advice of kindergarten and nursery school experts. The topics acquaint the child with new and interesting aspects of life about him in his home and in his community. *Kindergarten of the Air* has the added purpose of bringing the benefits of kindergarten training to those living in remote areas.

The English television network regularly carries the production *Chez Hélène* to introduce the French language to the pre-school child by means of the successful Tan-gau method of instruction. In another television series, *The Friendly Giant*, a highly popular story-telling program, is combined with an effort to develop in the child an awareness of social values.

School Broadcasts.—The CBC provides an active schedule of school broadcasts which are planned according to recommendations made to the School Broadcasts Department by a group of educators representing each of the provincial departments of education. This body is known as the National Advisory Council on School Broadcasting. The programs produced have the aim of enriching the curricula and of making it possible for the student to do things or see things which would be impossible in the classroom. For example, the radio dramatization of *Julius Caesar* for senior students assisted the schools in achieving a more vital appreciation of Shakespearean drama; the television series, *Where History Was Made*, transported the child by means of film to a historical site where he saw an important event in Canada's history re-created; a series on contemporary music showed the student how an artist is affected by the rhythm and mood of life around him.

Other Programs for Children.—Other programs are presented for children which do not relate to a specific school curriculum but have a broadly educational or informational purpose. The program *Junior Magazine* for children of nine to fourteen years of age has specific segments depicting Canadian life and the new world of science. Programs are devoted to musical concerts presented by young artists of talent and competence. For these programs, a CBC Youth Choir has been formed which also appears in instructional programs arranged by the School Broadcasts Department. On the French network, programs such as *Domino* and *Les Apprentis* were arranged to fulfil a purpose similar to that of *Junior Magazine.*

A number of experiments in programming for both the English and French networks have begun, such as the natural science program, *La vie qui bat,* which appears in English under the title, *This Living World.*

Adult Education.—Programs of an adult education nature are presented frequently by the CBC on its radio and television services, in the planning of which co-operation is received from various educational organizations. The CBC is an active participant in the work of the Joint Planning Commission, a body established by the Canadian Association for Adult Education for exchange of information and co-ordination of plans for adult education in Canada.

Citizens' Forum, a series telecast for the past five years, is a round-table program on which a panel of informed speakers who hold varying viewpoints discuss important issues of the day. It is arranged jointly by the Canadian Association for Adult Education and the CBC. Its French counterpart, *Les idées en marche,* has been planned in co-operation with La Société canadienne d'éducation des adultes. Similar types of programs are prepared specially for rural listeners, such as *National Farm Radio Forum,* which is arranged by the CBC in co-operation with the Canadian Federation of Agriculture and the Canadian Association for Adult Education. All these forum programs are heard by organized listening groups which continue the discussion of the topic at the conclusion of the program. *Le Réveil rural* on radio, and *Travaux et les jours* on television, are French-language counterparts of the English farm programs.

For the past nine summers the evening sessions of the Couchiching Conference have been broadcast. This week-long conference, organized jointly with the Canadian Institute on Public Affairs, examines Canadian and international affairs in open meetings and group discussions. On the French television and radio networks, annual sessions of L'Institut canadien des affaires publiques are broadcast. Other programs of an educational nature are *Soundings,* a series of radio documentaries dealing with community and social affairs; various dramatized series in the field of human relations and mental health; *Science Review,* which examines important discoveries in the field of the natural sciences and their branches; *Business Barometer,* designed to inform listeners of the developments in Canada's economic life; *Anthology,* a literary program with emphasis on Canadian writers; *Time for French,* a program designed to interest English-speaking listeners in the French language; *Trans-Canada Matinée,* a daily afternoon program including informative talks and commentaries designed specially for the woman in the home; *University of the Air,* a series varying from four to eight talks prepared and broadcast by distinguished professors in their particular fields; and, on the French radio network, *L'Université radiophonique internationale,* a series of talks exchanged with other countries on cultural and scientific subjects.

On the French network, *Les Chansons de la maison* presents a series of programs relating to parents and children, and general questions sent in by parents are answered by psychologists. For women listeners, the daytime program *Femina* is presented three times a week. The French network also broadcasts a number of weekly programs dealing with fine arts, music, literature, theatrical arts, sciences, religion and philosophy, under the auspices of Le Service des émissions éducatives et d'affaires publiques.

In addition to *Citizens' Forum*, programs carried regularly on both radio and television are *Encounter*, a series of interviews with people who are eminent in the arts and public life; and *Fighting Words*, in which guests who are experts in various fields discuss controversial quotations sent in by viewers. *Open House*, a daily television program for women, presents information on a wide variety of commodities and services, and interviews with people of note; its French network equivalent is *Bonjour Madame*. *Close-Up* and *Premier Plan* present weekly half-hour interview and documentary programs in which the emphasis is on the persons involved. Significant issues, events and ideas, both international and domestic, are considered each week on *Background*. *Explorations*, a series of drama documentaries which examines questions in the fields of sociology and history, was one of eleven CBC programs to win First Awards at the Exhibition of Educational Radio and Television Programs at Columbus, Ohio. *The Nature of Things* describes the attitudes and work of scientists and science for an audience whose only preparation may be curiosity about the world about them. Programs in the field of parent education and mental health are also broadcast. Portions of afternoon sessions of the Winter Conference of the Canadian Institute on Public Affairs are also telecast. This three-day weekend conference examines sociological questions in open meetings and group discussions.

Section 4.—The Educational and Cultural Functions of the National Film Board

The National Film Board, an agency of the Federal Government, was established by Act of Parliament in 1939 and reconstituted by the National Film Act in 1950. In the years since its establishment, the Board has grown from a supervisory body over Canadian Government motion picture activities to a national documentary film-producing and -distributing organization whose films about Canada are seen wherever people may freely assemble. The Board also produces and distributes filmstrips and still photos on Canadian themes in accordance with its primary function outlined in the Act "to initiate and promote the production and distribution of films in the national interest". Films are produced primarily in the English and French languages and, whenever possible, foreign language versions are prepared to increase the usefulness of Board films in foreign countries.

The 16mm. community film program in Canada is based on a nation-wide system of film circuits, film councils and libraries, strongly supported by organizations and individuals engaged in community activities. At present, there are more than 700 national, provincial and community film distribution outlets from which thousands of 16mm. prints are available for public use throughout the country. These prints are acquired for circulation by purchase or by loan from the Board.

More than one-half of the 16mm. community film audience recorded by the Board during 1960 was reached through classroom showings, indicating further progress in the development of audio-visual aid programs in Canadian schools and universities. Another noticeable trend was the more selective use of films by community organizations and groups for particular purposes. This is attributed in part to the availability of Board productions which present series of film studies related to central themes, and to the availability of a broad range of topics which include individual films particularly suited to group objectives and programs.

Films produced by the Board are shown in commercial theatres and on television in Canada and abroad. Films are released domestically in the series *Canada Carries On* (*En Avant Canada* and *Coup d'Oeil* in French), and newsreel features are also issued regularly for theatrical and television purposes. Distribution of theatrical subjects is arranged by contract with commercial distributing organizations.

An increasing proportion of the Board's production and distribution program is initially concerned with television at home and abroad. Series of original films are shown regularly over English and French language television networks in Canada. Individual films from the Board's extensive general library are available to CBC and privately operated stations. Abroad, because of expanding television facilities in many countries, Board films are seen by audiences which could not otherwise be reached.

In addition to commercial distribution through theatres and television in other countries, 16mm. print circulation is carried on through posts of the Departments of External Affairs and Trade and Commerce, through National Film Board territorial offices at London in England, New York and Chicago in the United States, New Delhi in India, and Buenos Aires in South America, as well as through libraries operated by various education agencies. Hundreds of prints of National Film Board films are also sold in other countries each year. Exchange agreements are in effect between the Board and government film-producing organizations in other lands; this means that films of various nations are freely exchanged with Canada, aiding better international understanding.

The National Film Board maintains a library of more than 150,000 still photographs, which are available at nominal cost to magazines, newspapers and other periodicals wishing to present current information about Canada.

Section 5.—The Canada Council

During the postwar years in Canada it was felt that it would be in the national interest to give encouragement to institutions expressing national feeling, promoting common understanding and adding to the variety and richness of Canadian life. The Royal Commission on National Development in the Arts, Letters and Sciences was accordingly appointed in 1949 to recommend the most effective means of supporting such institutions. The Commission reported that almost alone among the major nations of the world, Canada had no government-supported body to assist the arts, no executive body to deal with the question of Canada's cultural relations abroad, no clearing house or centre of information on the arts and no national commission for UNESCO.

As a result of recommendations made by the Massey Commission, the Canada Council was established in 1957 to promote the study and enjoyment of, and the production of works in the arts, humanities and social sciences. A sum of $100,000,000 from the public treasury was granted to the Council to enable it to carry out its program. Half of this sum was placed in a University Capital Grants Fund to assist institutions of higher learning to expand their building facilities in the arts, humanities and social sciences. The remaining $50,000,000 was set up as an Endowment Fund which provides a guaranteed annual income of about $2,700,000.

The Council is made up of 19 members appointed by the Prime Minister for terms of three years plus a Chairman and Vice-Chairman who are selected for five-year terms. Members are ineligible for reappointment during the 12 months following their second consecutive term on the Council. The organization must meet at least three times a year under its Chairman, Dr. Claude Bissell, and Vice-Chairman, the Very Reverend G.-H. Lévesque, to consider applications made to it by organizations and individuals across the country. The day-to-day administrative work is carried out by a permanent staff in Ottawa under the Director, Dr. A. W. Trueman, and Associate Director, Mr. Eugène Bussière.

University Capital Grants Fund.—One of the principal responsibilities of the Council is toward this country's institutions of higher education. It has been estimated that in the next decade university facilities will have to be about doubled. Of some 100 colleges polled by the National Conference of Canadian Universities and Colleges in 1959, only nine reported no immediate plans for expansion. The University Capital Grants Fund was established to help meet this need.

The Fund enables the Council to make grants to universities and other institutions of higher learning by way of capital assistance in respect of building projects, with the following limitations: (1) a grant for any one project may not exceed one-half the total expenditures made in respect of that project; (2) in any province the aggregate of the grants made may not exceed an amount that is in the same proportion to the aggregate amount credited to the University Capital Grants Fund as the population of the province (latest census) is to the aggregate population of the provinces in which there is a university or other similar institution of higher learning.

By the end of 1960, $22,000,000 had been authorized for payment by the Council. A total of 41 institutions had drawn upon the Fund for a wide variety of buildings with libraries, classrooms and residences claiming the major share. The decision to consider residences eligible for assistance was made after lengthy consultation with the universities themselves. It was generally felt that such buildings were more than mere boarding houses and constituted an integral part of the educational facilities of our universities.

Aid to Individuals.—It has been estimated that, to maintain academic standards at the present level, Canada will have to produce between 8,000 and 10,000 university teachers in the next ten years. In 1957, less than 10 p.c. of the graduate fellowships available in Canada were for studies in the humanities and social sciences. The Canada Council therefore allocated over $1,000,000 from the income of the Endowment Fund to the establishment of a scholarship and fellowship program to help remedy this situation. In three years more than 1,200 scholars have been aided through awards at the master's, doctorate and post-doctorate level. A further stimulus to academic pursuits is provided in other ways by the Council. Grants are made to universities to enable them to bring outstanding lecturers to their campuses. Travel grants are awarded to permit Canadians to attend international conferences and thus maintain contact with scholars from other countries.

Individual assistance is also given in the arts by the Council. By the end of 1960, about 360 scholarships had been awarded to enable singers, dancers, painters, writers and other creative artists to continue their studies or perfect their arts. Other artists had benefited from the Council's program of commission grants. Such grants enable theatres, orchestras, soloists, art galleries or museums to commission and perform or display original works by Canadian artists.

Aid to Organizations.—However, the Council's responsibility does not end with its assistance to the individual; the Council must also seek to create a wider market and a more receptive audience for the works of the country's creative talents. Accordingly, a large proportion of the revenue from the Endowment Fund is devoted to a program of assistance to organizations in the arts and letters. Since income from this source is strictly limited, the Council must decide whether it will support the best, which would involve a very large investment in some of the major population centres, or whether it will attempt to cover all areas of the country—a policy which, if carried to its full extent, would rapidly exhaust the funds available.

The Council has therefore sought to strike a balance between the two aims by combining grants for excellent service in local or regional areas with awards to enable organizations to travel to remote parts of the country where the arts are less readily available. It also seeks to ensure local support by insisting that organizations receiving Council grants find additional revenue from other sources. In the year ended Mar. 31, 1960, the Council gave about $1,250,000 to organizations in the arts, humanities and social sciences. Ten symphony orchestras received a total of $206,000 and a further $64,000 went to other musical organizations including choirs, string orchestras and chamber ensembles. More than $40,000 was spent to enable music groups to tour and $7,400 was awarded to permit the commissioning of new works. Over $350,000 was granted to promote the theatre, opera and ballet. The bulk of this, some $145,000, went to the National Ballet Company of Canada, the Royal Winnipeg Ballet and Les Grands Ballets Canadiens. A total of $72,000 went toward helping opera and $132,000 was awarded to the theatre. Festivals in Stratford, Vancouver and Montreal received $160,000 in assistance from the Council and a sum of $52,000 was allocated to the Canada Council Train and the Student Theatre Project, both activities designed to introduce more Canadian students to the best Shakespearean drama. The visual arts received about $143,000 and $43,000 was awarded in aid to publication, bringing to just over $1,000,000 the amount spent on the arts.

Considerably less assistance went to organizations in the humanities and social sciences since the bulk of the scholarship program is directed toward these subjects. Aid was given to visiting lecturers, to publications and to several academic projects. Altogether $123,000 was given for these purposes.

UNESCO.—The Act establishing the Canada Council also provided that the organization should undertake certain functions in relation to the United Nations Educational, Scientific and Cultural Organization. The Council accordingly established a National Commission for UNESCO with 26 members and approximately 30 organizations with "co-operating body status". The Council also provided the secretariat for the Commission. With the assistance of the National Commission, the Council is responsible for the co-ordination of UNESCO program activities in Canada, for Canadian participation in UNESCO program activities abroad, and for proposals for future UNESCO programs. In all these matters the Council works in close association with the Department of External Affairs and serves as the normal channel of communication between the Department and the Commission. In the fiscal year ended Mar. 31, 1960, the Council spent close to $35,000 in addition to indirect administrative expenses on the UNESCO program.

Section 6.—Library Services

The National Library.—The National Library of Canada, which came into existence on Jan. 1, 1953, is governed by an Advisory Council of 15 members, representing all provinces. The National Librarian and his staff are responsible for the cataloguing and expansion of a book collection; the publication of *Canadiana*, a monthly catalogue of new books and pamphlets relating to Canada; and the compilation and servicing of the National Union Catalogue.

In 1960, the book collection consisted of about 210,000 catalogued volumes and 115,000 micro-copies of early, rare, and out-of-print items. In addition, many volumes acquired from the Library of Parliament remain to be catalogued. Under the terms of the Book Deposit Regulations and the Copyright Act, 2,709 titles were received in 1959-60. Besides Canadian material, the library is specializing in the collection of publications in the fields of the humanities, music and the social sciences. Because the National Library is still in temporary quarters with a scarcity of space, the collection includes only books, pamphlets, official publications, and a very limited selection of periodicals. Eventually, it is expected that the Library will collect systematically and preserve the total output of the nation's publishers.

Canadiana published a total of 9,230 items in 1959, consisting of trade and general publications, and official publications of the federal and provincial governments. In January 1960, the *Canadiana* section of the National Library began a service to librarians, publishers and booksellers, consisting of a listing of all new Canadian imprints, with brief descriptions, to be published monthly in *Quill and Quire*, the magazine of the Canadian book trade. While these entries do not provide the bibliographical detail published later in *Canadiana*, they do supply useful, current information on Canadian publications.

The National Union Catalogue lists approximately 7,500,000 volumes in 159 important government, university and public libraries in all provinces. New accessions are reported regularly by the libraries and a systematic program of expansion provides for the addition of the contents of more libraries as facilities permit. During the year ended Mar. 31, 1960, the Reference Division was asked to locate 9,691 titles, and requests for other information brought the total number of inquiries to 10,711, as compared with 9,096 in 1958-59. Inquiries on scientific and technical subjects are in the lead, and 80 p.c. of the titles requested in 1959-60 were published since 1925.

Publications of the National Library, besides *Canadiana*, include the annual accumulation of the *Canadian Index to Periodicals and Documentary Films*, *Canadiana Selections*, and a *Bibliography of Canadian Bibliographies*.

Public Libraries.—Library service is provided for the Canadian public through several types of organization, depending on the population density of the area.

The majority of Canadians live in urban municipalities and are served by free tax-supported libraries, some with extensive branch systems. A few of the larger centres and many of the smaller municipalities are served by non-profit association public libraries, privately controlled and operated. A wide range of special services includes reference collections for business and industry, reading clubs, lecture series, art displays and services to schools which supplement the basic reference and circulation collections for children and adults in these larger centres.

A trend toward regional and co-operative library service is apparent as more effective forms of organization are sought to meet the library needs of both urban and rural populations. In 1959, 54 of the larger municipal public libraries reported extension of services beyond municipal boundaries, either by formal contract with neighbouring municipalities or by informal arrangement with non-residents. The establishment and growth of regional libraries in all provinces except Quebec is stimulated and encouraged by grants from provincial government agencies, and during the 1950's the number of regional libraries in Canada rose from 16 to 34. These libraries bring together the resources of a number of small communities within a specified area to provide funds, quarters, stock and staff of a higher standard than each could maintain by itself. Bookmobiles and other forms of mobile service bring skilled librarians and good books for children and adults to depots in schools and other convenient centres in the participating communities. The Public Library Commission of Quebec, set up in December 1959, is studying the library needs of the province with a view to regional organization and regional libraries are being planned for the Yukon and Northwest Territories.

Provincial public library services, operated on a province-wide basis by provincial government authorities, serve sparsely populated areas by bookmobile, rail, boat and aircraft. Travelling libraries, consisting of boxed collections of books for all ages, are sent out to small groups on request, books dealing with specific subjects are sent out to individuals on request and other forms of library service are tailored to the needs of certain areas.

All public libraries in Canada are experiencing increased demands for their services, especially from children of five to 14 years of age who, representing 20 p.c. of the population, borrowed 46 p.c. of all the books circulated in 1959. Stocks of books, pamphlets and periodicals are increasing, and new buildings, extensions and remodellings are being planned, although expansion is limited by a shortage of professional librarians.

DBS surveys of libraries for the year 1959 covered provincial public library services, regional and co-operative libraries and public libraries in centres with over 10,000 population. The data thus secured were supplemented by information from provincial officials on libraries in smaller centres. Table 1 represents estimates for all public libraries in Canada.

1.—Summary Statistics for All Public Libraries, 1959

[1] Data on public libraries in centres under 10,000 population are for 1960 (supplied by the Quebec Public Library Commission). [2] Borrowers only. [3] 1956 figures. [4] Excludes duplication.

Academic Libraries.—Centralized libraries in larger Canadian universities and schools served nearly 750,000 students in the academic year 1958-59. Information was gathered by the DBS from university and college libraries serving enrolments of 500 or over and, for the first time, from centralized school libraries serving 666 to 680 pupils in publicly controlled elementary, intermediate and secondary schools.

The 32 university libraries surveyed reported a total stock of 6,040,556 volumes, or 75 per full-time student. Current operating expenditures of the libraries amounted to $4,022,494, or $48.20 per full-time student. Centralized school libraries serving centres of 10,000 population or over reported a total stock of 2,898,780 volumes, or 4.5 per pupil served. About one school in three provided centralized school library service, representing just over 40 p.c. of the enrolment in the schools surveyed.

2.—Book Stocks in the Larger Academic Libraries and Enrolment Served, by Province, Academic Year 1958-59

Province	University and College Libraries			Centralized School Libraries		
	Libraries	Volumes	Enrolment Served	Libraries	Volumes	Enrolment Served

Professional Librarians.—Acute shortages of professional librarians are reported by all types of libraries, as compared with standards set by the Canadian Library Association. For example, the CLA recommends, for public libraries, one professional librarian in 1959, compared with the actual number of 684 reported by the public libraries for that year. Similar shortages in other types of libraries accentuate the problem, since all draw on the relatively small number of graduates of Canada's four degree-granting library schools.

Measures taken to combat the shortages of professional librarians include salary increases in various types of libraries, and recruitment campaigns. Increases in 1959 over 1958 in median salaries of librarians in public and university libraries amounted to 10.4 p.c.

3.—Median Salaries of Librarians in Professional Positions, 1958-59

Position	Public Libraries in Centres over 10,000 Population	Regional and Co-operative Public Libraries	Provincial Public Library Services	University and College Libraries	Total Professional Librarians
	$	$	$	$	No.
Chief Librarian	5,250	4,750	6,166	8,143	160
Assistant Chief Librarian	4,688	4,750	4,667	7,000	75
Division, Department or Branch Head	5,208	3,938	5,250	5,361	356
General Librarian	4,300	3,875	3,500	4,065	620

The number of graduates of the four Canadian Library Schools—at the Universities of McGill, Toronto, Montreal and Ottawa— was 33.7 p.c. higher for the academic year 1959-60 than the average for the preceding five years, and enrolments for 1960-61 indicate an even more pronounced increase for that year. Of the June 1960 graduates, 107 of whom were awarded Bachelor of Library Science degrees, 81 p.c. were women and one in four of these was married. More than 70 p.c. had specialized in English, history or languages during their undergraduate studies and almost half had worked in some type of library before enrolling in Library School. After graduation, 41.6 p.c. of the graduates reporting took positions in public libraries, 38.6 p.c. went to university and college libraries, 5.5 p.c. to school libraries and 13.9 p.c. to special libraries. The median beginning salary of all graduates who reported was $4,400.

PART III.—SCIENTIFIC AND INDUSTRIAL RESEARCH

Section 1.—The National Research Council*

History and Organization.—Organized research in Canada on a national basis dates from 1916 when the Government of Canada established the Honorary Advisory Council for Scientific and Industrial Research under a Committee of the Privy Council. Provision was made for the planning and integration of research work, organization of co-operative investigations, postgraduate training of research workers, and prosecution of research through grants-in-aid to university professors. This was the basis of the Council's work from 1916 to 1924.

A Special Committee of Parliament, appointed to study a recommendation for establishing national laboratories, endorsed the proposal and the Research Council Act was revised by Parliament in 1924. Temporary laboratories were secured and research on utilization of magnesian limestone for refractories was carried out so successfully that a wartime industry, established during World War I, was re-established on a large scale. As a result of this achievement the Government, in 1929–30, provided funds for new laboratories.

The National Research Building on Sussex Drive, Ottawa, was opened in 1932, and in 1939 construction was begun of an aerodynamics building on a 130-acre site on the Montreal Road just east of the city. Later, other buildings were erected on this site, including woodworking and metalworking shops and separate laboratories for research on engines, gas and oil, hydraulics and structures. These facilities have since been enlarged and extended and new buildings have been provided for engineering, low-temperature studies and high-speed aerodynamics. In 1952 a cosmic ray laboratory, a thermodynamics building, and a large structure to house the Division of Applied Chemistry were added; in 1953 the Building Research Centre was completed. The same year, development began on a new 250-acre site on the opposite side of the road, where headquarters for the Radio and Electrical Engineering Division was constructed. In 1958, a unique Fire Research Laboratory was added to this site as part of the facilities of the Division of Building Research. An underpass connects the two areas.

A Prairie Regional Laboratory built on the University of Saskatchewan campus has been in operation since June 1948 and an Atlantic Regional Laboratory, on the campus of Dalhousie University at Halifax, N.S., was opened in June 1952. The Division of Building Research has established one of the most northerly building research stations in the world at Norman Wells, N.W.T. Completing its long-term plan for regional activities, the Division has also established a small Pacific Regional Station at Vancouver, in co-operation with the British Columbia Research Council.

A Medical Research Council, fully responsible for policy in the field of medical research but functioning under the general administration of the National Research Council, was established in November 1960 (see p. 390).

The National Research Council consists of the President, two Vice-Presidents (Scientific), one Vice-President (Administration) and 17 other members, each of the latter group being appointed for a term of three years and chosen to represent industry, labour or research in one of the basic natural sciences. Many of the members are drawn from the science departments of Canadian universities.

The Council's scientific and engineering activities are organized in nine divisions and two regional laboratories, each with its own director. Five laboratory divisions are concerned with fundamental and applied studies in the natural sciences—applied biology, applied and pure chemistry, and applied and pure physics. Four others are devoted chiefly to engineering work—building research, mechanical engineering, the National Aeronautical Establishment, and radio and electrical engineering.

Links with Industry.—In addition to its basic research foundations, the Council operates a Technical Information Service. Through a trained research staff, using the extensive library facilities available to the Council, it is usually possible to provide any required information at very short notice. A free and constant flow of personnel and information is maintained between the Council laboratories and industrial laboratories, the aim being to have Canadian industry use the Council's laboratories just as the units of a large company use their own laboratories as a source of scientific information and assistance. The Council also undertakes for any firm, under contract, research problems that cannot be solved by private consulting and testing laboratories and, in return, obtains assistance from many companies. The Council has long-standing and intimate contacts of this co-operative kind with many Canadian industries in various fields.

---

* Prepared by R. A. Lay, Public Relations Office, National Research Council of Canada, Ottawa.

Associate committees were established by the National Research Council early in its history and have been continued to date. Hundreds of specialists have accepted invitations from the Council to serve on committees and have brought their knowledge and experience to bear on the solution of research problems put before them. Members of committees give their time and effort to these special studies without charge and their assistance is a source of great strength to the Council.

Foundation Aspects.—Assisted research grants have been made by the Council since its inception in 1916. These awards are given to staff members in the science and engineering departments of Canadian universities to purchase needed equipment and to employ junior helpers, often students. Aid of this kind has been of considerable assistance in enabling the universities to put into operation the excellent graduate schools that now exist in Canada. In the year ended Mar. 31, 1961, more than $6,875,000 was provided out of Council funds for basic research at Canadian universities.

Scholarships and grants-in-aid of research are awarded annually by the National Research Council. Scholarships awarded in science and engineering include Bursaries and Studentships with values of $1,800 and $2,200 respectively, Special Scholarships valued at $2,200 and Postdoctorate Overseas Fellowships at $3,500 (single) and $4,500 (married). Graduate Dental Research Fellowships are also available. In the year ended Mar. 31, 1961, 597 of these different awards totalling more than $1,409,000 were made.

Since 1948, the National Research Council has awarded postdoctorate Fellowships in open competition to Canadians and nationals of other countries, which are tenable in the Council's own laboratories. The diversity of training and experience brought to the laboratories by these young scientists has had such a stimulating effect on the research effort that the program has been expanded in recent years. Fellowships are also tenable in the science departments of Canadian universities, in the laboratories of Atomic Energy of Canada Limited, and in the federal Departments of Agriculture, Mines and Technical Surveys, and National Health and Welfare. More than 200 of these awards are being held at the present time (March 1961), mostly in the fields of chemistry, physics and biology.

Applied Biology.—This Division's program covers practical problems related to the national economy, and fundamental studies in microbiology, biochemistry and biophysics as a basis for future application in agriculture, medicine and industry.

Problems of preparing, preserving and storing food constitute a large part of the Division's work, with particular attention in recent years to food freezing, cold storage and refrigerated transport. Specific studies in 1960-61 involved changes effected in foods during freezing and frozen storage, the design and performance of refrigerated trailer-transports, aeration of fermentations, and controlled-atmosphere storage of fruit. Micro-organisms related to the preservation and preparation of food are also studied, and a national culture collection of about 3,000 yeasts, bacteria and fungi is maintained.

The Division for some years has been investigating the physiological and biochemical changes in mammals, birds and man in adapting to cold. As the most recent part of this study, an international expedition under NRC leadership was carried out in the winter of 1960 on cold adaptation in the Eskimos of Cumberland Sound. No important differences between the Eskimos and white control subjects were found, indicating that because of the Eskimos' excellent clothing and Arctic technology, they do not show any major adaptive changes.

Another long-term project has involved basic studies of cellulose, the most abundant biological substance in green plants and bacteria, and of the ribonuclein particle which is responsible for producing all proteins in living cells. During 1960-61 the precursor of cellulose was isolated for the first time, purified, and its composition determined, while the ribonuclein particle was shown to consist of at least sixteen new proteins. Studies on the hemicelluloses of hardwoods and coniferous woods have provided considerable information of practical use in the pulp and paper and rayon industries. Important information has also been obtained on the structure of the protein hemoglobin and of proteins in general.

Applied Chemistry.—The Division of Applied Chemistry is concerned with supplying new scientific information for the development of Canada's natural resources and chemical industries. Although formerly much of the work involved solving immediate, specific problems, a larger part of the Division's effort is now being devoted to more basic studies. This avoids conflict with industrial laboratories and consultants and, in addition to providing fundamental information, often produces practical results.

For instance, a long-term investigation on the contacting of fluids and solids—an operation vital to many chemical engineering procedures—has resulted in a successful commercial operation for drying grain. The same method can easily be extended to chemical reactions and to removing liquids from other materials.

Another long-term project of considerable industrial potential has concerned the factors responsible for the stability, or the destruction, of suspensions of solids in liquids. Recently, a method has been devised for easily separating almost any suspended solid from the liquid surrounding it. When a mixture of solids is involved, it is often possible to separate single elements. Then, too, the study of chemical reactions at very high temperatures—carried on over the past several years—has resulted recently in the successful preparation of a stable polymer that could not be produced by conventional means.

The eleven sections of the Division are: analytical chemistry, applied catalysis, applied physical chemistry, chemical engineering, colloid chemistry, corrosion, high polymer chemistry, metallurgical chemistry, physical organic chemistry, rubber and textiles. Much of the work falls under the general headings of petroleum or corrosion chemistry, in that several sections work on topics related to one of these fields.

Pure Chemistry.—The Division of Pure Chemistry is organized around a nucleus of outstanding Canadian chemists who direct about 50 young postdoctorate Fellows from all over the world. The work consists of long-term fundamental investigations in physical and organic chemistry.

The work in organic chemistry includes investigation of the structures of alkaloids, studies of the infrared spectra of steroids, the synthesis of porphyrins and of compounds labelled with isotopes. Other sections deal with chemical kinetics and photochemistry, the study of the ionization potentials of free radicals by mass spectrometry, Raman and infrared vibrational spectroscopy, and the application of high resolution proton magnetic resonance techniques to the study of hydrogen bonding and other molecular interactions. Still others study certain aspects of surface chemistry such as the thermal properties of simple solids and imperfections in the bulk and the surface of alkali halide crystals, the heats of micellization by microcalorimetry, and the thermodynamics and stress-strain relationships associated with the absorption of fluids by active carbons. There is also a small group interested in the chemistry of fats and oils, and one engaged in fibre research.

Applied Physics.—The work in Applied Physics is divided between research projects likely to be of practical value and the continual development of the fundamental standards on which measurements generally are based. All the fundamental physical standards for Canada are housed and serviced in this Division, which now has primary standards equal to any in the world in the fields of mass, length, time, electricity, temperature and radiation.

The sections of the Division are: acoustics, electricity and mechanics, heat and solid state physics, instrumental optics, interferometry, photogrammetric research, radiation optics, special problems, and X-rays and nuclear radiations. Industrial problems receive considerable attention, particularly calibration work and industrial noise abatement.

Several of the Division's developments are being produced commercially. Noise-excluding high fidelity earphones developed earlier are finding wide use in high noise areas, as hearing aids in schools for the deaf, and in the field of audiometry. A revolutionary analytical plotter for making maps from aerial photographs will be available in 1962, and new, simplified, deepsea equipment for measuring temperature and depth is ready for sea tests.

Relatively new fields being investigated in the Division include studies on the thermal and electrical properties of ceramics, and on exploding wire plasma motors that might be used to propel rockets in outer space. An accurate and detailed method has been developed for recording the movements and changes of glaciers by means of photogrammetry. The radiation group has begun studies in radio chemistry to be able to measure radio isotopes more effectively. Work continues on the measurement of line standards of length in terms of wavelengths of light, and on the use of atomic or molecular properties to define time intervals.

Pure Physics.—Investigations are under way on cosmic rays, low-temperature and solid-state physics, spectroscopy, X-ray diffraction, and theoretical physics. The work is on fundamental problems that do not have immediate application but advance the frontiers of knowledge and supply the basis for further progress in the applied fields. Energetic particles approaching the earth from space are being studied from three approaches. Continuous recordings of cosmic ray particles reaching ground level are compared with data from some twenty stations around the world. Primary cosmic rays, and their modulation by clouds of particles from the sun, are studied by sounding rockets launched from Fort Churchill. The interaction of energetic particles with matter is investigated chiefly by means of photographic emulsions and Wilson cloud chambers.

The low temperature and solid state group studies the electrical, thermal and mechanical properties of metals, and semi-conductors especially at very low temperatures. In the spectroscopy group, the structures of atoms and molecules are investigated by means of their ultraviolet, visible, infrared and microwave spectra. The theoretical physics group is concerned with theoretical problems in atomic, molecular and nuclear physics.

The X-ray diffraction laboratory undertakes fundamental work in molecular and crystal structure and identification problems for government laboratories. X-ray diffraction methods are extremely valuable for identification purposes as they are non-destructive and require only very small amounts of material. Two of the major projects concern narcotics and vanadium minerals.

Building Research.—Technical improvements in housing are the primary concern of the Division. The research program therefore covers all aspects of housing design, building materials and components, and studies in soil, snow and ice mechanics. Regional stations engaged in research and information are maintained in Halifax, Saskatoon and Vancouver.

Examples of Division projects are the behaviour of cement aggregates and lightweight concretes; the materials and techniques of masonry construction and plastering; atmospheric corrosion of metals; paint and acoustics research; and examination of the performance of walls, windows, chimneys and domestic heating systems. Other studies involve the bearing strength of ice; the fundamental properties of various soil types, including permafrost and muskeg; frost action in soils; avalanche research; and the effects on buildings of ground vibrations caused by blasting or earthquakes. A fire research laboratory provides facilities for all types of fire resistance, fire prevention and fire fighting tests.

As the Division concentrates on building problems peculiar to Canada, much of the work concerns the performance of buildings and building materials in cold weather. In this connection, double-glazed windows and lightweight metal and glass curtain walls, used increasingly in modern buildings, have been examined. Special studies have been made to improve winter building techniques and there is a section devoted to problems of building in Northern Canada. Building on permafrost in the Far North presents a continuing challenge, and the Division assisted recently in the construction of the Kelsey Rapids hydro-electric plant in northern Manitoba.

Many results of the Division's research are expressed in the National Building Code, an advisory document of building standards increasingly used by the provinces and municipalities. The Division also establishes the building regulations for all houses built with National Housing Act assistance.

Mechanical Engineering.—This Division works mainly in the fields of mechanics, hydrodynamics (hydraulic engineering and naval architecture) and thermodynamics. Extensive testing and specification work is undertaken for a variety of industries and for government departments. Much of the work consists of continuing projects related to land, sea and air transportation.

The mechanics activities include mathematical analysis and computation, the development of instruments and servomechanisms, and research on mechanical devices such as gears. One group, working in the field of bio-medical engineering in collaboration with surgeons, has devised a tool for end-to-end joining of blood vessels by a simple stapling operation.

In hydraulics, a number of investigations and models have been made for improving Canadian harbours. As a result of these studies, a new kind of breakwater has been developed which absorbs waves rather than reflects them. Model tests have been successful and means of carrying out full-scale tests are being explored. A promising scheme has also been developed for reducing silt accumulation in harbours by wave energy. The ship laboratory has continued its studies on propeller, rudder and hull design and performance.

Railway work is devoted mainly to locomotives and the riding qualities and mechanical behaviour of freight cars. The improvement of braking systems and the use of cheaper fuels are being investigated. A long-term study is being made of the possible use of gas turbines in locomotives. The application of gas turbines to aircraft taking off and landing vertically is also being explored, together with the thermodynamic, aerodynamic and control problems that this type of aircraft involves. Considerable research is also being done on the behaviour of lubricants at high pressures, and that of gases at extremely high temperatures.

National Aeronautical Establishment.—The National Aeronautical Establishment is designed to meet the aeronautical research needs of military and civil aviation, to co-operate with the Canadian aircraft industry, and to carry out its own research program. Its studies therefore centre around problems of aerodynamics, aircraft structures and materials, and flight mechanics.

Aerodynamics research from low speeds up to a Mach number of about 12 is carried out in the Establishment's wind tunnels. Considerable attention is being given at present to low speed problems of vertical and short take-off aircraft. Other studies include work on the aerodynamic characteristics of high-thrust propellers, on wings with submerged fans, and on wings immersed in powerful slip-streams.

The research on structures and materials involves investigation of aircraft accidents, the fatigue and creep of aircraft structures, the determination of flight loads, aircraft design problems, and non-metallic materials. The latter study is part of a research for low density, high strength non-metallic materials resistant to high temperatures that could be used for structural purposes.

The flight mechanics program covers research on flight safety and flying stability and control; the development of a crash position indicator for locating crashed aircraft; atmospheric physics; anti-submarine magnetometry; and the avoidance of aircraft collisions.

Radio and Electrical Engineering.—The work of this Division includes fundamental research in electrical science, and engineering problems of interest to Canadian industry. The Division co-operates with the Armed Services and associated industries in designing, producing and evaluating new equipment.

Fundamental studies are carried out on radio wave propagation, radio astronomy, upper atmosphere research, and electronic and solid state research. A new radio observatory is being constructed at a site in Algonquin Park, where some equipment and laboratory buildings have already been installed. The Canadian rocket program at Churchill has introduced a new trend in upper atmosphere research, and instruments are being developed to study conditions in auroral displays and meteor showers.

Engineering problems include high-voltage studies, current and potential transformer calibration, the development of electronic medical instruments and operating-room facilities, antennas, electronic aids to navigation, and high-frequency standards. Equipment for calibrating current and potential transformers is being modernized to increase its accuracy and frequency range. An electronic system previously developed to automatically measure and record sweat rates in humans is now being applied in anaesthesia and in other fields where detection and control of moisture content of the air is important.

Among other projects are a microwave system for determining precisely the position of vessels engaged in hydrographic surveying offshore; a 'creative tape recorder' much in demand in electronic music studios; and a highly mobile counter-mortar radar.

Atlantic Regional Laboratory.—The Atlantic Regional Laboratory studies practical and fundamental problems related to the resources and industries of the Atlantic Provinces. In co-operation with industry, a semi-continuous dryer has been constructed for use on Irish moss—a red seaweed of commercial importance. Optimum operating conditions have been established and the quality of extracts from seaweed dried in the apparatus has been tested. The equipment has served as a model for mobile dryers to be used throughout the Atlantic Provinces. The dietary effects of seaweed components are also being investigated. Because carrageenin is used extensively as an additive in foods and drugs, studies are under way to determine any possible harmful effects of the extract. A similar project involves the use of dried, ground seaweeds as components of animal feeds.

The long-term investigation of the basic chemistry involved in the fabrication of steel has continued. Studies have been completed on the rate of oxidation of carbon in molten iron, and on the activity of ferrous oxide in molten slag. Magnesia refractories impervious to molten basic slags have been constructed. At the request of the adhesives industry, a fundamental study has been undertaken into the properties of collagen—a protein in cod skin used as the mother-substance for photoengraving glue.

Prairie Regional Laboratory.—One of the chief aims of the Prairie Regional Laboratory is to develop wider uses for crops grown on the prairies. This is achieved by determining potential uses of crops now in production and by encouraging new crops to meet specific needs. Research is therefore carried out on the properties and reactions of plant components, and on the biological, chemical and engineering processes for turning them into other compounds. The development of oil-seed crops as alternatives to seed crops has received considerable attention.

The Laboratory has studied, for some time, major plant constituents such as carbohydrates, protein, starch, lignin and fibres. An example of this work is the definition of the chemical structure of several polysaccharides found in cereal grains and important in baking, milling and fermentation technology. Attention is being given, also, to minor plant constituents—such as phenals, flavonoids, and terpenes, which are known to have fungicidal and germicidal properties. A plant extractives laboratory has been set up to systematically study extractives from local plants and shrubs.

The engineering and process development group is engaged in research on continuous fermentation processes, pulping processes on wood and straw fibres, and the effects of glyceride structure of fats and oils on the quality of margarines and shortenings. Large-scale processing and pilot-plant-scale operations are carried out. There is also a group, working in the field of mycology, concerned with the production of new chemicals, antibiotics, alkaloids and amino acids.

Administration.—Administration of the foregoing laboratories is organized as a Division of Administration and Awards, which exists only to serve the scientist. The five service units of this Division are: Awards and Committee Services (Awards, Committees, Publications, Research Journals); Administrative Services (General Services, Purchasing, Personnel); Information Services (Technical Information Service, Library, Public Relations Office, and Liaison Offices in Ottawa, Washington, D.C., and London, England); Plant Engineering Services; and Legal and Patent Services. The latter group works closely with Canadian Patents and Development Limited (see p. 108). An expert on economic research acts as special assistant to the Assistant Director, Information Services.

Section 2.—Research in the Atomic Field*

In the past, the atomic energy activities of many countries have been devoted mainly to uranium mining operations in support of military uses. However, a more durable phase is approaching, when a great proportion of the expanding annual construction of new electric power generating plants will employ nuclear energy. This transition is creating a temporary slowing down in the demand for Canadian uranium.

During the next ten years a large part of the relatively small uranium supply for nuclear power will be directed to the supporting inventory of nuclear fuel; beyond that, the make-up to replace consumption is foreseen as rising to match and surpass the current world rate of production. By that time the atomic energy industry as a whole should be supported by the consumers of electric power but at present, in all countries and for a number of years to come, the young industry has the greater part of its costs furnished directly or indirectly through taxation. In an intermediate phase, capital advances made in anticipation of revenues from power consumers will be important.

Three government organizations have the basic responsibilities for atomic energy in Canada: (1) the Atomic Energy Control Board, responsible for all regulatory matters concerning work in the nuclear field; (2) Eldorado Mining and Refining Limited, with a double function as producer of uranium and as the Government's agent for purchase of uranium from private mining companies; and (3) Atomic Energy of Canada Limited, concerned with nuclear research and development, the design and construction of reactors for nuclear power, and the production of radioactive isotopes and associated equipment, such as cobalt-60 Beam Therapy units for the treatment of cancer.

The four principal uranium-producing areas in Canada are at Great Bear Lake, N.W.T. (closed), the east end of Lake Athabasca, Sask., Elliot Lake, Ont., and Bancroft, Ont.; all resulted from reports made by the Geological Survey of Canada. For the greater part, the mining operations themselves are conducted by private companies supported by export contracts that would have terminated in 1962, but have been revised so that some will be stretched out, without increase in total supply, to 1966. Eldorado ran two mines, at Beaverlodge on Lake Athabasca and at Port Radium on Great Bear Lake. However, the latter mine exhausted its ore body during 1960 and closed after 27 years of operation. The revision of the contracts also closed down the less economical mines of private companies. Only two of the original six companies in Beaverlodge were in operation in January 1961 and seven of the original eleven in the Elliot Lake area. A refinery run by Eldorado is located at Port Hope on the northern shore of Lake Ontario. The Research and Development Division of Eldorado, together with the Mines Branch of the Department of Mines and Technical Surveys, also makes important contributions to the solution of recovery problems; a noteworthy example was the development of the sodium carbonate leaching process for the Beaverlodge uranium ore processing plant, which did away with the necessity of shipping of large amounts of acid to that remote area.

---

* Prepared by Dr. W. B. Lewis, Vice-President, Research and Development, Atomic Energy of Canada Limited, Chalk River, Ont.

Atomic Energy of Canada Limited (AECL) has an eleven-man Board of Directors, including individuals from private industry, public and private power companies, and the universities. The Company's major plant is near Chalk River, Ont., and its Head Office and Commercial Products Division are in Ottawa. During 1960, contracts were awarded for the construction of AECL's new research centre at Whiteshell, Man., and site development was under way by the end of the year. Early in 1958, a Nuclear Power Plant Division was established in Toronto, with the responsibility of directing the NPD-2 project. This project, a nuclear power demonstration plant to produce 20,000 kw. of electricity, was nearing completion at Rolphton near the Chalk River establishment; its design and construction is being carried out in collaboration with the Canadian General Electric Company Limited and The Hydro Electric Power Commission of Ontario. Also, at the end of 1960, the Nuclear Power Plant Division of AECL, with the assistance of Ontario Hydro, had under way the designing and constructing of a full-scale nuclear power plant, known as CANDU, which will supply 200,000 kw. of electricity to the Ontario Hydro system. By agreement, Ontario Hydro will purchase the plant, situated at Douglas Point near Kincardine on Lake Huron, when it is in satisfactory operation. An Advisory Committee on Atomic Power Development keeps all other utilities fully informed of the progress being made. This Committee, which was set up by the Government in 1954, meets periodically at Chalk River to assess the economic prospects of nuclear power throughout the country.

Because of the great pace of technological development in nuclear power throughout the world, AECL devotes a major effort to collaboration with many organizations. These include industrial firms and the scientific and engineering departments of universities in Canada and, through foreign government agencies and several international organizations, many technical groups in other countries. For example, the Canadian General Electric Company has been contracted to carry out the design and development of an organic-cooled reactor, and it seems likely that this will be the first reactor to be built at the Whiteshell Nuclear Research Establishment. AMF Atomics Canada Limited and CGE are AECL's chief contractors for fuel element fabrication, and other work related to Canada's nuclear power program is carried out in collaboration with Orenda Engines Limited and the Canadian Westinghouse Company Limited. In general, AECL's policy is to stimulate the interest of private industry in the development of nuclear power so that these firms can take over construction of power plants when the time arrives, leaving AECL free for fundamental studies and developing new reactor concepts. AECL also lends general support to the nuclear and related studies of Canadian universities and lets contracts to the universities on specific problems.

In the international field, close ties are kept with the United States Atomic Energy Commission and the United Kingdom Atomic Energy Authority, both of which have representatives permanently at Chalk River. A new agreement with the United States has been signed for co-operative work on heavy-water-moderated reactors; it provides for the free exchange of all technical data in this field and a commitment by the USAEC to spend $5,000,000 in the United States on research and development related to reactors of Canadian design. More or less formal collaboration has also been established with the International Atomic Energy Agency, the Organization for European Economic Co-operation and Euratom, as well as with India, France, Sweden, West Germany, Switzerland, Japan and Pakistan. In India, construction and running-in of the Canada-India reactor was completed during 1960, and the reactor was formally inaugurated in January 1961.

Chalk River Project.—The Chalk River Project is a research and development establishment. Basic and applied research is carried on by about 200 professional scientists and engineers supported by 300 technicians devoted to research in nuclear physics, nuclear chemistry, radiobiology, reactor physics, radiation chemistry, environmental radioactivity, physics of solids and liquids, and other subjects, using as their primary facilities the two major reactors, NRX and NRU, the auxiliary reactors, ZEEP, PTR and ZED-2, the tandem Van de Graaff accelerator and analytical facilities such as a precision beta-ray spectrometer, mass spectrometers, an electron microscope, multi-channel pulse analyzers, automatic recorders, analogue and digital electronic computers. Many of these scientists and engineers are engaged, part- or full-time, on the development of nuclear fuel, on preliminary design and optimization calculations for nuclear power reactors, on solving technical problems encountered in the operation of the reactors, on studies of potential accident conditions in and around reactors such as a burst in a pressurized water-cooling system, on studying disposals of radioactive wastes, on design of instruments for reactor operation such as monitors for traces of normal water in heavy water, for radioactivity in flowing water, and on fail-safe and dependable control systems.

Other groups of engineers, scientists, technicians and tradesmen are engaged in operating and maintaining the reactors, accelerators, chemical plants, heavy-water upgrading plants, workshops, and nitrogen and helium liquefiers. Including the supporting services of finance, catering, library, plant hospital, fire protection, transportation, building maintenance, printing and reproduction and others, the total payroll numbers 2,300. Contractor's men and attached staff add more than 100. Compared with atomic energy establishments elsewhere, the Chalk River plant is of medium size but, for its size, it covers a very broad range of activities.

Heavy-water-moderated research reactors are now becoming numerous and widespread throughout the world, but most of those operating at a high flux of neutrons use enriched uranium fuel (e.g., CP-5 near Chicago in the United States, DIDO and PLUTO at Harwell and DMTR at Dounreay in the United Kingdom, and EL-3 at Saclay in France); however, these enriched uranium reactors do not have as much space available for experiments as do those fuelled with natural uranium and, with the exception of the new Canada-India reactor, NRX and NRU are the only heavy-water-moderated high-flux reactors using this fuel.

The intense beams of neutrons provided by NRX and the still more intense beams from NRU have made possible studies that have attracted scientists from other centres. At the present time (January 1961) a team of Brookhaven (U.S.) and AECL scientists is using an NRU beam with a high-speed chopper and long flight path for neutron nuclear interaction studies; also a team with scientists from Harwell (U.K.) is using another system of choppers on another beam for studying details of the slowing-down action of moderators on neutrons.

In recent years a great technological advance has been based on the properties of nearly perfect crystals with controlled impurities, of which the transistor is the best known example. Studies of the energy changes of very-low-energy neutrons have greatly extended the knowledge of other such processes in solids and liquids where a number of atoms co-operate and an interpretation is possible in terms of quantized elastic waves or phonons. Pioneer work has been done in neutron-phonon interactions using neutron beams from NRX and NRU. Scientists from other countries are also working in this field at Chalk River.

NRX and NRU share with other high-flux reactors, such as the MTR at Arco, Idaho, the ability to produce certain isotopes whose formation requires that two or more neutrons react with the original atom in rapid succession to forestall radioactive decay. In this use they may in a few years be supplanted by still-higher-flux reactors planned in the United States and the U.S.S.R. For chopped neutron beams they may be supplanted by pulsed neutron sources driven by high-current accelerators, but for engineering testing of materials and especially of new types of fuel assemblies, NRX and NRU seem likely to remain unsurpassed. Consideration is being given to raising the flux in NRU. Since 1950, NRX has been used for fuel test irradiations in high-temperature water, and has contributed to the design and operating conditions for fuel in U.S. Naval reactors and the pressurized water reactor at Shippingport. Similar irradiations have recently provided the basis for the design of fuel for the NPD and CANDU reactors.

NRU is the first high-power reactor in which the fuel is regularly changed at full power, a process that confers important advantages in power reactors. NRX is the first high-power solid-fuel reactor to operate without control rods, a feature that promises economies and safety in power reactors. Control is achieved by the level of heavy water maintained against a permanent drain by the speed of return by pumps.

CANADIAN NUCLEAR REACTORS IN OPERATION, UNDER CONSTRUCTION OR APPROVED FOR CONSTRUCTION

Name	Location	Date of Start-up	Power	Fuel	Moderator	Coolant	Use
Zero Energy Experimental Pile (ZEEP)......	Chalk River, Ontario	1945	100 w.	Natural uranium metal or oxide	Heavy water	—	Lattice experiments
National Research Experimental (NRX).....	Chalk River, Ontario	1947	40,000 kw.	Natural uranium metal	Heavy water	Ordinary water	Research and isotope production
National Research Universal (NRU).........	Chalk River, Ontario	1957	200,000 kw.	Natural uranium metal	Heavy water	Heavy water	Research and plutonium and isotope production
Pool Test Reactor (PTR)....................	Chalk River, Ontario	1957	100 w.	Enriched uranium alloy	Ordinary water	Ordinary water	Reactivity and absorption measurements
Toronto University Sub-critical Reactor......	Toronto, Ontario	1958	—	Natural uranium metal	Heavy water	—	Research and teaching
McMaster Nuclear Reactor (MNR)..........	Hamilton, Ontario	1959	1,000 kw.	Enriched uranium metal	Ordinary water	Ordinary water	Research
ZED-2.....................................	Chalk River, Ontario	1960	100 w.	Natural uranium metal or oxide	Heavy water	—	Lattice experiments
Canada-India Reactor (CIR)................	Bombay, India	1960	40,000 kw.	Natural uranium metal	Heavy water	Ordinary water	Research and isotope production
Nuclear Power Demonstration (NPD-2)......	Rolphton, Ontario	1961	20,000 kw. (electricity)	Natural uranium oxide	Heavy water	Heavy water	Power demonstration
Canadian Deuterium-Uranium (CANDU)...	Douglas Point, Ontario	1964-65	200,000 kw. (electricity)	Natural uranium oxide	Heavy water	Heavy water	Power

Nuclear Power Prospect.—The generation of electricity by nuclear power on a competitive economic basis is expected to be established by the type of reactor now being designed by the Nuclear Power Plant Division of AECL at Toronto. This promise rests on the attainment of very low-cost fuelling by an extremely simple system tested over many years by experiments in the NRX reactor. The fuel will be uranium dioxide specially prepared from natural uranium entirely in Canada. A wide range of tests in hot channels in the NRX reactor at heat ratings and energy yields in excess of those required has established that this oxide fuel is incomparably more dependable than the uranium metal fuel for which the NRX and NRU reactors were designed. No provision for reprocessing the irradiated fuel is involved, for, by careful attention in the reactor design to minimizing any waste of neutrons, an energy yield of over 9,000 thermal megawatt-days is expected from a ton of uranium before it is discarded. This results in a prospective fuelling cost of about 1 mill (0.1 cent) per electric kilowatt-hour, to be compared with about 3 mills from coal at $8 per short ton.

Canada has access to such an abundance of coal, oil and natural gas that the competitive cost-level for electric power is lower than in many other countries. Nuclear power plants of the types now under construction in the United Kingdom and the United States have been assessed as unable to reach a low enough cost-level, at least until several successive plants have been built and operated to discover where economies are possible. Plants of the CANDU type do not promise to be significantly cheaper in initial outlay, but the fuelling cost can be so much less that meeting the competitive target is a very real prospect.

The low fuelling cost derives as much from the details of the design proposed as from the general type of reactor chosen. Some of the important features seem worthy of mention. The full-scale plant will generate 220 megawatts with a steam-cycle efficiency of 33.3 p.c., so the reactor has to supply 660 thermal megawatts to the steam-raising plant. The reactor is essentially a tank of heavy water, 20 ft. in diameter and 16.5 ft. long, lying horizontally. It is penetrated by 306 fuel channels parallel to the axis on a 9-inch-square lattice. Each channel is a zirconium-alloy pressure tube of 3.25 in. inside diameter and about 0.16 in. thick. The fuel consists of bundles of 19 rods, 0.6 in. in diameter and 19.5 in. long, made of dense uranium dioxide in thin zirconium-alloy tubes. Heat is taken from the fuel directly by heavy water that passes at 560°F. to the steam boiler, where normal water is raised to saturated steam at 483°F. and 560 psi. The heat developed in the heavy-water moderator that is in the tank outside the fuel channels is not directly used and amounts to about 35 thermal megawatts. The over-all net plant efficiency is then 29.1 p.c. These details show that the design represents a very considerable advance over that originally conceived in 1956, and the improvement bears promise that continued progress will lead to costs well below the economic target. As examples of the advance, it may be noted that for the same electric power output, the reactor power has been brought down from 790 to 700 megawatts and the length of fuel rod from 86 to 30 kilometres. The prospective fuelling cost has dropped from 1.85 mill/kwh. to 1.0 mill/kwh. On the other hand, no over-all reduction has been achieved in the capital cost estimates which remain in the range of $300 to $400 per electrical kilowatt for the whole plant. No reduction is expected until manufacturing experience has been gained that can be used in future construction, but thereafter appreciable reductions should be possible. A detailed breakdown of costs for CANDU was published during 1960.

POWER-COST ESTIMATES FOR CANDU
(mills/kwh.)

Item	*First Unit 200 MW(e)*	*Twin Unit 400 MW(e)*	*2nd Unit Increment 200 MW(e)*
Fixed charges	3.9 to 4.9	3.3 to 4.4	2.7 to 3.8
Fuelling	1.1 " 1.1	1.1 " 1.1	1.1 " 1.1
Operating	1.0 " 1.0	0.7 " 0.7	0.4 " 0.4
TOTALS	6.0 to 7.0	5.1 to 6.2	4.2 to 5.3

These figures will serve to explain why the first plants seem to find economic application in Canada only in the Ontario system, where annual charges on capital are low and coal has to be imported and costs about $8 per short ton. Moreover, the demand for electricity in Ontario is growing at more than 200 megawatts capacity per year. To build reactors for lower powers saves little in cost, so the cost per kilowatt rises and becomes uneconomic. When confidence has been gained from the early plants, higher powers seem likely to be attempted and 400 electrical megawatts from one reactor may be attained.

Operating experience with the NRX and NRU reactors at Chalk River and with the many other types throughout the world has served to emphasize the extreme difficulty and costliness of making even minor operating repairs in the presence of the extremely high levels of radiation that are encountered around reactors. Directly and indirectly, this is responsible for the current hesitation to construct a number of large plants that for economic power cost $40,000,000 or $50,000,000 each. With every new design it is necessary to acquire operating experience before the reliability and availability can be effectively estimated. Experience with defective fuel has been deliberately sought at Chalk River, because this is one of the difficulties most likely to be encountered. Appropriate techniques of locating the defective element, removing it and cleaning up the released radioactive fission products have been established and practised; at the same time fuel designs and ratings have been studied which lead to least difficulty in these operations. Experience of mechanical failures of control rods has lent weight to reactor designs such as NPD-2 where control rods are not needed. Temperature changes are likely to provoke mechanical failures, so design is aimed at keeping the reactor at power for all essential operations including refuelling and complete maintenance testing and readjustment of instruments and working parts of the control system.

These considerations lead to a vicious circle, for the quickest way to achieve reliability is to construct and operate a number of plants following these design principles, but until such plants have operated satisfactorily utilities are unwilling to take the risk of losing time for repairs. The same principles hold throughout the world. For example, the United Kingdom is following a program based on the Calder Hall type of reactor developed, not by a utility company, but by the Government to serve a military requirement. Italy is purchasing three power reactors—one from the United Kingdom, one from the United States based on the Shippingport and Yankee reactors, and one from the United States closely following the Commonwealth Edison Dresden plant. Canada is pioneering another pattern financed by the Government, and working at Chalk River to develop technical knowledge and experience that will give confidence to the utilities. The performance of the demonstration reactor (NPD) will tell whether the sought-for reliability has been achieved so that utilities can finance plants unaided.

Because the CANDU type of reactor is suitable only in large units, AECL is undertaking to study another type of reactor proposed by the Canadian General Electric Company that should have a lower capital cost. This is also a heavy-water-moderated reactor, but the heat is taken from the fuel by an organic liquid specially chosen for a high boiling point and minimum decomposition by radiation. This is a hybrid design that should utilize the Chalk River experience with heavy water and uranium oxide fuel and the experience of the organic liquid developed in the United States as a coolant and moderator for a nuclear reactor. Development of metals that are suitable for use in such a reactor is required and may take a few years to effect.

A third type of power reactor is also under study: again heavy-water-moderated and uranium-oxide-fuelled, but the coolant is normal steam at high pressure. The steam would be superheated in the reactor. New materials are required also for this design and their development may be lengthy. Such a reactor would have a higher efficiency than the CANDU type and would be suitable for large sizes, possibly in combination with an organic liquid coolant.

Section 3.—Space Research in Canada*

Canadian scientific activities in space make no attempt to compete with activities in larger countries like the United States and the Union of Soviet Socialist Republics, but there are important things that can be done better in Northern Canada than elsewhere. Suppose space near the earth's surface is divided into various levels on a technological basis, that is, defining levels to be studied in terms of the vehicles that can be used to carry instruments. Instruments can be carried in aircraft or unmanned balloons up to heights of about 140,000 feet or 27 miles; the lowest practical satellite orbit is about 200 miles. In the interval between, many of the interesting upper atmosphere effects occur, such as the absorption of radio waves which causes communication blackouts. The aurora or northern lights and the lower conducting layers of the ionosphere also occur at these levels. At present, direct measurements in this interesting region of nearby space can be made only by the use of rockets. The rockets that carry instruments into this region need not be the large types used for launching satellites; very effective scientific results can be obtained using rockets of various sizes but having a maximum launching weight of approximately one ton, about 150 lb. of which is scientific instruments. Such a rocket will carry its load of 150 lb. to a height of 180 miles. Such a rocket has been developed in Canada by the Defence Research Board's Canadian Armament Research and Development Establishment.

The objectives of the scientific work are related to the physical and chemical nature of the rarefied gas in the upper atmosphere and the radiations and flux of particles which come in from the sun or outer space. It has become realized during the past few years that the solar atmosphere extends out to the earth's orbit and that there is an interesting region surrounding the earth where the earth's atmosphere merges with that of the sun. There is a flow of energy from the sun, not only in the form of electromagnetic radiation such as visible light, ultraviolet light, etc., but of gas and energetic particles which are often spoken of as the solar wind. This wind consists of clouds of moving gas and includes particles of quite high energy, in fact up to cosmic ray energies. This wind is very turbulent and its intensity varies greatly with observed activity on the surface of the sun. In fact, the intensity of ultraviolet light, X-rays and high energy particles coming from the sun is extremely variable. This is true even though the visible light from the sun is very steady. Radio waves from the sun also show turbulent bursts related to activity on the surface of the sun.

The earth's atmosphere is quite opaque to most of the wide spectrum of radiation and particles coming from the sun. There is a window covering a band of wavelengths represented by visible light and a few more narrow transmission bands in the infrared and at radio wavelengths. When one considers that the sun emits both electromagnetic radiation and particles with energies corresponding to all values from radio waves through the visible, ultraviolet, X-rays and cosmic rays, and only a small fraction of this range of the spectrum penetrates the atmosphere, it is apparent that measuring instruments must be taken outside the atmosphere to learn what is going on in this solar wind. Before the days of rockets and satellites only indirect measurements could be taken, such as by studying the reflection of radio waves from the ionosphere and spectroscopic measurements of the aurora.

The temperature of this solar wind is quite high—high enough that the gas is ionized and, therefore, electrically conducting. The turbulence is, therefore, not like the winds and storms in the lower more dense atmosphere but is subject to electromagnetic forces. The density of the solar wind is lower than the best vacuum that can be achieved in the laboratory and the motion of the particles represents a very high temperature. When this flow of gas moves within reach of the earth's magnetic field, its motion is profoundly influenced by the earth's magnetic field and the earth's magnetic field is, in turn, distorted by the flow of conducting gas from the sun. This flow occurs in bursts and the resulting phenomena at the earth are magnetic storms, radio blackouts, and aurora. The effect on communications is of great commercial importance. There is probably some connection between this turbulence in nearby space and weather, although an understanding of it requires a great deal more research.

---

* Prepared (in February 1961) by Dr. D. C. Rose of the National Research Council, Ottawa.

The earth's magnetic field is not symmetrical with the earth's axis. It may be represented approximately by its similarity to the field of a simple magnet near the centre of the earth. The axis of this magnet is tilted with respect to the earth's axis in such a way that the north magnetic pole is in Canadian territory. The region of maximum auroral activity, of almost continuous geomagnetic and ionosphere disturbances, surrounds this magnetic axis and the only place in the world that has readily accessible stations crossing the area of maximum auroral activity is in Northern Canada.

This, of course, has been well known for many years and centres of research on the ionosphere, aurora, geomagnetism and cosmic rays have grown in government laboratories such as the National Research Council, Defence Research Board and Department of Mines and Technical Surveys, and in Canadian universities such as the Institute of Upper Atmosphere Research in the University of Saskatchewan and the cosmic ray group in the University of Alberta, Calgary.

Canada's space objective is to a large extent to take advantage of new techniques in studying the upper atmosphere, particularly in this interesting region between balloon levels and satellite orbits. A certain scientific responsibility also exists because of Canada's geographic location in respect to the north geomagnetic polar regions.

The importance of getting scientific data from northern areas has been realized for many years and with the organization of the International Geophysical Year in 1957-58 the United States built a rocket-launching facility at Fort Churchill, Man., as an IGY project. This has been continued in operation since the IGY and several hundred rockets have been launched carrying scientific instruments far into the upper atmosphere.

Canadian scientists in the Defence Research Board laboratories have built instruments into rockets launched at Churchill. During the IGY and immediately after it, American rockets were used. However, with development of a rocket by the Canadian Armament Research and Development Establishment completed in 1959, Canadian rockets are being launched at the American-operated rocket range at Churchill. The objectives of the Canadian experiments include studies of infrared radiation in the upper atmosphere, the electron density in the lower ionosphere which is largely responsible for radio blackouts, and the measurement of energetic particles including cosmic rays from galactic space and from the sun.

In 1959 the National Research Council formed an Associate Committee on Space Research, the purpose of which is to act in an advisory capacity in co-ordinating Canada's space research activities of a non-defence nature and particularly to make it possible for university research workers, who have interest and experience in upper atmosphere physics, to take advantage of the new rocket techniques. Several university research groups are planning experiments on various problems related to upper atmosphere physics. Their instruments will be launched in rockets during 1961 and a continuing series of investigations is being planned.

Although, because of its geographical position, Canada has a strong interest in nearby space in polar regions, space activities are not confined to that region. The United States has offered to carry experiments planned in other countries in some of their satellites, and Canada was the first country to take advantage of this opportunity. An experiment known as the "Topside Sounder" will be launched in a United States satellite, probably early in 1962. This experiment being carried out by the Defence Research Telecommunications Establishment is a technique of studying the ionosphere by measuring the reflection of radio waves from the topside of the ionosphere or from above rather than from below as is done from the surface of the earth. The same satellite will carry cosmic ray measuring equipment built by the National Research Council's Division of Pure Physics.

In addition, Canada takes an active part in international space scientific activities and holds a membership on the United Nations Committee on the Peaceful Uses of Outer Space. This 24-nation committee will probably be planning a world-wide conference in this field in the near future. The National Research Council also holds a membership in the International Council of Scientific Unions Special Committee on Space Research known as COSPAR. This is a very effective international committee on a purely scientific level where membership is open to the National Academies or National Research Councils of all countries having an active space research program. The present membership consists of representatives from countries on both sides of the iron curtain and from several international scientific unions. It meets once a year and holds interesting symposia on special subjects relating to space science.

Section 4.—Other Scientific and Industrial Research Facilities

Aside from the research facilities and activities covered in Sections 1, 2 and 3, Canadian research is carried on by various federal agencies, provincial organizations, universities and industries. Several provinces in Canada have established provincial Research Councils to stimulate and support research on problems having special provincial significance The universities, of course, form an extremely important part of the Canadian pattern of research. Much of their work is along fundamental lines but practical problems are not neglected, especially those of regional interest.

All three types of institutions—federal, provincial and university organizations—have an interest in problems of industrial significance; this is part of the current Canadian pattern of research. Though many Canadian industries now possess research facilities—some of them quite extensive—the main bulk of industrial research to date has been done under government auspices.

Thus the unique problems of the country, particularly its large area coupled with a small population, have led to a typically Canadian organization of research, of which a very strong associate committee system is perhaps the most distinctive feature.

Subsection 1.—Federal Organizations

Although research by industrial firms has been slow to develop in Canada, government research has expanded rapidly, at first because of the need for speeding up the production of raw materials, which were for many years the basis of Canada's expor trade, and secondly because of the more recent interest in the processing of these raw materials and the necessity of meeting the needs of national defence. Federal agencie involved in research include the Departments of Agriculture, Fisheries, Mines and Technical Surveys, National Defence, National Health and Welfare, Northern Affairs and National Resources, and Trade and Commerce; the National Research Council and othe Crown corporations such as Atomic Energy of Canada Limited. A system of committees with nation-wide representation, eliminates unnecessary duplication of work from thes national research organizations.

The scientific work of the Department of Agriculture is described in Chapter IX o this volume, the work of the Defence Research Board in Chapter XXV, specialized wor in scientific forest research in Chapter X, scientific services concerned with Canada' mineral resources conducted by the Department of Mines and Technical Surveys i Chapter XI, investigational work of the Department of Fisheries in Chapter XIII, researc of the Canadian Wildlife Service of the Department of Northern Affairs and Nationa Resources in Chapter I, the work of the National Research Council at pp. 372-378 an atomic research at pp. 378-383. The activities of the other federal agencies engaged i research are described briefly in the following paragraphs.

Department of National Health and Welfare.—The Department of Nationa Health and Welfare supports both intramural and extramural research programs. Withi the Department, the Food and Drug Directorate, the Laboratory of Hygiene, the Occu pational Health Laboratory and various clinical services are engaged in scientific research in their respective fields. Special studies and surveys are conducted in social and medical economics by the Research Division. The extramural program consists of grants in aid of medical research at universities, hospitals and other research institutions from funds provided under the National Health Program. The Public Health Research Grant provides over $500,000 per annum, with allocations from the Mental Health, General Public Health, Tuberculosis, Cancer, Child and Maternal Health and Crippled Children's Grants making up about $2,000,000 in additional funds. To co-ordinate medical research programs, meetings are held by representatives of the National Research Council, Defence Research Board, Department of Veterans Affairs, National Cancer Institute and the Research Advisory Committee of the Department of National Health and Welfare. These have provided a reasonably clear definition of the field of interest of each organization and have minimized uneconomical overlapping.

Grain Research Laboratory.—Rapid development of grain production in Western Canada led to the passing, in 1912, of the Canada Grain Act. This Act is administered by the Board of Grain Commissioners, which reports to Parliament through the Minister of Agriculture. The Board is responsible for control of the weighing, grading and warehousing of Canadian grain. Soon after its establishment, the Board encountered problems that required scientific study and a Grain Research Laboratory was established at Winnipeg, Man., in 1913.

The Grain Research Laboratory, with a staff of 55, is the main centre of research on the chemistry of Canadian grains. It is well staffed and equipped to provide the service required to help maintain and expand domestic and foreign markets for all types of grain. The Laboratory collects and tests samples of various crops to obtain information on the current quality of all grains shipped during the crop year and prepares, annually, certain information required by the Board for administering the Canada Grain Act. Fundamental research is also undertaken; the program is directed toward increased understanding of what constitutes quality in cereal grains and toward improving the methods of assessing quality.

Subsection 2.—Provincial Organizations

The fact that only a few provincial research organizations exist does not indicate lack of interest in research by the provinces. Most provincial governments have university laboratories to consult, particularly about local industrial and agricultural problems, and many individual departments have facilities for research in their particular fields of endeavour or assist research through the provision of financial aid to students working in those and other scientific fields. Agriculture is particularly well covered because of its importance as an export industry but the provinces are also intensely interested in their other natural resources. Their efforts in the fields of agriculture, forestry, mining and fisheries are outlined in the Chapters dealing with those subjects (see Index).

Nova Scotia Research Foundation.—This body was created by the Government of Nova Scotia in 1946 to give its people additional scientific and technical assistance in finding new and better ways to utilize the resources of the forest, the sea, the farm, the mine and the process industries. To this end it seeks to correlate and further scientific work on local problems and available resources. It assists universities, colleges, research groups, industries, provincial and federal departments and individuals by loans of equipment, grants, scholarships, laboratory and summer assistants, library, cartographic, photogrammetric and translation services, and technical information. It has supported or collaborated in work on breeding new varieties of plants and root nodule bacteria; on antibiotics, poultry, blueberry culture, coal-burning equipment, the constitution and gasification of coal, the non-destructive testing of mine equipment, the utilization of anhydrite, diatomite, fish waste, gypsum, seaweed, slag, slab wood and fertilizing materials. It has conducted geophysical, geological, air pollution, and seaweed surveys as well as forest aphid, forest ecology and genetic studies and has assisted studies on the nutrient cycles of lakes, on X-ray crystallography, and on pressures in underground strata. Its Geophysical Division is equipped to undertake all types of magnetometric, gravimetric, resistivity, seismic and electromagnetic explorations. The Technical Services Division provides free technical information to industries in the province and offers them research and development services and facilities in the fields of physics, chemistry and engineering, including operational engineering. During the summer of 1960, a total staff of 114 persons was engaged on 32 projects.

Saskatchewan Research Council.—The Saskatchewan Research Council was established in 1947 by provincial statute with the principal object of carrying out research in the physical sciences, both pure and applied, which would improve the provincial economy. The Council is therefore particularly concerned with the commercial exploitation of provincial resources and the scientific aspects of business. Besides being actively engaged in its own projects, the Council, by the granting of funds, supports further research at the University of Saskatchewan. Its buildings, occupied by a permanent staff of 40 persons, are situated on the University campus.

Research Council of Alberta.—The Province of Alberta set up a Scientific and Industrial Research Council in 1921, the promotion of mineral development within the province being the chief purpose leading to its establishment. The Council operates under an Act somewhat similar to that which set up the National Research Council and is financed by provincial government appropriations. The present program is directed to the application of basic and applied science toward the development of the natural resources of the province. Investigations in the Council laboratories and pilot plant are organized into two branches—the Earth Sciences Branch which includes all work on groundwater geology, geological surveys and research, and soils, and the Fuels Branch which includes work on coal, petroleum, natural gas, and gasoline and oil testing. There are, in addition, project groups dealing with industrial engineering services, highway research, a co-operative program on cloud physics with reference to the hail problem, and a number of special projects.

The operations of the organization are controlled by a Council of ten individuals representative of the government, the university and industry. The various research projects are under the immediate supervision of advisory committees and the Technical Advisory Committee of the Council; the latter is composed of senior officers of the Council and the government, with certain committee chairmen and university representatives.

The Council laboratories, located beside the University of Alberta campus, include a $750,000 research laboratory and pilot plant provided by the Province of Alberta in 1955.

British Columbia Research Council.—The British Columbia Research Council, under the sponsorship of the provincial Department of Industrial Development, Trade, and Commerce, provides a scientific and engineering staff with laboratories on the campus of the University of British Columbia. The objective is to enable even the smallest firms to improve their competitive position in Canadian and world markets by the use of the most up-to-date scientific and technical knowledge. The Council provides three classes of service: a free information service in collaboration with the National Research Council; assistance to specific firms at cost where information cannot be supplied from existing knowledge; and, at the Council's expense, research on problems of general value to the industrial development of the province.

The Ontario Research Foundation.—The Ontario Research Foundation, established in 1928, is an independent applied-research organization financed initially by an endowment fund composed of subscriptions from manufacturers, corporations, private individuals, and a grant from the provincial government. Most of its current income is derived from contract research and annual provincial government grants. The Foundation carries on research to assist agriculture and industry in developing the natural resources of the province. A study has been made of the physiography and climate of southern

Ontario and also of the parasites found in wildlife in this province. Many investigations have been undertaken in the industrial field and the Foundation is well equipped to work in engineering and metallurgy, physics, textiles, chemistry and biochemistry. The services of the Foundation are at the disposal of industry on a fee basis, and consultative services, testing, short-term studies and long-term investigations have been undertaken for hundreds of firms. The work has resulted in better products and in more efficient processing. The Foundation administers a grant from the provincial government to support postgraduate scholarships and scientific research in the universities of Ontario. It provides an information service for industry, which is supported by the Ontario Department of Planning and Development and the National Research Council.

The Hydro-Electric Power Commission of Ontario.—The Research Division of Ontario Hydro, with a staff of 300, provides services for all technical activities of the utility, in engineering design, construction work, power utilization, and system operation and maintenance. In addition to solving specific problems, the testing, investigation and research work leads to important technical advances, including the development of new and better equipment. Ontario Hydro is thus enabled both to improve the performance of the power system and to effect economies. Members of the staff maintain close contact with research organizations and other power utilities, and participate in the committee work of major technical societies and of standards associations.

Electrical investigations explore methods of generating, transmitting, distributing and utilizing power, and seek improvement in equipment for these purposes. Some of the main fields of study are transmission at extra-high voltage; electrical insulation; system operation and control, and system protection against lightning; communications and telemetering; illumination; and power metering. Attention is given to the performance and efficiency of power equipment, to improved measuring techniques, and to means of minimizing the hazards of electric shock.

Structural and mechanical studies include the following: soil mechanics as related to foundations, roads, and earth dams and dykes; the physical properties of structural components and of numerous items such as conductor joints and line hardware; the mechanical performance and safety features of equipment and various types of machines; metals and metallurgy; welding materials, techniques and applications; atmospheric and underground corrosion of metals; stresses in materials and structures; noise and vibration conditions; and a variety of problems associated with the design, construction and maintenance of concrete structures, the application of masonry materials, and the production, placement and quality control of all concrete used.

In addition to chemical analyses and tests performed on a wide range of materials and products purchased, chemical research work is conducted with regard to such subjects as wood preservation, plastics applications, protective coatings, both vegetation and insect pest control, lubrication, liquid and gaseous electrical insulants, thermal insulation, air pollution, corrosion prevention and water treatment. Other studies contributory and supplementary to the main branches of work are carried on in the fields of physics, biology, petrology, and mathematics. Operations research studies are used in determining optimum policies and procedures in vehicle replacement, inventory control, reserve transformer capacity, economic power dispatch, and schedules for pumped-storage operation.

Subsection 3.—Medical Research*

Support for research in the medical sciences is provided by the federal and provincial governments, by private foundations, by voluntary agencies and by universities and hospitals. These sources assist in establishing research fellowships for training, in providing salaries to established investigators or in the awarding of grants in aid of research in the various disciplines of the medical sciences.

---

* Prepared by Dr. J. Auer, Secretary, Medical Research Council, Ottawa.

The Departments of National Health and Welfare and of National Defence maintain well-equipped laboratories in which research is carried out by highly qualified personnel. The Department of Veterans Affairs also encourages its staff to carry out investigations in its own hospitals, mainly in the fields of chronic illness, such as arthritis, atherosclerosis, metabolic and nutritional disorders.

A great variety of medical problems are studied in the medical schools and their affiliated hospitals. In this category, funds from the federal treasury are provided through the Medical Research Council, the Defence Research Board and the Department of National Health and Welfare. The Medical Research Council, established in November 1960 following recommendations by a Special Committee of the Privy Council to review support of extramural medical research by the Government of Canada, is now thoroughly considering its policy for the future. Initially, it is continuing the policies of the former division of medical research of the National Research Council. In principle, it supports the broad field of research in the medical sciences. At present this involves assistance for research in the so-called basic medical sciences such as anatomy, physiology, biochemistry, pharmacology, bacteriology and pathology, as well as in clinical investigation and experimental surgery.

The Defence Research Board awards grants for studies which are related particularly to problems of defence, such as shock, the preservation of blood and the use of blood substitutes, the effects of low temperature, etc. The Department of National Health and Welfare provides funds for research, available on the recommendation of provincial departments of health, in the following fields: public health, tuberculosis control, child and maternal health, mental health, and general public health. It also gives assistance to the Canadian Arthritis and Rheumatism Society (which obtains other support by public subscription) and to the Ontario Heart Foundation (which derives its other resources from the Ontario Government). In addition, the Department makes available to the provinces cancer grants, out of which the provinces may supplement the research funds which the National Cancer Institute receives from the Canadian Cancer Society.

Universities also receive funds for research from provincial branches of the Canadian Cancer Society and from such government foundations as the Ontario Cancer Treatment and Research Foundation and the Alcoholism Research Foundation, from fraternal societies and clubs such as the Rotary Club, from the J. P. Bickell Foundation, the Atkinson Charitable Foundation, the Canadian Life Insurance Officers Association, the Muscular Dystrophy Association of Canada, the Banting Research Foundation, the Multiple Sclerosis Society, pharmaceutical companies, etc. At several universities, individual investigators also receive grants in aid of research from various granting bodies in the United States.

With help from these diverse sources, active research programs are in progress in every one of the twelve Canadian medical schools. In certain of these there are special departments devoted to research; these departments contain graduate students who work toward higher degrees. With few exceptions, departments designed for undergraduate instruction are active in research; a majority provide graduate instruction as well, in which the students are maintained on research fellowships or grants. In many cases, other assistants are employed under grants and thus obtain training in research.

Notable contributions to medical knowledge are made every year by Canadian scientists, but space permits the mention of only a few fields: epilepsy at the Montreal Neurological Institute; functions and interrelations of areas in the brain and brain stem and studies in neurophysiology and neurochemistry at McGill University, the University of Montreal, the University of Ottawa, the University of Western Ontario and Laval University; endocrine and metabolic studies at McGill University and the Universities of Montreal, Toronto, Western Ontario, British Columbia and Manitoba; anticoagulants at the University of Saskatchewan; atherosclerosis and hypertension at McGill and Queen's

Universities and the Universities of Western Ontario, Toronto and British Columbia; hypothermia at the University of Toronto; surgery of heart and blood-vessels at McGill University and the Universities of Toronto and Montreal, and the Montreal Institute of Cardiology; tuberculosis at Dalhousie University, the Institute of Microbiology, Montreal, and the Connaught Medical Research Laboratories, Toronto; mental health at the Nova Scotia Department of Health, the Allan Memorial Institute at McGill University, the University of Toronto, Regina General Hospital and the University of British Columbia; virology, including poliomyelitis, at the Institute of Microbiology, Montreal, the Sick Children's Hospital, Toronto, and the Connaught Medical Research Laboratories; bacteriology, immunity and hypersensitivity at McGill University, the University of Montreal, Queen's University, the University of Western Ontario and the University of Toronto; cancer in all the medical schools. Recently a growing interest is noticeable in problems of radiobiology and in medical research carried out in collaboration with engineers. It should also be noted that medical genetics, particularly with respect to the study of congenital anomalies, is developing rapidly in various centres.

Subsection 4.—University Research

Although there is considerable diversity of purpose in the aims of Canadian universities and colleges, they may be described generally as (1) the diffusion of knowledge through some teaching, extension and evening classes, and written reports; (2) the preservation of knowledge with some reorganization from time to time; and (3) the extension of the boundaries of knowledge essentially through research.

There are, of necessity, differences in emphasis in carrying out these aims. The undergraduate courses are designed to provide broad basic understanding in a variety of subject fields, to be followed by a more extensive and intensive application in one or two of them. Graduate schools provide for a broader and deeper penetration and understanding in one field, supplemented perhaps with more general knowledge in related fields. Seminars, directed study, and individual research usually form a considerable part of advanced study. Most of these courses provide for practice in the research methods of the discipline—whether through experiment, questionnaire, logic or statistics—in order to prepare students capable of adding to present knowledge. This applies to the closely knit professional fields as well as to the more general branches.

For many years research in the universities was directed toward obtaining knowledge for its own sake and was considered pure research. Later it was recognized that the conclusions of such research provided the basic information for applied science and before long the universities, because of their unique position in having trained specialists and equipment, were involved in both basic and applied research. During World War II they were encouraged to undertake emergency and other contractual research and since then the trend toward broadening the field of research, increasing the capacity of universities to educate advanced students, and procuring large-scale costly equipment has shown rapid advance. This has created new problems but has provided even greater opportunities for undertaking sizable projects which could not have been attempted otherwise and has thereby tended to knit the university into the very warp of industry.

Research conducted in the universities falls into three broad categories: projects undertaken by the student under the guidance of a professor or committee to meet requirements for an advanced degree; research undertaken by the professor, which may be of a more or less continuous nature; and larger research projects undertaken co-operatively on a faculty or interfaculty basis in university laboratories or in such specialized institutions connected with the university as medical research laboratories, institutes of microbiology and hygiene, science service laboratories and faculties of agriculture.

Some idea of the increase in research undertaken by Canadian universities may be obtained from a comparison of the situation in 1919 with that in 1959. In the former year, two universities—Toronto and McGill—offered graduate courses beyond the master's degree and graduated 11 students; in 1959 Ontario had four, Quebec three and six other provinces each had one major university offering graduate courses leading to the Ph.D. degree. They conferred 284 doctorates in course, distributed by fields as follows: biological sciences, including medical and agricultural sciences, 64; engineering and applied science, 19; humanities, 61; physical sciences, 101; and social sciences, 39. Subject matter covered in these courses and other research conducted by university professors and reported in professional journals is encyclopaedic and reflects specialization and variety. Outstanding research in particular fields has become associated with various universities, for example: nuclear research and geophysics in McGill, Queen's, McMaster and Saskatchewan; medical research in such institutions as the Connaught Laboratories and the Montreal Neurological Institute; agricultural research in the western universities; and fisheries research in British Columbia.

Outside financial support for university research comes primarily from four sources: agencies and departments of the Federal Government including the National Research Council and Defence Research Board, which provide grants for approved and contracted government-sponsored research; industry, which supports both basic and applied research; private foundations, which provide grants for approved research, sometimes in selected fields; and provincial governments.

Subsection 5.—Industrial Research

Industrial research in Canada is changing very rapidly. In the past, industry in general was largely unaware of the value of research to its own development and to that of the country, partly because many Canadian companies were subsidiaries of companies in the United Kingdom and the United States and partly because small companies found it impossible to finance their own research. The problem was accentuated by the vast size of the country, the absence of concentration of similar industries and the proximity to the relatively large research facilities of the United States.

However, the emergence of Canada as a highly industrialized society, its entrance into multitudinous fields of production, the rapid growth of many large nation-wide industries, the serving of a discriminating domestic market and the meeting of competition from abroad have had the effect of making Canadian manufacturing establishments research conscious and many of the larger ones now possess competent research organizations. The fields covered by some of these industries are outlined in the 1956 Year Book at pp. 386-389. The research work of the Pulp and Paper Research Institute, an independent corporation combining efforts of government, university and industry in the expanding field of pulp and paper research, is described in the Forestry Chapter of this volume.

Industrial Research-Development Expenditures.—In 1958 a survey was conducted by the DBS which attempted to measure the extent of the research program undertaken in the preceding year by industrial firms in Canada and to obtain an indication of its direction. Summary statistics from that survey are given in the 1960 Year Book, pp. 431-433.

A similar survey was taken in 1960 covering research expenditures in 1959, summary results of which will be carried in the 1962 Year Book and detailed statistics in DBS Reference Paper No. 75 entitled *Industrial Research-Development Expenditures, 1959* (catalogue No. 13-516).

Section 5.—Federal Government Expenditures on Scientific Activities

The Federal Government spent a total of $222,600,000 during the year ended Mar. 31, 1959* on all scientific activities, including the conduct of research-development, planning and administering research, capital expenditures on research-development plant, scientific data collection, scientific information and scholarship and fellowship programs. For the year ended Mar. 31, 1960,† such expenditures were estimated to be $212,300,000. The decrease of 4.6 p.c. was mainly accounted for by a decline in development contracts for the Armed Forces; the civilian branches of government (all departments and agencies other than the Department of National Defence‡) actually showed an increase of 16.3 p.c. from $127,000,000 to $147,700,000. With the Defence Research Board included, the increase was 14.1 p.c. from $156,300,000 to $178,300,000.

In the 1958-59 fiscal year, approximately 93 p.c. of the total funds for scientific activities were "departmental or agency funds available as a result of annual estimates", and the remainder was from other sources such as funds received direct from non-federal sources, net transfers of funds within the government, etc. For 1959-60, department or agency funds available as a result of annual estimates were estimated to account for 95 p.c. of the total funds available for scientific activities. However, the amount of such funds was lower in that year by $5,500,000, decreasing to $202,000,000 from $207,500,000 in 1958-59.

Of the total expenditures for scientific activities in 1958-59, $162,300,000 or 72.9 p.c. was for those carried on by personnel directly employed by the departments or agencies concerned; this intramural expenditure increased to an estimated $176,700,000 in 1959-60 when it accounted for 83.2 p.c. of the total. Conversely, funds for scientific activities performed by non-federal employees at outside facilities but financed by the Federal Government were substantially lower in 1959-60, profit organizations receiving $21,100,000 compared with $48,700,000 in 1958-59. On the other hand, more funds were available for educational institutions—$12,100,000 compared with $9,500,000 in 1958-59.

Funds for the physical sciences increased from $45,500,000 in 1958-59 to $55,400,000 in 1959-60, the largest portion of the increase going to the engineering group. Expenditure for the life sciences increased from $35,300,000 to $40,400,000, the most significant relative increase being for the medical sciences.

Capital expenditures on research-development plant for all departments and agencies (including the Defence Research Board but not the Armed Forces) increased from $30,600,000 in 1958-59 to $33,000,000 in 1959-60. Together, Atomic Energy of Canada Limited, the Defence Research Board, the Department of Agriculture, the Department of Mines and Technical Surveys and the National Research Council spent 90.9 p.c. of the total in 1958-59 and 93.5 p.c. in 1959-60. Armed Forces development, being largely in the form of contracts, requires little research-development plant expenditure.

Funds for other scientific activities, i.e., scientific data collection, scientific information, and scholarship and fellowship programs, amounted to $23,500,000 in 1958-59 and an estimated $27,500,000 in 1959-60. In the two years, such expenditures accounted for 10.6 p.c. and 13.0 p.c., respectively, of total funds for all scientific activities.

Excluding the Armed Forces, the Federal Government employed 14,698 persons on the conduct of research-development. Of this total, 3,871 represented professional staff and 10,827 represented supporting staff. Of the professionals, 1,504 had bachelor degrees, 994 had master degrees, and 1,373 had doctorate degrees.

---

* Actual—based on expenditures or payments made and accounted for in annual reports for the year ended Mar. 31, 1959.

† Estimates—based on the requirements for the year ended Mar. 31, 1960, tabled in the House of Commons.

‡ Includes the Defence Research Board and the Armed Forces; the former is responsible for scientific activities and the latter for development work, administration of development contracts and the collection of scientific data.

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Agriculture in Canada, though no longer supreme among the primary industries, is of major importance to the economy of the country as a whole and is still basic to many areas. The area of occupied farm land of 271,756 sq. miles (1956) amounts to only 10.7 p.c. of the total area of the provinces and has shown little increase during the past two decades, but cultivation in this static area has become greatly intensified, producing most of the food products required by a rapidly increasing population and providing surpluses of wheat and other grains, wheat flour, livestock, fruits and vegetables and of many prepared and manufactured agricultural products for world markets. The agricultural economy has been undergoing continual change ever since the pioneer farmer first began to produce more than his requirements and to desire products other than those produced on his own land, but that change has now become extremely marked. The evolution in farming practice under the impact of technological and scientific advances, its commercialization and the development of its greater interdependence on other branches of the economy are outlined in a special article entitled "The Revolution in Canadian Agriculture" appearing in the 1960 Year Book at pp. 434-439. Other articles that have appeared in previous Year Books dealing with the historical development of agriculture and with significant features of that progress are listed in Chapter XXVI under the heading "Special Material Published in Former Editions of the Year Book".

Section 1.—Federal Government in Relation to Agriculture*

The federal Department of Agriculture dates from Confederation. It was established in 1867 as an outgrowth of a Bureau of Agriculture set up in 1852 by an Act of the Legislature of the Province of Canada. The Department derives its authority from the British North America Act, 1867, which states in part that "in each province, the legislature may make laws in relation to agriculture in the province" and that "the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the legislature of a province relative to agriculture, shall have effect in and for the province as long and as far as it is not repugnant to any Act of the Parliament of Canada".

A Department of Agriculture with a Minister of Agriculture at its head was accordingly established as part of the Government of Canada. Departments of Agriculture headed by provincial Ministers of Agriculture were also set up by the provincial governments, except in the Province of Newfoundland where agricultural affairs are dealt with by the Agricultural Division of the Department of Mines and Resources. The agricultural affairs of the Yukon and Northwest Territories are administered for the Federal Government by the Territorial Division, Northern Administration Branch, Department of Northern Affairs and National Resources.

THE NATIONAL AGRICULTURAL PROGRAM

Government agricultural policy in Canada divides itself naturally into two parts. On the national scale it is aimed at the solution of broad problems that affect the country as a whole. Regional policies, applicable to regional problems, are developed in consonance with, and form an integral part of, the national policy. Basic to the concept of national policy is the premise that a stable agriculture is in the interests of the national economy and that farmers as a group are entitled to a fair share of the national income.

In pursuit of these objectives, the Department of Agriculture has carried on, over a long period, a program designed to aid agriculture through the application of scientific research and the encouragement of improved methods of production and marketing. Over the years as conditions have warranted, new programs have been initiated to deal with special situations such as the Prairie Farm Rehabilitation Act to deal with the results of the drought in the 1930's; Prairie Farm Assistance to mitigate the effects of crop failure; and Maritime Marshland Rehabilitation to save valuable soil in the Maritime Provinces. Some of these measures have been adopted into the permanent program of the Department.

While much has been accomplished under this program, changing conditions have dictated the need for a new approach. In the past two decades agriculture has undergone revolutionary changes. Large-scale mechanization, increasing farm size coupled with declining farm numbers, and shrinking world markets have called for a reappraisal of policy, resulting in a number of recent legislative enactments in the agricultural field. These have covered such matters as price stability, credit provision, crop insurance and resource development and are designed to meet the challenge of changing conditions.

The Agricultural Stabilization Act, passed in 1958, established the Agricultural Stabilization Board and provided mandatory price support for a number of farm products, the support level being related to a price formula based on the most recent ten-year average market price for the product concerned. The minimum support level on mandatory commodities is set at 80 p.c. of the average price for the preceding ten years. The Board may support the price of a product in one or more of three ways: by an offer to purchase; by the use of deficiency payments; or by making such payment for the benefit of producers as may be authorized for the purpose of stabilizing the price of an agricultural product.

---

*Prepared under the direction of S. C. Barry, Deputy Minister of Agriculture, Ottawa.

The price stabilization program has been useful in assisting the agriculture industry to make production adjustments from a position of excessive supplies to one of more normal relationship between supply and demand. Examples of this are hogs and eggs. The institution of limited deficiency payments by the Stabilization Board assisted in a necessary adjustment of production in a relatively short time. During the period of adjustment the Board guaranteed a minimum average return to producers for a limited quantity of product.

The Stabilization Board has available a revolving fund of $250,000,000. Any losses incurred through the Board's operations are made up by Parliamentary appropriations and any surplus is paid back to the Consolidated Revenue Fund. Assisting the Board in its operations is an Advisory Committee named by the Minister of Agriculture and comprised of farmers or representatives of farm organizations.

The trend toward larger farm units and greater mechanization brought with it a need for higher capitalization on many farms. To assist in meeting this need by liberalizing farm credit provisions, the Farm Credit Act was passed in 1959, establishing the Farm Credit Corporation. This body supersedes the Canadian Farm Loan Board and reports to Parliament through the Minister of Agriculture.

The Farm Credit Corporation is empowered to make long-term loans on the security of first mortgages at favourable interest rates and on more liberal terms than were possible formerly. Maximum values of ordinary loans have been raised from $15,000 to $20,000 and loans may represent 75 p.c. of the appraisal value of the security instead of 65 p.c. as was stipulated under the Farm Loan Board Act. Proceeds of the loans may be used only to acquire farm land, livestock, equipment, seed and fertilizers; to erect farm buildings; to clear, drain, fence, irrigate or otherwise improve the mortgaged land; to discharge liabilities; or for any other purposes which in the judgment of the Corporation may be necessary for the organization and efficient operation of an economic farm unit.

A new feature is provided under the Farm Credit Act—that of supervised loans. These are available only to farmers between the ages of 21 and 45. They can provide capital loans of up to $27,500 and are designed particularly to help young farmers with suitable experience to establish for themselves a profitable farm enterprise. Applicants for supervised loans must satisfy the Corporation that they have had at least five years of experience in farming. They must also agree to operate the farm under supervision of the Corporation according to an approved plan, until the principal of the loan has been reduced to 65 p.c. of the appraised value of the land. Both types of loan bear interest at 5 p.c. and are repayable within a 30-year period. All applicants for loans are required to pay an appraisal fee which will be refunded if no appraisal is made.

Provision for some form of protection against the uncertainties of the weather has long been an objective of Canadian farmers. The Prairie Farm Assistance Act, passed in 1939, affords to western grain growers a measure of relief from the results of total crop failure or disastrously low yields. The Act provides for direct money payments on an acreage-and-yield basis to growers in areas of low crop yield. A levy of 1 p.c. is made on all sales of wheat, oats, barley, rye, flaxseed and rapeseed. This money forms the basis of the fund from which payments are made and any additional sums required are provided from the federal treasury.

Useful as the Act has been, its provisions are limited in scope and are confined to the grain-growing area. To extend the benefits of insurance protection to all crops and regions, the Crop Insurance Act was passed in 1959. This Act does not set up any specific insurance scheme but rather permits the Federal Government to assist the provinces to do so by making direct contributions toward the cost of providing crop insurance. The initiative lies with the province. Schemes may be organized on the basis of specific crops or areas within the province and agreements between provinces and the Federal Government set out the terms of the insurance coverage.

Contributions from the federal treasury are limited to 50 p.c. of the administrative costs incurred by the province and 20 p.c. of the amount of premiums paid within the year. In addition, the Federal Government may make loans to any province equal to 75 p.c. of the amount by which the indemnities required to be paid under policies of insurance exceed the aggregate of: the premium receipts for that year; the reserve for the payment of indemnities; and $200,000. A feature of the Crop Insurance Act is that those who take advantage of an insurance scheme set up under the Act are not eligible for any payments under the Prairie Farm Assistance Act.

Because of its pre-eminence as Canada's most important single crop and leading agricultural export, wheat figures prominently in agricultural policy-making. Under the Canadian Wheat Board Act, all wheat going into commercial channels is marketed through the Wheat Board. Actual selling is done either directly to a buyer for another government or, more commonly, by members of the grain trade acting as agents for the Board.

The prices received by the Wheat Board are determined by competitive conditions in world markets. Payment to producers is made in two stages. An initial payment price is established early in the crop year and this becomes a guaranteed floor price that the grower receives as an interim payment if market conditions warrant it. When the grain is sold a final payment is made, representing the grower's share of any surplus resulting from the sale, less the handling costs. Besides the actual selling, the Wheat Board is responsible for regulating the flow of grain into marketing positions under a quota system. Since supplies exceed the available markets, much of the grain must be stored on farms for varying periods. To offset the hardship that might result, provision is made for the payment of cash advances on farm-stored grain under the Prairie Grain Advance Payments Act proclaimed in 1957.

A further measure of relief for grain growers was provided by means of an acreage payment plan. Under the plan each producer named in a Canadian Wheat Board permit book became eligible to receive a payment of one dollar per cultivated acre listed in his permit book, up to a maximum of 200 acres. Payments were made in 1958 and again in 1960.

For many years, activities connected with the marketing of Canadian grain have been associated with the Department of Trade and Commerce. During 1960, the operations of the Board of Grain Commissioners and the Canadian Wheat Board were transferred to the jurisdiction of the Minister of Agriculture. Thus the grading and marketing of all agricultural products are now unified under the direction of one Minister.

New legislation introduced in 1961 will become an important element in agricultural policy. This is the Agricultural Rehabilitation and Development Act, designed to assist farmers with small or otherwise unprofitable units to add to their incomes through alternative land use or supplementary employment opportunities, and to promote the conservation of soil and water resources. This Act is enabling legislation, authorizing the Government to enter into agreements with provincial governments or agencies for the joint undertaking of: (1) projects for the alternative use of lands classified as marginal or of low productivity; (2) projects for the development of income and employment opportunities for rural agricultural areas; and (3) projects for the development and conservation of soil and water resources of Canada.

Alternative use of land unsuitable for profitable agriculture in Eastern Canada may involve the encouragement of farm woodlots, of tree farming on a more extensive scale or of the development of recreational facilities. In the West, marginal cropping land may be restored to permanent grass through the extension of community pastures. In addition to developing alternative uses for unproductive land, the program envisages the creation of new income opportunities for people in rural areas through the encouragement of local industry and technical training facilities.

The conservation of soil and water resources for agricultural purposes, the third major objective of the legislation, is not new. For years, activities under the Prairie Farm Rehabilitation Act and the Maritime Marshland Rehabilitation Act have been directed toward this end but these were regional undertakings. Under the Agricultural Rehabilitation and Development Act, soil and water conservation as an aid to agriculture will be extended to cover the whole country so that it will be possible for agriculture throughout Canada to enjoy the benefits of resource conservation.

Subsection 1.—Services of the Department of Agriculture

Broadly speaking, the activities of the Department of Agriculture may be grouped under three headings: research, promotional and regulatory services, and assistance programs. Research work is aimed at the solution of practical farm problems through the application of fundamental scientific research to all aspects of soil management and crop and animal production. Promotional and regulatory services are directed toward the prevention or eradication of crop and livestock pests, the inspection and grading of agricultural products and the establishment of sound policies for crop and livestock improvement. Assistance programs cover the sphere of soil and water conservation, price stability, provision of credit, and a degree of crop insurance and income security in the event of crop failure. The Department employs a staff of more than 9,000 persons.

The organization of the Department comprises three branches—Research, Production and Marketing, and Administration. Other activities closely allied with the Department, and responsible to the Minister of Agriculture are those of the Farm Credit Corporation, the Board of Grain Commissioners and the Canadian Wheat Board (see pp. 400-401 and Index).

Research Branch.—The Research Branch is the principal research agency of the Department. It conducts a broad program of scientific investigation covering both basic studies and practical attacks on agricultural problems. There are seven Research Institutes at Ottawa; three Research Institutes, nine Regional Research Stations, six Research Laboratories, 26 Experimental Farms, two Forest Nursery Stations, and 21 Substations are located throughout the ten provinces and the Yukon and Northwest Territories.

The Research Branch serves all principal agricultural areas in Canada and co-ordinates its efforts with those of the National Research Council, universities and kindred agencies. One staff group is charged with the planning and co-ordination of the program and another with the administration required to carry it out. Four directors, representing divisions of animals, crops, soils, entomology and plant pathology, assist the programming of the work. Three research services—statistics, engineering, and analytical chemistry, located with the administrative and executive group at Ottawa—provide research groups across the country with specialized leadership and service and undertake critical researches or other creative work as required.

The Institutes.—The Institutes are organized on a scientific rather than a problem basis and are engaged primarily on basic research of wide application to agriculture. They also carry out related national work such as the identification of plants, insects and pathogens. There are seven Institutes at Ottawa and one each at London, Belleville and Sault Ste. Marie, all in Ontario.

The Animal Research Institute covers the fields of genetics and breeding, nutrition, physiology, biochemistry and management, and tackles problems in the production of milk, beef, lamb, pork, poultry, eggs and fur.

Plant studies are carried out at the Plant Research Institute and the Genetics and Plant Breeding Research Institute in taxonomy, physiology, biochemistry, pathology, agrometeorology, weeds, and fruit and vegetable processing and storage. Cytological and genetic studies on cereal, forage, tobacco and horticultural plants are made by the Genetics and Plant Breeding Research Institute with special reference to problems encountered in the breeding programs and the assessment of quality characteristics.

The Soils Research Institute is engaged in studying genesis and classification, fertility, mineralogy and the organic, physiochemical and physical aspects of soils. This Institute gives leadership to the federal-provincial soil survey program through classification studies and by developing and standardizing analytical methods. It also provides a national soil-mapping service.

A major section of the Entomological Research Institute deals with taxonomy, other assignments being in the fields of genetics, physiology, nematology and apiculture. The Institute assembles and maintains the national collection of insects.

The Microbiological Research Institute is mainly concerned with metabolism, nutrition and genetics of bacteria of agricultural significance.

The Dairy Technology Research Institute investigates problems in sanitary milk production and the processing of dairy products and undertakes projects to improve existing dairy products and to develop new ones.

The Pesticide Research Institute at London examines chemicals used or intended to be used for insect, disease or weed control and investigates the reason for and the nature of the biological activity of the chemical.

The Biological Control Research Institute at Belleville is concerned with efforts to control destructive insect pests and noxious weeds with parasitic and predaceous insects, and with insect disease organisms. It is also the principal importing centre for beneficial insects and for some disease organisms from foreign countries.

The Insect Pathology Research Institute at Sault Ste. Marie is the major importing centre for disease organisms. Insect diseases, including those caused by viruses, fungi, bacteria and protozoa are studied.

The Regional Research Stations and Laboratories cope with primary problems in various regions in all provinces. Other units have undertaken projects assisting in the exploitation of peat bogs, reclamation of marshland for pasture, propagation of shelter-belt trees and prevention of soil erosion, dryland agriculture, the growing of special crops such as tobacco, and livestock breeding.

Production and Marketing Branch.—The Production and Marketing Branch conducts the promotional and regulatory functions of the Department. Its seven Divisions administer legislation and policies in the fields of agricultural production, marketing and control of disease in plants and animals. Three Sections—Consumer, Markets Information, and Transportation, Storage and Retail Inspection—carry on activities in their respective fields.

The Health of Animals Division administers the Animal Contagious Diseases Act and the Meat Inspection Act and also operates animal pathology laboratories. Besides its responsibility in carrying out various disease prevention measures, the Division operates programs for the eradication of bovine tuberculosis and brucellosis and issues health certificates for livestock entering export trade. The animal pathology laboratories, in addition to their research function, manufacture diagnostic reagents and biological products and provide analytical and diagnostic services for diseases of domestic and wild animals. District laboratories across the country give routine diagnostic and research services.

The Livestock Division administers legislation dealing with the grading of meat, wool and fur, with the registration of livestock pedigrees, with performance testing of cattle and hogs and with the supervision of racetrack betting. Other activities include the promotion of livestock improvement and the compilation of market statistics.

The Poultry Division carries out the policies of the national poultry breeding program, including Record of Performance for poultry and hatchery inspection, and administers the regulations for the grading of poultry products.

The Fruit and Vegetable Division administers legislation having to do with the grading of fruits and vegetables in both fresh and processed form, maple products and honey. The Division is responsible for the licensing of interprovincial and international brokers who deal in fresh fruits and vegetables.

The Dairy Products Division is responsible for the administration of legislation covering grades and standards for dairy products, including butter, cheese, concentrated milk products and ice cream.

The Plant Products Division administers Acts and regulations respecting seeds, feedstuffs, fertilizers and pest-control products, conducts field inspection and maintains regional testing laboratories.

The Plant Protection Division is responsible, under the Destructive Insect and Pest Act, for safeguarding against the introduction of serious plant insects or diseases into Canada or their spread in Canada, for certifying freedom from disease and pests in plant exports, and for seed potato certification.

The Markets Information Section is responsible for the compilation and distribution of market information respecting livestock, meats and wool, dairy products, eggs and poultry, and fruits and vegetables.

The Consumer Section helps to promote proper use of Canadian agricultural food products through experimental work, carried on by its home economists, on the cooking of foods and the preserving of perishables.

The Transportation, Storage and Retail Inspection Section administers the payment of subsidies for the construction of public cold storage facilities; cargo inspectors at the main Canadian ports check the handling of goods moving to export; and other inspectors in the principal marketing areas make spot checks on retail outlets to see that food products meet the prescribed standards of quality and grade.

Agricultural Stabilization Board.—The functions and operations of this Board, established in 1958 under the Agricultural Stabilization Act for the purpose of supporting the prices of agricultural products, are described at pp. 399-400.

Agricultural Products Board.—The Agricultural Products Board, first established in 1951 under the Emergency Powers Act, was reappointed under the Agricultural Products Board Act dated Jan. 23, 1952. The Board was established as an auxiliary or facilitating body for the purpose of purchasing, selling or delivering agricultural products pursuant to any agreement or contract made by the Government of Canada as may seem appropriate, as agent for the Agricultural Stabilization Board.

Administration Branch.—In addition to its general responsibility for the business management of the Department, the Administration Branch embraces the Division concerned with Information and Economics. Administration of the rehabilitation and assistance programs is also associated with this Branch.

The Economics Division collects, analyses and interprets economic information required to form and administer departmental policies and programs. It conducts economic surveys and research designed to improve agricultural production, marketing, and farm living conditions. The Division acts as an economic and statistical research agency for the Agricultural Stabilization Board, the Prairie Farm Rehabilitation Administration and other bodies, assisting in any economic undertaking with which the Department is concerned.

The Information Division gathers and publishes information arising from research work and the development and regulatory programs of the Department. It employs all the recognized media—printed publications, press and radio releases, motion pictures and television. In addition, the Division operates the central library of the Department and a system of field libraries located at major research centres of the Department across Canada.

Subsection 2.—Farm Credit and Assistance

The Federal Government has made provision for the extension of credit to farmers under the Farm Credit Act and under the Farm Improvement Loans Act. Cash advances are made to grain producers under the terms of the Prairie Grain Advance Payments Act and certain financial assistance in event of crop failure is provided by the Prairie Farm Assistance Act. These measures are discussed in detail below and, with the exception of the Farm Improvement Loans Act, are also mentioned in the special article on the National Agricultural Program, pp. 399–402. Also discussed in that article are the Crop Insurance Act, and the new Agricultural Rehabilitation and Development Act introduced in 1961 to assist farmers with small or otherwise unprofitable units to add to their incomes.

In addition to the above, legislation has been passed from time to time giving assistance to meet temporary or short-term contingencies, such as the Western Grain Producers Acreage Payment Regulations which, following the drought in 1957, provided for the payment to each grain producer of $1 for each acre seeded in 1958 up to an amount of $200; and the Prairie Grain Loans Act which provided for short-term credit to grain producers of the Prairie Provinces to meet temporary difficulties encountered during the 1959-60 crop year from inability to thresh their grain.

The Farm Credit Act.*—The object of the Farm Credit Act (SC 1959, c. 43, proclaimed Oct. 5, 1959), to be effected by the Farm Credit Corporation, is to assist Canadian farmers in the voluntary reorganization of their industry into economic family farm units, each of which will be of sufficient size to produce the farm income necessary to pay all operating and maintenance costs; to provide an adequate livelihood for the owner-operator and his dependants; and to retire any required credit, with interest, within an appropriate term.

The Act provides two types of long-term mortgage loans. Under Part II of the Act, the Corporation may lend up to 75 p.c. of the appraised value of the farm land taken as security, or $20,000, whichever is the lesser, repayable within a period of up to 30 years. Under Part III of the Act, the Corporation is empowered to make loans of up to 75 p.c. of the value of the farm land and chattels taken as security, or $27,500, whichever is the lesser, to young farmers aged 21 to 44 inclusive and who have at least five years of experience in farming; that portion of the loan secured by farm land is repayable within a period of up to 30 years and that portion (if any) based on chattel security must be repaid within the first ten years. A Part III loan is further secured by mandatory insurance upon the life of the borrower, and his farming operations are subject to supervision by the Corporation until the loan has been reduced to 65 p.c. of the appraised value of the farm land. Similar insurance coverage is available to Part II borrowers on an optional basis. The interest rate on all loans is fixed by the Act at 5 p.c.

The Corporation, in co-operation with the Veterans' Land Act Administration, has established 198 local Federal Farm Credit offices in agricultural communities throughout the country, each served by a resident Farm Credit Adviser. The Credit Advisers are available to advise and assist local farmers in estimating their credit needs, in planning farm operations, and in making constructive loan applications based on the careful appraisal of agricultural productivity, and to provide counsel and supervision to borrowers.

Funds for lending are borrowed at current interest rates from the Minister of Finance. The aggregate amount of such borrowings at any time outstanding may not exceed 25 times the capital of the Corporation, which has been fixed by the Act at $8,000,000.

In the year ended Mar. 31, 1960, the Farm Credit Corporation approved 5,339 loans for a total of $40,031,250 as compared with 4,805 loans for a total of $30,144,950 in the preceding year. At Mar. 31, 1960, the total amount of principal outstanding in loans was $117,233,247 as compared with $89,301,022 the previous year. This amount was secured by 28,453 first mortgages and 505 second mortgages.

---

*This Act repealed the Canadian Farm Loan Act, 1927.

Totals	**3,702**	**21,278,450**	**4,805**	**30,144,950**	**5,339**	**40,031,250**

[1] Repealed by the Farm Credit Act, proclaimed Oct. 5, 1959.

The Farm Improvement Loans Act.—The Farm Improvement Loans Act (RSC 1952, c. 110), administered by the Department of Finance, is designed to provide credit by way of loans made by the chartered banks to assist in almost every conceivable purchase or project for the improvement or development of a farm and includes the purchase of agricultural implements, the purchase of livestock, the purchase and installation of agricultural equipment or a farm electric system, the erection or construction of fencing or works for drainage on a farm, and the construction, repair or alteration of farm buildings including the family dwelling. Credit is provided on security related to the purchase or project and on terms suited to the individual borrower.

The legislation, originally operative for three years (1945-48), has been continuous by way of extensions usually for three-year periods. The latest extension was for the period commencing Apr. 1, 1959 and ending June 30, 1962. Under that extension, full-time beekeepers are made eligible for loans and the maximum loan or amount available at any one time to a borrower is increased from $5,000 to $7,500. The maximum term of a loan and the interest rate remain at ten years and 5 p.c. simple interest, respectively.

The borrower is required to provide from 10 p.c. to 40 p.c. of the cost of his purchase or project, depending on the loan category to which it belongs. The Federal Government guarantees each bank against loss sustained by it up to an amount equal to 10 p.c. of loans granted by it in a lending period. This guarantee does not apply to any loan made after the aggregate of all loans made by all banks in a given period reaches an amount fixed by statute. The current maximum stands at $300,000,000. By Dec. 31, 1959, 1,544 claims amounting to $1,025,188 had been paid under the guarantee since the inception of the Act, representing a net loss ratio of less than one-tenth of one per cent after recoveries have been taken into account.

By the end of 1959, $751,615,581 or 82.4 p.c. of the total loans made had been repaid. The position at that time was as follows:—

Period	*Loans Outstanding*	*P.C. of Total Loans Outstanding*
	$	
1945–48	2,770	0.01
1948–51	190,068	0.14

Prairie Grain Advance Payments Act.—This Act, which came into force on Nov. 25, 1957, provides for an advance payment to producers for threshed grain (wheat, oats and barley) in storage other than in an elevator and prior to delivery to the Canadian Wheat Board, exclusive of grain deliverable under a unit quota. Advance payments of 50 cents per bu. of wheat, 25 cents per bu. of oats and 35 cents per bu. of barley are made, subject to certain restrictions as to quota and acreage. Maximum advance payment per application is $3,000. At Dec. 31, 1960, the following advance payments had been made:—

Period	*Applications*	*Total Advance*	*Average Advance*
	No.	$	$
Aug. 1, 1957—July 31, 1958	50,412	35,203,467	698
Aug. 1, 1958—July 31, 1959	45,341	34,369,654	758
Aug. 1, 1959—July 31, 1960	50,047	38,492,505	769
Aug. 1, 1960—Dec. 31, 1960	67,677	57,984,073	859

Repayment is effected by deducting 50 p.c. of the initial payment for all grain delivered subsequent to the loan, other than for grain delivered under a unit quota. The amounts deducted are paid to the Board until the producer has discharged his advance. At Dec. 31, 1960, refunds had been made as follows:—

Period	*Total Refunded*	*Total Advance Outstanding*	*Percentage Refunded*
	$	$	
Aug. 1, 1957—July 31, 1958	35,189,079	14,388	99.9
Aug. 1, 1958—July 31, 1959	34,299,832	69,821	99.8
Aug. 1, 1959—July 31, 1960	38,131,615	360,890	99.0
Aug. 1, 1960—Dec. 31, 1960	13,437,179	44,546,894	23.1

Prairie Farm Assistance Act.—The Prairie Farm Assistance Act, passed in 1939, provides for direct money payments by the Federal Government on an acreage-and-yield basis to farmers in areas of low crop yield in the Prairie Provinces and in the Peace River area of British Columbia. Its purpose is to assist in dealing with a relief problem which the provinces and municipalities could not do alone and to enable the farmers to put in a crop the following year. Payments for the 1959 crop as at July 31, 1960 totalled $20,429,463. Total payments made under the Act since 1939 amounted to $248,208,345.

Payments are made from the Prairie Farm Emergency Fund to which farmers contribute 1 p.c. of the value of all sales of wheat, oats, barley, rye, flaxseed and rapeseed. The additional funds required are provided from the federal treasury. The total collected through the 1-p.c. levy in 1959 was $6,326,924. The total amount collected since 1939 was $120,312,114.

The average yield of wheat in a township or block of sections is the basis on which payments are made. If the average yield is eight bushels per acre or less, all farmers within that area receive payments except those on the sections having a yield of 12 or more bushels per acre. The smallest isolated block eligible for payment is one-third of a township (12 sections) provided such block is rectangular in shape. A block as small as one section within an ineligible township is eligible for payment if a side lies along the boundary of an eligible township.

If an area consisting of one-third or more of the cultivated lands in any six or more adjoining sections could not be seeded or summerfallowed because of flooding or other natural causes beyond the control of the farmers, such area is eligible for award at $4 per acre on one-half of the cultivated acreage of each farmer. Only those farmers who make their homes and are ordinarily present in the spring wheat area are eligible for award and no award can be made with respect to more than 200 acres of the cultivated land of a farmer.

There are three categories of payments: (1) if the average yield of wheat for the township or block of sections, excluding those sections having a yield of 12 or more bushels per acre, is more than five and not more than eight bushels per acre, the payment is $2 per acre on one-half of the total cultivated acreage of the farmer; (2) if the average yield of wheat for the township or block of sections, excluding those sections having a yield of 12 or more bushels per acre, is more than three and not more than five bushels per acre, the payment is $3 per acre on one-half of the total cultivated acreage of the farmer; (3) if the average yield of wheat for the township or block of sections, excluding those sections having a yield of 12 or more bushels per acre, is three bushels or less per acre, the payment is $4 per acre on one-half of the total cultivated acreage of the farmer.

In the zero-to-five-bushel categories the minimum payment is $200, although a farm must have at least 25 acres under cultivation other than land that is seeded to grass, or be in the development stage, to qualify for this minimum award.

Subsection 3.—Canada's Relationship with FAO

The Food and Agriculture Organization of the United Nations, at present consisting of 82 member governments, was created for the purpose of promoting national and international action to improve the efficiency of the production, processing, distribution and utilization of all food and agricultural products, with the aim of assisting all countries to raise the levels of nutrition and standards of living of their people. It collects and disseminates information to help its member governments and others who wish it to improve their methods of cultivation, fishing, forestry, marketing, agricultural credit and so on. It is called upon to contribute in many ways to the development and co-ordination of national agricultural programs and policies.

The Conference of the FAO meets every two years and its Council, made up of 25 member nations, meets about twice a year or whenever necessary. The Conference reviews the world situation in food, agriculture, fisheries and forestry as well as the operation of the FAO Secretariat. The Council, meeting more frequently, keeps an eye on price trends and supplies.

The actual day-to-day work of the Organization is carried out by more than 1,500 staff members assigned to Headquarters and the five Regional Offices. Over 50 nationalities are represented on the staff. The Organization has been reorganized during the past two years and is divided into two departments consisting of 10 technical divisions covering the following: Land and Water Development; Plant Production and Protection; Animal Production and Health; Rural Institutions and Services; Forestry and Forest Products; Fisheries; Statistics; Economic Analysis; Commodities; and Nutrition; and one service department which deals with matters related to administration of meetings and protocol and includes divisions covering information, publications, preparation of reports on rural legislation and a library.

There are also over 50 committees consisting of technicians representing member nations who are interested in specific problems. These include: the Committee on Commodity Problems; the International Rice Commission; the FAO Desert Locust Control Committee; the Fisheries Council; FAO Liaison Committee on Fishery Products Technology; European Commission for the Control of Foot-and-Mouth Disease; the Regional Forestry Commissions; etc.

FAO also administers a Technical Assistance Program with about 600 technical assistance experts assigned to field projects in about 70 countries or political subdivisions. New activities have come out of the recently established United Nations Special Fund. By the end of 1960, FAO had been asked to administer a number of major capital projects.

The Organization's current operating resources are $9,225,500 per year. In addition, an amount almost equal to the regular budgetary total is allocated to FAO by the United Nations Technical Assistance Administration and the Special Fund.

Activities.—FAO acts as an instrument of collaboration in the effort to control pests and disease. Throughout the Middle East, international control and prevention measures, co-ordinated by FAO, are aimed at controlling locusts. The European Commission for the Control of Foot-and-Mouth Disease, created in 1952 under FAO auspices, is working toward the complete eradication of the disease. Another field for greater international action is the development of river basins and watersheds affecting several countries. Along with other UN agencies, FAO is studying the land and water development potentialities of the Mekong Valley at the request of the Governments of Viet Nam, Cambodia, Laos, and Thailand. Studies are being made in respect of fishing boats and fish harbours. The items mentioned are only a few illustrations of the scope of the technical activities of the FAO.

The FAO functions as a co-ordinating centre for the collection and dissemination of scientific and technical information in the field of atomic energy and of the possible contribution of atomic energy to the progress of agriculture and related industries. The FAO and the International Atomic Energy Agency have signed an agreement which affords the official basis for co-operation between these two organizations.

The Organization has undertaken a Freedom-from-Hunger Campaign to focus public attention on a world-wide scale upon the continuing problem of hunger and to mobilize national and international effort toward its solution. The Campaign will be a continuing activity up to 1965. The Campaign will consider not only ways of increasing agricultural production and income and of raising buying power for food but also will recognize the need for industrial development so as to increase purchasing power and ability to buy food, especially in the less developed countries. The improvement of nutrition also would cover not only the problem of providing more and better food but the social implications of better nutrition on the position of various groups such as farmers and fishermen.

Commodity Review.—The work of the FAO Conference, the Council and the Committee on Commodity Problems in the commodity field may be summarized as follows: (1) making a periodic review of the commodity situation; (2) providing a forum for discussing problems, exchanging views and studying national policies; (3) sponsoring specialized commodity study groups; (4) reviewing proposals for action and making recommendations; (5) publishing reports on commodity policies and developments; (6) co-operating with other international commodity agencies in the preparation and review of commodity situation reports and in the consideration of proposals for action programs.

A major activity is the study of the problem of commodity surpluses by the Sub-Committee on Surplus Disposal located in Washington, which is concerned with ways and means of using surpluses to establish national food reserves and/or to finance economic development in under-developed countries. Special aspects of the surplus problem are also the concern of other FAO commodity groups, such as the Group on Grains which has undertaken study of the causes of the present imbalance in the wheat and coarse grains situation, and the commodity groups concerned with rice, copra, cocoa, dairy products and citrus fruits.

Canada and the FAO.—Canada's interest in the FAO began with the Hot Springs Conference. The United Nations Interim Commission on Food and Agriculture was established by this Conference and was headed by a Canadian. It laid the groundwork for the first FAO Conference which was held at Quebec City in 1945. In the same year the Canadian Parliament passed the Food and Agriculture Organization of the United Nations Act which provided for the carrying into effect of the "Agreement for a Food and Agriculture Organization of the United Nations between Canada and certain other Nations and Authorities". This Act approves the Constitution of the Food and Agriculture Organization and empowers the Governor in Council to make such appointments, establish such offices, make such Orders in Council, and do such things as appear necessary for carrying out the provisions of the Constitution.

Canada is a member of the Council, the Committee on Commodity Problems (CCP), the Consultative Sub-Committee on Surplus Disposal, the FAO Group on Grains, the Committee on Constitutional and Legal Matters, and the North American Forestry Commission, and is participating in a number of working parties sponsored by the FAO dealing with a variety of problems.

Over 100 Canadians have been on FAO technical assignments since 1951. For some of these experts there were repeat performances. Others have been invited to participate on panels of experts dealing with nutrition, plant protection, forestry, fisheries and atomic energy. A number of Canadians are on the staff at Headquarters in Rome.

Early in 1946, member nations were invited to establish the National FAO Committees to maintain liaison between FAO Headquarters and their respective governments. In accordance with this request, a Canadian Interdepartmental FAO Committee was formed to provide a link between the FAO and the Canadian Government on questions pertaining to FAO. The Committee is composed of senior government officials representing the Departments of Agriculture, Fisheries, Forestry, National Health and Welfare (Nutrition), Trade and Commerce, External Affairs, Finance, and the Dominion Bureau of Statistics.

Section 2.—Provincial Governments in Relation to Agriculture*

Subsection 1.—Agricultural Services

Newfoundland.—Government agricultural services in Newfoundland are operated by the Agricultural Division of the Department of Mines and Resources. The Division is in charge of a Director who is assisted by a staff of 21 officers. For purposes of administration, the province is divided into nine districts. A fieldman with permanent headquarters is located in each district except Labrador, where the officer is resident for the summer only. Officers in charge of different phases of agricultural development visit each district on assignments from the St. John's office.

Departmental policies in support of the agricultural industry include: a bonus of $125 an acre on land cleared by privately owned equipment; the distribution of ground limestone at a subsidized rate; the payment of bonuses on purebred sires; and financial assistance to agricultural societies, marketing organizations and exhibition committees. An inspection service is provided for poultry products, vegetables and blueberries, production of the latter being encouraged by the burning of suitable berry areas and the improvement of roads and trails leading to them. Small fruit development is promoted through the distribution of quality foundation stock.

Every encouragement is given to the production of livestock. An experimental sheep flock is maintained. Poultry and beef production have increased with favourable marketing conditions and with departmental assistance and loans under the Provincial Farm Development Loan Act. A veterinary supervises the health of animals program and the joint federal-provincial project for the eradication of bovine tuberculosis.

The Agricultural Division co-operates with the Department of Education in furthering the 4-H Club movement in the province and accepts responsibility for all projects pertaining to agriculture.

Prince Edward Island.—The activities of the provincial Department of Agriculture are suggested by its staff which includes, in addition to the Minister and Deputy Minister, a Dairy Superintendent and Assistant, two Check Testers, two Dairy Herd Improvement Promoters, a Director of Veterinary Services and nine subsidized practising veterinarians, a Horticulturist, a Soil Analysis Assistant, a Poultry Fieldman, an Economist, two Agronomists, a Director of 4-H Clubs, three Agricultural Representatives, a Nursery Supervisor, and a Director, an Assistant Director and two Extension Workers of Women's Institutes.

---

*Information supplied by the agricultural authorities of the various provinces.

Nova Scotia.—The Department of Agriculture and Marketing endeavours to "help the people to help themselves" through strengthening member interest in such organizations as the Nova Scotia Federation of Agriculture, the Nova Scotia Fruit Growers' Association, various agricultural co-operative organizations, credit unions and producer organizations. The Department is assisted by the Nova Scotia Advisory Committee on Agricultural Services which has been established to promote agricultural policies and projects of the federal and the provincial Departments of Agriculture. The Committee meets quarterly to determine how the work of these Departments may be co-ordinated and directed through integrated agricultural policies and with a minimum duplication of services.

New Brunswick.—Provincial government agricultural policy in New Brunswick is directed by the Department of Agriculture. The Department is headed by the Minister of Agriculture who is assisted by a Deputy Minister and the Directors of the following Branches: extension, livestock, dairy, veterinary, poultry, horticulture, field husbandry, potato and plant protection, agricultural engineering, home economics, credit union and co-operative, and agricultural education.

Quebec.—The Department of Agriculture of Quebec comprises 11 services: rural education, rural economy, extension, animal husbandry, horticulture, field husbandry, information and research, home economics, animal health, drainage, and the secretariat. Each service is divided into sections dealing with particular problems.

The Department also includes many other special organizations such as the Research Council, the Dairy Industry Commission, the Dairy School of St. Hyacinthe, the Provincial Extension Farm (Deschambault), the Fur Bearing Animals Extension Farm (St. Louis de Courville). The Farm Credit Bureau, the Quebec Sugar Refinery (St. Hilaire), the Provincial Veterinary School (St. Hyacinthe) and the Office of Rural Electrification are also under the authority of the Minister of Agriculture.

The annual competition for the Agricultural Merit Order, organized in 1890, is held successively in each of five regions. Each contest lasts five years and covers various farm enterprises; its objective is to ascertain the personal merit of the competitors who have most distinguished themselves in the agricultural field and can serve as examples. County Farm Improvement Contests have for 30 years promoted better methods of culture designed to increase farm income and 7,530 competitors have benefited from them.

The Drainage Service deals with soil improvement or land reclamation by renting equipment at very low rates to farmers who wish to improve their crop lands. The Department of Agriculture also gives assistance to such projects in the form of grants. Soil improvement measures include large drainage projects carried out by the Department and smaller projects carried out by groups of farmers with government help. In 1958, 44,209 farmers benefited from help given by this service.

Various forms of assistance are offered toward improvement of crops and livestock. An artificial insemination station operates at St. Hyacinthe for the benefit of breeders' clubs, and plant breeding stations for cereal and forage crops, vegetables and small fruits are maintained in a number of localities. Trained specialists are employed in the work of controlling plant and animal pests and diseases; the main laboratories are situated at Quebec City and field laboratories are located in other districts.

Agricultural co-operation is widespread in Quebec. There are 508 co-operatives with 69,829 members and 89 agricultural societies with 28,452 members to serve local interests and organize county exhibitions. There are also 713 Cercles de Fermières (rural women's clubs) in operation with a membership of 36,903; 425 farmer clubs with a membership of 20,182; and 316 junior farmer clubs in which 8,607 young boys and girls are working on numerous practical agricultural projects.

The Farm Credit Bureau was established in 1936. By December 1958 the Bureau had made 56,660 loans to farmers amounting to a total of $165,427,000; 26,531 of these loans were for the establishment of young men on farms or for farm enlargement.

An Agricultural Research Council was established by the Department in 1957. It is a consultative body composed of professors from the senior agricultural colleges of the province. It has no laboratories but encourages research in all fields of agriculture, by means of subsidies to the faculties of agriculture of the provincial universities, to be carried out under the supervision of the university staffs. The Council also has a scholarship plan to encourage the education of young agricultural scientists. The findings of research projects undertaken under the auspices of the Department of Agriculture are published by the Council in *Recherches agronomiques.*

Ontario.—The Ontario Department of Agriculture provides financial assistance and administrative services through its Head Office, nine Branches, two Experimental Farms, and through research and extension work carried out at the Ontario Agricultural College, the Ontario Veterinary College, Macdonald Institute, Western Ontario Agricultural School, the Kemptville Agricultural School and the Horticultural Experiment Station.

The Department is divided into two main Divisions—the Division of Production and the Division of Marketing. Each is under the direction of an Assistant Deputy Minister, directly responsible to the Deputy Minister. The Division of Production is composed of the Live Stock Branch, Extension Branch, Agricultural and Horticultural Societies Branch, Field Crops Branch, Farm Economics and Statistics Branch, and the Milk Production Program. The Division of Marketing administers the affairs of the Markets Branch, Dairy Branch, Co-operative Loans Board, Milk Industry Board, Farm Products Marketing Board, Ontario Stock Yards Board, Ontario Food Terminal Board, and the Farm Products Inspection Service.

The Live Stock Branch promotes livestock improvement policies with particular attention to the health of animals, gives support to purebred livestock associations, licenses artificial insemination centres, community sales, wool warehousemen and egg grading stations.

Through a staff of Agricultural Representatives, one of whom is located in each county and district, the Extension Branch carries on an educational and extension service, gives leadership to 4-H Club work and to the Ontario Junior Farmers' Association. This Branch also administers policies providing assistance to farmers and settlers in northern Ontario in connection with land clearing and breaking and improvement of farms and livestock. The Home Economics Service, which is part of the Extension Branch, gives leadership to organized activities of rural women.

The Agricultural and Horticultural Societies Branch provides assistance to agricultural and horticultural fairs and exhibitions, ploughing matches and other competitions and administers the Community Centres Act.

The Field Crops Branch assists in the development of good cultural practices, promotes the use of improved strains of seed and works for the improvement of pastures. It also administers the Weed Control Act.

The Farm Economics and Statistics Branch carries on research in farm business including cost analysis, marketing, and land use. In co-operation with the Dominion Bureau of Statistics it gathers and publishes statistics of agricultural production.

The Markets Branch administers the Farm Products Marketing Act; the Farm Products Grades and Sales Act; the Co-operative Loans Act; the Grain Elevator Storage Act; and the Farm Products Containers Act.

The Dairy Branch provides an inspection, instruction and supervision service to all dairy factories and promotes the production of clean milk on farms. The Milk Industry Board of Ontario, functioning under the authority of the Milk Industry Act, regulates and supervises the marketing of milk and cream.

The Information Branch prepares and distributes—through press, radio, television and publications—information of value to producers and consumers of Ontario's farm products.

The Ontario Agricultural College, including Macdonald Institute and the Ontario Veterinary College, all located at Guelph, provides research and extension services to Ontario agriculture, as do the Horticultural Experiment Station at Vineland, the Western Ontario Agricultural School and Experimental Farm at Ridgetown, and the Kemptville Agricultural School at Kemptville. Demonstration Farms in northern Ontario, one at New Liskeard and another at Sault Ste. Marie, are operated for the demonstration of methods adaptable to the area concerned, present emphasis being on beef cattle production. Supervision of the schools and colleges, experimental farms, and the Ontario Telephone Authority is the direct responsibility of the Deputy Minister of the Department.

Manitoba.—The Department of Agriculture and Conservation serves Manitoba through the following branches: agricultural extension; livestock; dairy; soils, crops and weeds administration; agricultural publications, statistics and radio and information service; co-operative services; the provincial veterinary laboratory; and water control and conservation.

The Extension Service deals with agricultural economics, horticulture, poultry, agricultural engineering, beekeeping, 4-H Clubs and women's work, and has specialists devoting attention to these subjects. Meetings, field days and short courses are held. Thirty-five agricultural representatives are located throughout the province, each serving from one to five municipalities; 12 home economists serve designated areas.

The Live Stock Branch administers the Animal Husbandry Act, develops and administers policies that encourage the improvement and production of livestock, and works in close co-operation with the Veterinary Laboratory Service and the federal Health of Animals Division in the control of livestock diseases.

The Dairy Branch administers the Dairy Act, supervises the grading of cream, inspects creameries and cheese factories, gives instruction in cheese and butter making, issues licences to makers of dairy products and to cream graders and conducts a dairy-cost study among milk producers. Extension activities include addressing meetings and preparing articles and leaflets on dairy farm problems.

The Soils and Crops Branch deals with grain and forage crops, conservation and fertility and provides liaison between the Government of Manitoba and the Government of Canada in regard to PFRA projects. The Branch develops and administers policies that encourage good field crop husbandry and conservation practices. The Weeds Section directs the activities of 18 municipal weed control units comprising 70 rural municipalities engaged in eradicating deep-rooted, persistent, perennial weeds; supervising weed demonstrations; investigating weed problems; conducting weed surveys; and preparing weed literature, mounted weed specimens, etc.

The Agricultural Publications and Statistics Branch publishes and distributes annually approximately 100,000 bulletins, circulars, posters, leaflets, etc. It provides the public with agricultural statistics relating to Manitoba agriculture, and maintains an information service which uses the media of the press, radio and TV.

The Co-operative Services Branch takes care of the registration and supervision of co-operatives and credit unions and the administration of the Acts governing them. The Branch also collects and compiles statistics on co-operative activity throughout the province.

The Veterinary Laboratory operates a diagnostic laboratory for animal diseases, the services of which are available to veterinarians and livestock owners.

The Water Control and Conservation Branch administers, through the Water Rights and the Water Power Acts, the water resources of the province and all works in connection with the control and utilization of those resources. Through the Departmental Act and other associated statutes, provision is made for the construction of works to control and use water, and to provide technical and financial assistance to junior levels of government for construction, maintenance, and operation of such works.

Saskatchewan.—The Saskatchewan Department of Agriculture is organized in the following branches and services.

The Administration Branch handles general staff records and accounts. Data on crop conditions, production, marketings and income are collected and farm information dispensed daily over seven private radio stations.

The Agricultural Representative Service has a technical staff of 58, comprising a director, an assistant director, 40 agricultural representatives, six assistant agricultural representatives, four area supervisors, five farm management specialists and one audio-visual aids supervisor. This extension field staff serves all branches of the Department as well as the other agencies operating within the Co-operative Agricultural Extension Program. Agricultural representatives are active in all federal, provincial and university farm services; they work through Agricultural Conservation and Improvement Committees in each rural municipality and local improvement district to supply the farmer with scientific and practical information. Committees study local farm problems and initiate improvement programs. District Boards, with representatives from each municipality, assist the agricultural representative in planning and developing a district agricultural improvement program. Through an Earned Assistance Program, the Department pays one-half the cost of local group development projects. In farm labour matters, co-operation is maintained with the federal Department of Labour and the National Employment Service in directing annual movements of farm labour in and out of the province.

The Animal Industry Branch has four divisions: the Dairy Division administers dairy herd improvement programs, assists producers with management and production problems, inspects and licenses dairy manufacturing and frozen-food locker plants, and administers dairy, locker plant and margarine legislation; the Livestock Division encourages the use of suitable animals for breeding purposes by the establishment of purebred sire areas and by assistance in the purchase and distribution of stallions, bulls, boars and rams, and registers brands, licenses livestock dealers and agents and promotes programs on insect control, feeding and management; the Poultry Division maintains poultry and turkey testing and banding services under Saskatchewan Hatchery Supply Flock Policies, licenses produce dealers and poultry buyers, hatcheries and hatchery agents, assists with poultry shows and field days, and otherwise promotes flock improvement; the Veterinary Division assists students in veterinary science under a scholarship plan, administers the Veterinary Service District Act, disease testing and vaccination programs, and co-operates with Federal Government officials and local veterinarians in disease prevention and control.

The Conservation and Development Branch provides engineering services for irrigation development, usually in co-operation with the Federal Government, and for drainage programs and projects. Reclamation of land by drainage, development of misused land and under-utilized land, and construction of provincial community pastures all come within its jurisdiction. The Branch provides engineering assistance to conservation and development areas, water users' districts, and irrigation districts in connection with water control projects.

The Lands Branch administers Crown, school and Land Utilization Board lands, except forest reserves and parks in the settled area of the province; classifies it according to the use for which it is best suited; disposes of such lands under long-term leases; secures land control for land utilization projects; supervises new settlement projects; pays for clearing and breaking by farmers on provincial leases; and operates provincial community pastures.

The Plant Industry Branch organizes and administers programs for crop improvement and crop protection, and advises on seed and crop improvement, soil conservation, horticultural problems, and weed and pest control. The improvement of grassland is promoted through a forage crop program. The Seed Plant Division carries on custom cleaning of forage seeds and registered cereals. The Apiary Division advises on beekeeping and honey production and carries on continuous inspection.

The Agricultural Machinery Administration conducts a testing service, publishes reports on farm machinery, and licenses dealers in farm machinery.

The Family Farm Improvement Branch, newly established, assists farmers by providing technical services and financial assistance with farmstead development. The Branch specializes in such farmstead problems as buildings, water and sewage works, household problems, vegetation used in the farmyard, and materials handling. The Farm Water and Sewage Program is the first major program to be undertaken by the Branch.

Alberta.—The Alberta Department of Agriculture is organized in the following branches and services.

The Field Crops Branch administers programs and policies relating to crop improvement, soil conservation and weed control, crop protection and pest control, horticulture and apiculture. Agricultural Service Boards have been organized in municipal districts to assist with agricultural programs, and the Department of Agriculture is represented on each Board.

The Live Stock Branch aids in maintaining the quality of herds and flocks by assisting farmers in securing purebred herd sires and assists artificial breeding associations in the breeding of dairy cattle. The Branch also supervises livestock feeder associations and administers legislation relating to stock inspection, brands, domestic animals and the sale of horned cattle.

The Dairy Branch administers the Dairymen's Act and the Frozen Food Locker Act. Grading and purchasing of raw produce by all dairy plants are under regulation, as are standards of construction, manufacture, processing, sanitation, and temperature control for dairies and frozen-food lockers. A regular cow-testing service is available to dairy producers and the Branch laboratory conducts chemical and bacteriological analyses needed for industrial directives. Yearly cost studies and dairy farm management services are in operation in the principal milk-producing areas.

The Poultry Branch carries on programs for the improvement of poultry husbandry and supervises flock approval for the control of pullorum disease. The Branch issues hatchery, wholesale, first receiver and trucker licences for the handling of poultry products.

The Veterinary Services Branch provides scientific diagnoses of livestock and poultry diseases through its laboratory; conducts investigations of disease conditions; lectures in veterinary science at the University of Alberta, Schools of Agriculture, and many meetings; and promotes government policies aimed at reducing losses throughout the province.

The Agricultural Extension Service operates 43 offices and employs the services of 56 district agriculturists and 21 district home economists. The district agriculturists assist farmers with their problems and advance departmental policies designed to improve the standard of agricultural practices. The district home economists provide a similar service for farm women. Bulletins are prepared dealing with agricultural and home economics topics. The Branch is responsible for the supervision of agricultural societies and, in co-operation with the federal Department of Labour, is concerned with recruitment and placement of farm labour.

The Fur Farms Branch administers the licensing and exporting of live animals and pelts, and assists fur farmers in care, management and stock improvement; the Radio and Information Branch conducts five broadcasts a week over seven radio stations and issues weekly bulletins to press and radio; the Water Resources Branch deals with water rights, drainage, irrigation, and water power development; the Land and Forests Utilization

Committee (composed of representatives from the Department of Lands and Forests, Power Commission, Department of Municipal Affairs, University of Alberta and Department of Agriculture) deals with the proper use of submarginal agricultural land; and the Farm Economics Branch, formed Jan. 1, 1961, studies various economic farm problems and advises farmers on management techniques.

Credit is made available to young farmers for the purchase of farm lands under the Farm Purchase Credit Act and the Farm Home Improvement Act. Schools of Agriculture and Home Economics are operated at Olds and Vermilion (see p. 419).

British Columbia.—The Department of Agriculture has four main branches. The Administrative Branch is responsible for the general direction of agricultural policies, the administration of legislation affecting agriculture and the compilation of reports and publications. This Branch also maintains direct supervision of the Field Crops, Soil Survey, Plant Pathology, Entomology, Apiary, Markets and Statistics, Farmers' Institutes and Women's Institutes Branches.

The Livestock Branch engages in the promotion and supervision of the livestock industry and provides veterinary services affecting disease control regulations; its work also includes supervision of stock brands, inspection of dairy and fur farm premises, and inspection of beef grading. In addition, the Branch supervises the operations of the Dairy Branch in the inspection of commercial dairy premises. Officials are stationed at 11 centres throughout the province.

The Horticulture Branch supervises fruit, vegetable and seed production, and provides advice on plant diseases and insect pest control. The Branch maintains field offices at 10 points in the southerly section of the province.

The Agricultural Development and Extension Branch offers general information services to farmers through 19 offices which cover all major farming districts. In addition, this Branch provides agricultural engineering service, supervision of the government land-clearing program, and farm labour services and promotes junior club projects. The Poultry Branch offers extension services to the poultry industry.

Subsection 2.—Agricultural Colleges and Schools

All provinces provide facilities or assistance for training in agricultural science at university level. The colleges and schools are administered by either the Department of Agriculture or the Department of Education of the respective province.

Newfoundland.—There are no agricultural colleges in the province but the Agriculture Division of the Department of Mines and Resources provides a number of scholarships annually for young men to attend agricultural colleges in other provinces.

Prince Edward Island.—A two-year course in scientific agriculture offered at Prince of Wales College, Charlottetown, prepares students for third year at Macdonald College, Que. In the Vocational School, short courses provide knowledge and skill in agricultural pursuits and develop in the student a sense of the dignity and importance of agriculture as a calling and an understanding of the value of the industry to the province.

Nova Scotia.—The Nova Scotia Agricultural College at Truro offers two courses: the first two years of a degree course in agriculture; and a two-year course in vocational agriculture. The College assists in conducting short courses at various provincial centres, supports Folk Schools and gives direction to 4-H Club organizations. Tuition is free for Canadian students.

New Brunswick.—The four agricultural schools of New Brunswick are located at Woodstock, Fredericton, St. Joseph and St. Basile. Two-term agricultural courses extending over five months each year are offered at Fredericton, St. Joseph and St. Basile and a three-year course is conducted at Woodstock. The curriculum includes training in all phases of agriculture, shop and general academic work. Ten-month home economics courses are also offered at Woodstock and St. Joseph.

Quebec.—Four-year university courses leading to a degree of Bachelor of Science in Agriculture are available through Laval Faculty of Agriculture (Ste. Anne de la Pocatière), l'Institut Agricole d'Oka (affiliated with the University of Montreal), and McGill Faculty of Agriculture (Macdonald College). The Provincial Veterinary School at St. Hyacinthe (affiliated with the University of Montreal) offers a four-year course leading to a doctorate in veterinary medicine. There are also 16 secondary agricultural schools throughout the province, and five orphanages offer courses in agriculture. About 1,500 students, the great majority of whom are sons of farmers, attend these intermediate or regional schools of agriculture and 230 pupils follow practical agricultural courses in the orphanages. A farm is always annexed to the school for practical training and specialists give instruction on the maple-sugar industry, farm mechanics, co-operatives, plant protection, veterinary hygiene, aviculture, marketing and silviculture. School co-operatives and clubs are organized and directed by the pupils under supervision. Household science training for the daughters of farmers and settlers is given in nine of these schools.

Ontario.—A two-year course at the Ontario Agricultural College (for the Associate Diploma in Agriculture) provides basic training for young persons interested in making agriculture their vocation. Study includes the application of science to agricultural practice and training for rural citizenship. A four-year course at the same institution for the degree of Bachelor of Science in Agriculture gives fundamental education in the science of agriculture. Sound training is provided for farming as a profession, for entrance into all agricultural services, industry and teaching, and for those who wish to proceed to graduate studies for master's and doctorate degrees. Graduate courses are offered leading to the degree of Master of Science in Agriculture. Graduate students are enrolled in a department or departments of the Ontario Agricultural College conjointly with a department or departments of the University of Toronto for advanced courses of study and training in experimentation and scientific investigation. M.S.A. graduates may go into teaching, research or postgraduate study.

Macdonald Institute offers two main courses in home economics for young women. The one-year course of practical training in the art and science of homemaking earns a diploma of merit but gives no professional standing. The four-year professional course leads to a Bachelor of Household Science degree granted by the University of Toronto. University matriculation standing (nine papers of grade 13) is necessary to enter the four-year course. At its completion, Food Administration Option graduates are eligible to work in the professional dietetic and food-service fields. These graduates and those of the Clothing and Textiles Option and the Home Management Option are finding increasing employment in many areas, notably in the education, extension, business and research fields.

The Ontario Veterinary College offers a five-year course leading to the degree of Doctor of Veterinary Medicine. In addition to its function as a teaching institution, the College is a research centre for animal diseases and provides free consultation services for veterinary surgeons in practice as well as extension services in the interests of the livestock industry.

The Kemptville Agricultural School offers: a diploma course in agriculture comprised of two six-month terms, giving practical training in modern farming methods and community leadership, and designed primarily for young people who wish to farm but serving also as a preparation for many other occupations closely connected with agriculture; a six-month advanced course in agricultural mechanics for diploma graduates in agriculture; a six-month homemaker course leading to a diploma in homemaking and qualification for positions in fields of home economics; a diploma course comprised of two six-month terms for girls wishing to prepare for positions in the food services, sewing centres, tourist trade and other fields of home economics. In addition, a three-month course is given for dairy apprentices, leading to the Dairy School Diploma required for certified buttermakers, cheesemakers and operators of dairy manufacturing plants. A 450-acre farm and residence life are features of the Kemptville Agricultural School.

The Western Ontario Agricultural School at Ridgetown offers a two-year diploma course (October to April), which gives practical training in modern farming methods and prepares young men to serve agriculture in allied occupations. The facilities comprise a group of modern buildings, including a residence and dining hall, modern classrooms, laboratories, and athletic facilities. There is a 425-acre farm with up-to-date equipment, much of which is used for student activity and for practical demonstrations. A full complement of livestock is maintained on this farm for carrying out the school program.

Manitoba.—The Faculty of Agriculture and Home Economics of the University of Manitoba offers degree courses in agriculture and home economics as well as a two-year, sub-collegiate diploma course in agriculture. Practical short courses in agriculture and homemaking are also given at the Agricultural Extension Centre at Brandon.

Saskatchewan.—The University of Saskatchewan offers a degree course in agriculture designed to meet the needs of those who intend to teach agriculture in secondary schools or colleges, to engage in research extension or administrative work, or to farm. Specialization is possible with permission of the faculty. Provision is made for combined courses in agriculture and arts or commerce. Postgraduate courses are available.

The Saskatchewan School of Agriculture offers a practical course intended to give sound training in farm practice and also to train young men in rural leadership.

All courses leading to a degree in home economics require four years. The prescribed course of studies for the first two years is the same for all pupils but in the third and fourth years four types are offered: (1) for teachers, (2) for dietitians, (3) general, and (4) additional specializations. A combined course leading to a degree in arts and science and home economics requires at least five years.

Alberta.—The University of Alberta offers a four-year degree course in agriculture to students with senior matriculation or its equivalent. Students may elect a general program or major in a wide range of special courses in the fields of animal science, economics, entomology, dairying, plant science, and soils. Graduate work at the master level is offered in all departments and at the doctorate level in some.

The Alberta Schools of Agriculture and Home Economics, located at Olds and Vermilion, offer practical courses in agriculture and homemaking. The purpose of the schools is to train young men for farming and young women for homemaking. Students must have grade 9 standing for entrance into the regular two-term course. A one-year course is offered to those who have 70 or more high school credits. Living accommodation is provided as well as auditorium and gymnasium facilities.

During the summer months the schools are used for agricultural meetings and conferences of organizations that are connected with agriculture. During the month of July, leadership courses, 4-H Club gatherings, farm camps and other events keep the facilities in constant operation.

British Columbia.—The Faculty of Agriculture at the University of British Columbia offers a four-year general degree course in agriculture and a five-year honours course. In the honours course there are 15 fields in which a student may specialize. Work is also offered by the Faculty of Agriculture in the Faculty of Graduate Studies through which a student may proceed to the degrees of Master of Science in Agriculture and Master of Science; in a limited number of fields, work is offered at the doctorate level. The Faculty also offers a one-year or two-year diploma course in occupational agriculture, adaptable to the needs of individual students.

In co-operation with various branches of the provincial Department of Agriculture and under the auspices of the University Extension Department, the Faculty of Agriculture also offers a number of short courses which vary in length from one or two days to several weeks.

Section 3.—Land and Water Conservation*

Subsection 1.—Federal Projects

Twenty-five years have passed since the inception of the Prairie Farm Rehabilitation program in 1935 to deal with the immediate problems of drought and soil drifting which were then having a severe effect on agriculture on the Canadian prairies. Since that time many policies and projects have been undertaken, varying widely in nature and scope, but basically they have all had one objective—better land utilization and more efficient use of available water resources as a means of providing greater security and stability to prairie agriculture.

In this connection, much progress has been made and much valuable knowledge and experience has been gained on which to base long-range land and water conservation planning in Western Canada. This work has involved the introduction of those systems of farming, land use, and water supply that would provide greater economic security for the agricultural population on the prairies and, more recently, the development of larger and more comprehensive land utilization and water development schemes that will serve entire agricultural districts and prairie communities.

Cultural improvements have led to an almost completely new approach to the economics and practice of dryland farming. Techniques in soil management and methods of making more efficient use of limited supplies of available soil moisture have been developed and are in common use, helping materially to minimize the drought problem in drier areas. The development of assured farm water supplies throughout the drought region for domestic, stockwatering and irrigation purposes has also contributed greatly to a more stable agriculture over a wide area. In particular, the development of assured feed supplies through irrigation for the winter feeding of livestock and the provision of reserves of feed to carry livestock over periodic dry periods has given much greater stability to the livestock industry and has been a major factor in encouraging agricultural diversification in the plains region.

Finally, the permanent removal from cultivation of lands that have proven submarginal for cereal crop production, the fencing, regrassing and other improvement of such areas for community pasture purposes, and the resettlement and rehabilitation of farmers operating such lands, principally to irrigation projects, have been major factors in bringing about necessary adjustments in the pattern of land use on the prairies.

Where these adjustments have been of considerable benefit to the agricultural economy, new and growing demands for water required by larger municipal and urban centres for domestic and industrial purposes, as well as to support large-scale irrigation, have made necessary the development of larger and more comprehensive water storage and irrigation schemes where more dependable and plentiful water supplies can be obtained. PFRA in more recent years has devoted an increasing amount of its attention to this type of development.

---

* Except as otherwise credited, prepared under the direction of S. C. Barry, Deputy Minister of Agriculture, Ottawa.

Prairie Farm Rehabilitation Act

Under the terms of the Prairie Farm Rehabilitation Act, an initial appropriation of $4,750,000 was made to cover the cost of rehabilitation activities for a period of five years, and an Advisory Committee was established to give leadership to the program. Rather than establish new services, existing agricultural services were given assistance to expand their operations to handle the work, particularly the Experimental Farms Service. As the PFRA program developed, a separate administration was set up in Regina (in 1936) to direct water development, while the cultural improvement program continued under the direction of the Experimental Farms Service. Then, by amendment to the Act in 1937, the PFRA was extended to include land utilization and resettlement. It was realized, however, that for the development of a sound agricultural economy on the prairies, more long-term measures for rehabilitation would be necessary. In 1939 therefore, additional financial allocations were made and the five-year limitation to the PFRA was removed.

Water Development.—Projects constructed under the water development program and carried out under the supervision of the Water Development Division of the Agricultural Services Branch, are divided into two main categories according to size of project, number of people benefiting, and cost of construction: (1) individual and neighbour projects and (2) community projects.

Individual and neighbour projects are works serving the needs of one or two farmers. They are generally in the form of small dams and dug-outs that supply water for stockwatering and domestic use and/or for irrigation purposes. PFRA provides all engineering services required to plan and design such projects and a portion of the construction costs. The rate of assistance paid on individual projects is based on yardage of earth moved and amounts to seven cents per cubic yard up to a maximum of $250 for dug-outs, $300 for stockwatering dams and $600 for irrigation projects. Where two or more farmers pool their water resources to build neighbour projects, assistance is paid up to a maximum of $1,000. Responsibility for the actual construction is left to the farmer who either contracts the work out or builds the project himself.

Community projects utilize the waters of well-defined watersheds and are built to serve the needs of groups of farmers. Each project is justified on the basis of its individual merit and the major share of cost is borne by PFRA.

During the 25 years in which PFRA has been engaged in this work, the program has resulted in the construction of more than 65,000 individual and neighbour projects and about 800 community water storage and development schemes.

Major Projects.—While the immediate needs of farmers are being met by PFRA, attention has also been given in more recent years to the construction of larger irrigation and reclamation projects involving the development of many thousands of acres of land. Such undertakings are in line with the long-range land-use plan to provide for expansion and stability in Canada's growing economy. Of an estimated 3,000,000 acres of potentially irrigable land in Western Canada, 1,500,000 acres have been, or are in process of being developed. The intention is, when conditions warrant, to develop the remainder of this valuable resource.

The development of these large irrigation and reclamation works in Western Canada which, either because of their size or their location, have not been included under the regular PFRA appropriation, have been in recent years under the supervision of the Prairie Farm Rehabilitation Administration. They are undertaken by agreement between the Federal Government and the provincial government concerned, on a cost-sharing basis. Special authorization of Parliament is required for such construction.

St. Mary Project.—To make available for irrigation a larger percentage of the water flowing through southern Alberta in the Waterton, Belly, St. Mary and Milk Rivers, a program to extend the original St. Mary Irrigation Project was undertaken by an agreement between the Government of Canada and the Province of Alberta. The Federal

Government agreed to construct the main supply reservoirs and the connecting canals, while the Province of Alberta undertook the responsibility for construction of the irrigation distribution system. When completed, this project will extend irrigation to approximately 510,000 acres of land in the area south of Lethbridge and east beyond Medicine Hat.

Construction of the St. Mary Dam, key structure on the whole project, was completed in 1951. During 1958 the second phase, involving the diversion of the Belly River into the St. Mary Reservoir, was completed. The third step, involving the diversion of the Waterton River into the St. Mary Reservoir by way of the Belly River diversion, is under construction. The present storage and distribution facilities extend irrigation to 296,000 acres of land in the St. Mary Project. With the addition of resources of the Waterton River, a further 214,000 acres of land can be brought under irrigation.

Bow River Project.—The Bow River Irrigation Project, situated west of Medicine Hat in Alberta and having an irrigation potential of 240,000 acres, was taken over by the Federal Government from the Canada Land and Irrigation Company in 1951; the Company had developed about 57,000 acres before financial difficulties caused work to be suspended. PFRA commenced the orderly rehabilitation of the project works and is proceeding with the development of the remainder of the area. The Federal Government is responsible for settlement of the areas surrounding Vauxhall and Hays. These areas have provided farms for 436 settlers, 162 of whom have now been established in the Hays district.

South Saskatchewan River Development Project.—In July 1958 agreement was reached between the Federal Government and the Province of Saskatchewan to start construction on the South Saskatchewan River Project, a large-scale multi-purpose water conservation project proposed for development in south-central Saskatchewan. The purpose of the project is to make better use of the water resources of the river through irrigation, river control, power, urban water supply and recreation. Control will be achieved by two dams, the major one on the South Saskatchewan River at a point approximately half-way between the towns of Outlook and Elbow and the other at the divide between the valleys of the South Saskatchewan and the Qu'Appelle Rivers. The agreement provides that Canada and Saskatchewan will share the cost of building the dams and all other works associated with the creation of the reservoir; 75 p.c will be borne by the Federal Government and 25 p.c. by Saskatchewan, the province's share to be not in excess of $25,000,000.

The project, when completed, will provide water for the irrigation of approximately 500,000 acres of land located in central Saskatchewan on both sides of the South Saskatchewan River between the town of Elbow and the city of Saskatoon and in the Qu'Appelle Valley extending east of Elbow to the Manitoba border. Power installations at the damsite will have a potential output of 475,000,000 kwh. The reservoir, which will be 140 miles long and will store 8,000,000 acre-feet of water, will be constructed at an estimated cost of $96,000,000. The main dam will be 210 feet high and of earth fill, with an over-all length of 16,700 feet. It will be the largest rolled-earth dam ever built in Canada and one of the largest dams of its kind in the world.

Construction was started in the autumn of 1958 and at Dec. 31, 1960, 20 contracts totalling about $25,000,000 had been let. Of these, 15 contracts had been completed, four were in progress on a winter-work basis, and one had been suspended until spring. The value of the completed contracts was $9,382,802. Contracts awarded but not yet completed account for a further amount of about $15,600,000. Partial payments have been made on these contracts, bringing the total expenditure to the end of 1960 to over $16,300,000. In addition to paying 75 p.c. of the cost of construction of the dam, the Federal Government is supplying all engineering, administration and supervisory requirements. To Dec. 31, these totalled approximately $3,400,000, an amount included in the total expenditure.

Saskatchewan River Reclamation Project.—The possibility of successfully reclaiming for agricultural purposes 1,500,000 acres of potentially valuable Saskatchewan River Delta land between Tobin Rapids in Saskatchewan and Cedar Lake in Manitoba has been a subject of speculation and conjecture for many years. With this objective in mind the PFRA began investigations in 1950 and a complete engineering report on the studies conducted has been prepared and submitted to the Federal Government for consideration. In addition, as a result of an agreement reached early in 1953 between the Government of Canada and the Province of Manitoba, work was undertaken on the construction of necessary flood control and drainage works to reclaim about 100,000 acres of arable land in one region of the project referred to as the Pasquia Area, near the town of The Pas in Manitoba. Under the terms of this agreement, the Government of Canada assumed the cost of building the main protective and drainage works and Manitoba the cost of settlement, maintenance of works, and internal drainage. One-quarter of the reclaimed land is to be used for the resettlement of farmers from drought areas and the remainder will be sold. Seventy-five per cent of the proceeds from the sale of the land will go to the Federal Government as partial reimbursement of the costs of building the main protective works. Construction was completed in 1960. Settlement of the area will begin shortly.

North West Escarpment Reclamation Project.—At the request of the Manitoba Government, extensive investigations have been undertaken by PFRA in the Riding, Duck and Porcupine Mountain areas and Whitemud River watershed, where serious flood and erosion problems exist in an area containing over 252,000 acres of valuable agricultural land. The reclamation work, the cost of which is divided equally between the Federal Government and the Province of Manitoba, consists of clearing and dyking stream channels, preventing stream-bank erosion and aligning channels by building cutoffs and diversions. In addition, considerable attention has been given, since 1958, to watershed investigations on the headwaters of Wilson Creek, to discover improved methods of controlling floods and erosion problems in the upper and lower reaches of such streams.

Assiniboine River Project.—Along the Assiniboine River between Portage la Prairie and Headingly in Manitoba, a continual problem of flooding has faced farmers and communities over the years, often causing considerable damage to land, buildings and other property in districts adjacent to the river. During the early years, the federal Department of Public Works looked after most of the flood protection work carried out in the area. In 1950, however, responsibility for the work was transferred to the federal Department of Agriculture under the Prairie Farm Rehabilitation Administration.

Flood control activities carried out by the PFRA along the Assiniboine have mainly involved construction of dykes and channel improvement work. In addition, however, a considerable amount of survey work has been conducted on both the upper and lower reaches of the river, studying potential storage sites that would provide more effective stream-flow regulation throughout the river system.

Land Utilization and Resettlement.—The 1937 amendment to the Prairie Farm Rehabilitation Act broadened its scope to include land utilization and land settlement, opening the way for a program that has had a far reaching effect on the stability of agricultural production in many areas throughout Western Canada. By agreement with the Provinces of Saskatchewan and Manitoba, lands not considered suitable for cereal crop production may be transferred to the Federal Government for development by PFRA into community pastures. The province concerned selects the area to be developed and obtains control of the land. The land is then leased to the Government of Canada which in turn agrees to construct, maintain and improve community pasture facilities in the area selected. In this way, land subject to the hazards of soil drifting is removed permanently from cultivation and is again protected by a grass cover.

As these submarginal and marginal lands are converted into productive pastures, livestock production on the surrounding farms is being increased, thus making possible a greater diversity of farm income. Since the community pasture program began in 1937, a total of 1,886,364 acres of land has been developed into 65 separate pasture units. These pastures, primarily intended for reserve grazing areas to supplement farm and ranch pastures, are now providing controlled spring, summer and fall grazing for over 120,000 head of stock annually, belonging to 6,331 farmers. In addition, a considerable tonnage of hay and some grass seed has frequently been harvested from these pastures. This program of pasture improvement carried on by PFRA has provided leadership to farmers in the development of their own farm pastures.

The resettlement of farmers from these submarginal areas has been handled jointly by the Federal Government and provincial governments concerned. Where available, the provincial governments provide suitable Crown land on which to resettle farmers. PFRA in turn accepts responsibility for moving the farmers and their effects to the new locations, and for developing the submarginal areas for pasture purposes. Every effort is made to resettle farmers on lands located close to existing or proposed pastures. Where no suitable Crown lands are available, PFRA provides its own through irrigation development. Two such schemes have been built specifically for resettlement purposes in Alberta: a large block of land adjacent to the Eastern Irrigation District called the Rolling Hills Project, to which 118 farm families from the drought areas have been moved; and the Bow River Irrigation Project where 162 farm families are now settled in an area of approximately 27,000 acres called the Hays district.

On somewhat the same principal, five resettlement and rehabilitation projects have been built in the heart of the drought area in southwestern Saskatchewan. The only difference is that for these projects the purposes and objectives of the resettlement and rehabilitation program have been achieved without necessarily involving the movement of farmers to new locations. The five schemes—the Val Marie, Eastend, Consul, Maple Creek and Swift Current Irrigation Projects—are subdivided into 40-to-80-acre plots which are leased out or sold to farmers in surrounding districts for feed production. On the irrigated land, farmers can be assured of producing adequate and dependable winter feed supplies as well as reserves of feed to carry stock over prolonged drought periods.

In a similar manner hundreds of farmers have been rehabilitated without the necessity of moving from their farms by the development of farm-size and small community irrigation schemes built throughout the prairies with PFRA assistance.

British Columbia Projects.—The Prairie Farm Rehabilitation Administration has been carrying out irrigation development and land reclamation and providing engineering services in British Columbia since 1944; this work has been undertaken for and in connection with the Veterans' Land Act, the Experimental Farms Service, and at the request of the Province of British Columbia.

Nine irrigation projects have been developed or rehabilitated in the arid central interior of the province. The irrigable land on these projects totals approximately 5,300 acres and provides direct or supplemental living for some 1,400 families engaged mainly in the growing of small fruits and vegetables and in dairying.

Seven of these irrigation projects were constructed for the Veterans' Land Act following the Second World War and benefit approximately 500 veterans. The Johnson Western Canada Ranching Projects, Nos. 1 and 2 (Todd Hill Irrigation District), and the Chase Irrigation Project are located in the South Thompson Valley. The Cawston Benches Project, Westbank Project, Penticton West Bench Project and Bankhead Project are all located in the southern Okanagan Valley and form some of the largest individual developments for veteran settlement in Canada.

The other two developments are located in the Thompson Valley near Kamloops and were constructed in co-operation with the Province of British Columbia. The B.C. Fruitlands Irrigation District includes some 2,000 acres of irrigable land and also some 700 small holdings. This district had been served by a gravity water system from Jamieson Creek for over 40 years which had deteriorated to such an extent that the district could no longer guarantee water to its users. The rehabilitation of this project was undertaken by agreement with the province and the irrigation district concerned, and completed by PFRA in 1958. A pressure irrigation system was also installed by PFRA for the irrigation of 290 acres of the Provincial Sanatorium farm lands at Tranquille.

A major reclamation project was undertaken in the Lillooet Valley upon agreement between the Federal Government, the Government of British Columbia, and the Pemberton Valley Dyking District. This project involved the reclamation of the lower 20 miles of the Lillooet River Valley through dyking, drainage and channel improvement to reclaim some 12,000 acres of agricultural land and to protect an additional 2,000 acres already under cultivation.

Engineering services have been provided by PFRA to the Experimental Farms and to other government agencies as requested. Some of these services have included surveys in the Fraser River Basin for the federal-provincial Fraser River Board, reports on proposed project development and reclamation in British Columbia, and services to the Experimental Farms for the establishment and improvement of farm water supplies and irrigation systems.

Maritime Marshland Rehabilitation Act

The MMRA program was instituted by federal legislation in 1948 to provide assistance to the Provinces of Nova Scotia, New Brunswick and Prince Edward Island in preserving and developing tidal marshland areas, most of which are situated adjacent to tributaries of the Bay of Fundy. The areas are subject to flooding by tide water unless protected by systems of dams or dykes and aboiteaux (freshwater control structures). The soils are potentially productive and when properly used yield excellent crops.

Responsibility for the rehabilitation of approved marshland areas is shared by the provincial and federal governments. The latter undertakes the construction of works required to prevent flooding of lands by saltwater, maintains the structures until this responsibility is turned over to the provinces, and provides engineering services required in connection with the program. The provincial governments organize the owners of land and ensure that the marshland areas are adequately drained and that suitable land-use policies are developed and encouraged.

By Mar. 31, 1960, the provinces had requested the protection of some 95,450 acres from saltwater flooding. Structures had been completed to protect 76,813 acres and plans were under way to reclaim an additional 3,750 acres (Nova Scotia, 43,635 acres; New Brunswick, 36,653 acres; and Prince Edward Island, 275 acres). This acreage forms parts of approximately 3,500 farms having a total area of over 450,000 acres.

Conventional structures for the protection of marshlands are normally considered to be dykes and aboiteaux, supplemented by stream-bank control works. It has been found feasible to construct aboiteaux or dams across some tidal streams which eliminate the need for dykes and aboiteaux upstream of the proposed site and permit more efficient drainage of the land protected. Two of the more important structures of this type are the Annapolis River Dam in Nova Scotia and the Tantramar River Dam in New Brunswick, both in full operation. Each was undertaken on a share basis with a provincial authority as they serve as river crossings for traffic and eliminate the need to rebuild highway bridges at these locations in the future. The structures consist of rock-fill dams and freshwater discharge control gates; they were constructed on tidal rivers having tide ranges in excess of 30 feet and 40 feet, respectively. The addition of power-generating facilities to harness some of the energy produced by the tide at Annapolis Royal, N.S., was studied and found possible, but the cost was too high to warrant further consideration.

Canada Water Conservation Assistance Act*

To help municipal and provincial governments with financing major water conservation and control projects the Canada Water Conservation Assistance Act was passed by Parliament in 1953. Under the Act, the Federal Government may enter into an agreement with any province providing up to 37½ p.c. of the cost of a major water conservation project that is considered to be beyond the normal financial means of the provincial and municipal governments involved.

During 1961, the Federal Government signed three agreements with the Government of Ontario providing federal financial participation in three major water conservation projects. In each project, the estimated cost was distributed among the federal and provincial governments and a conservation authority, the two governments each contributing 37½ p.c. of the cost and the conservation authority the remaining 25 p.c.

The first agreement under the Act was signed Jan. 28, 1961, providing federal assistance to a $9,640,500 flood control and water conservation project in the Upper Thames River basin. The Upper Thames River Conservation Authority, a grouping of 31 municipalities, will pay 25 p.c. of the cost of construction of five dams and three channel improvement works included in the project and will administer the completed project. Construction of the works will be spaced over a 10-year period.

Other agreements signed between Canada and Ontario provided for federal cost-sharing in the construction of the $825,000 Parkhill Dams in the Ausable River watershed in western Ontario and the $24,000,000 flood control and water conservation works that will be built along the Humber and Don Rivers in the Metropolitan Toronto area. The conservation authorities involved in these projects are, respectively, the Ausable River Conservation Authority and the Metropolitan Toronto and Region Conservation Authority.

To be eligible for federal assistance under the Canada Water Conservation Assistance Act, a project must meet three conditions. The works must be designed primarily for flood control or other beneficial uses. It must be major in character in relation to the financial capability of the province entering into the agreement. It also must be beneficial to a community as a whole. The Act requires that complementary conservation measures be carried out in addition to the primary flood control and water conservation works.

Prior to the passing of this legislation, the Federal Government provided 37½ p.c. of the cost of building the Shand and Luther Marsh Dams on the Grand River, the Conestogo Dam on the Conestogo River, and the Fanshawe Dam on the Thames River.

Subsection 2.—Provincial Projects

Saskatchewan.†—The Conservation and Development Branch of the Saskatchewan Department of Agriculture was established in 1949 to administer water rights in the province and to carry on an active program in irrigation, drainage, flood control and land reclamation and development. Program emphasis has varied from year to year; drainage and flood control were of greatest importance during most of the 1950's but, because of the drier weather during the past three years, irrigation and community pasture development have taken precedence. The following is a summary of Branch activities to Mar. 31, 1960.

Water Rights.—In addition to administering the provisions of the Water Rights Act, further responsibilities were added to Branch responsibilities by the Ground Water Conservation Act which came into force on July 1, 1959. This Act requires every water-well driller to hold a licence and to provide certain drilling reports and formation samples. Licences were granted to 86 drillers, who submitted drilling reports on 496 operations. At Mar. 31, 1960, 5,962 Water Right licences were in good standing, involving storage of 455,598 acre-feet of water.

---

* Prepared in the Editorial and Information Division, Department of Northern Affairs and National Resources, Ottawa.

† Revised by the Deputy Minister, Saskatchewan Department of Agriculture.

Irrigation Development.—Up to the end of March 1960, 54 irrigation projects had been initiated on which topographic surveys had been conducted on 163,128 acres. In addition, 326 miles of ditch had been constructed and 1,586 water-control structures built. Forty-five Water Users' Districts were organized, comprising some 202,669 acres.

Drainage and Flood Control.—Some work was done on 453 drainage and flood control projects. Topographic surveys were carried out on 191,865 acres, some 659 miles of ditch dug and 921 control structures built.

Land Development and Pasture Construction.—A total of 152 land development and community pasture projects had been worked on up to the end of the 1959-60 fiscal year. Some 68,717 acres of forage had been seeded and 1,113 miles of fence constructed. Approximately 750,000 trees had been planted in the afforestation program.

Community Pastures.—Through the Lands Branch of the provincial Department of Agriculture, the province has transferred title to 1,195,978 acres and leased without charge another 356,374 acres of land to PFRA for community pastures. Outside the PFRA program, the province has another 880,819 acres in 136 community pastures operated by co-operative associations, by municipalities or by the provincial Department of Agriculture; in 1960, 26 pastures operated by the province provided grazing for 25,000 head of cattle owned by 1,621 local farmers.

Development of Land for Cultivation.—Crown lands, either under cultivation or suitable for cultivation, are leased for 33-year periods. The province may reimburse farmers in cash for the cost of clearing and breaking virgin land or the farmers may retain crop shares equivalent in value to costs sustained. To Mar. 31, 1960, the investment of the province for land clearing and breaking amounted to $7,960,961, and included work done in six settlement projects involving initial clearing and breaking on about 200 farm units before the land was leased.

Alberta.*—The Alberta Water Resources Act gives the Minister of the Department of Agriculture wide powers to investigate the water resources of the province and extensive surveys have been carried out to determine the distribution and extent of the available water supply in the province and the most beneficial use for irrigation, water power and other purposes. The Water Resources Branch of the provincial Department of Agriculture administers the licensing of water power projects and the construction work in several irrigation projects. Irrigation projects are also licensed and water allocated for domestic and irrigation purposes. Other work includes administration of drainage districts, co-operation on the Peace River dug-out project and on river protection projects where flooding occurs. In more recent years much of this work has been carried out by the Federal Government in co-operation with the Government of Alberta.

Stream measurement is being done by the Hydrometric Service of the federal Department of Northern Affairs and National Resources, and irrigation surveys are carried out largely by the water development organization under PFRA (see p. 421).

The figures given in Table 4 of land actually irrigated in Alberta in 1959 are only approximate because, while there are increases resulting from the creation of new pump irrigated areas, there are also decreases caused by soil reclassification and less water use, depending on natural precipitation. Seepage and alkali problems also have an effect on acreage quoted as irrigable. Figures for small private irrigation projects have been omitted because of their uncertain water supply.

Gross cash returns from the irrigable area are estimated at $30,000,000 though this figure does not take into account the value of stockwater supplied through irrigation works. Nor does it include many other credit items that are difficult to evaluate such as the recreational use of water which, to these one-time semi-arid areas, is particularly important, and the value of fish taken from irrigation reservoirs which is known to be quite significant. Several communities receive their entire domestic water supply via irrigation canals.

---

*Revised in the Deputy Minister's office, Alberta Department of Agriculture.

4.—Major Irrigation Districts in Alberta, 1959

District	Classified Irrigable Area	Area Actually Irrigated in 1959
	acres	acres
St. Mary and Milk Rivers Development	259,861	192,864
Magrath Irrigation District	7,885	7,000
Raymond Irrigation District	19,058	15,800
Taber Irrigation District	32,100	25,426
Western Irrigation District	50,000	9,930
Eastern Irrigation District	250,000	188,721
Bow River Development—		
Federal	94,783	52,250
Provincial	35,217	2,264
Mountain View Irrigation District	3,600	2,789
Leavitt Irrigation District	4,631	1,542
Aetna Irrigation District	8,303	360
United Irrigation District	34,005	17,761
Lethbridge Northern Irrigation District	96,135	46,459
Ross Creek Irrigation District	2,069	1,400
Macleod Irrigation District	3,000	—
Totals	**900,647**	**564,566**

British Columbia.*—About 20 p.c. of the arable land in British Columbia is under cultivation and nearly all the grazing area is being utilized. The 1,200,000 acres of improved land gives a ratio of about three-quarters of an acre per person. Within this arable area there exist an estimated 217,000 acres of irrigated land, and the additional acreage of irrigable land in British Columbia is estimated at 400,000 acres. About three-quarters of the irrigated area is made up of individual projects and the other quarter is served by the larger irrigation projects listed in Table 5.

Section 4.—Statistics of Agriculture*

The collection, compilation and publication of statistics relating to agriculture is a responsibility of the Dominion Bureau of Statistics. Valuable information obtained through the Censuses of Canada and partial-coverage surveys may be obtained in reports issued by the Bureau.†

The Bureau also collects and publishes primary and secondary statistics of agriculture on an annual and monthly basis. The primary statistics relate mainly to the reporting of crop conditions, crop and livestock estimates, wages of farm labour and prices received by farmers for their products. The secondary statistics relate to farm income and expenditure, per capita food consumption, marketing of grain and livestock, dairying, milling and sugar industries and cold storage holdings. In the collection of annual and monthly statistics, the federal Department of Agriculture and the provincial Departments of Agriculture, as well as such agencies as the Board of Grain Commissioners and the Canadian Wheat Board, co-operate with the Bureau. Also, many thousands of farmers throughout Canada send in reports voluntarily. The figures contained in this Section do not include estimates for Newfoundland. Agriculture plays a relatively minor part in Newfoundland's economy, commercial production of most agricultural products being quite small.

A review of agricultural production and trade covering 1960 is given in Subsection 1; details for the year 1959 are presented in Subsections 2 to 4 and 7 to 9. At the time of going to press, 1960 details were available only for livestock and poultry and dairying, given is Subsections 5 and 6.

Subsection 1.—Review of Agricultural Production and Trade, 1960

The upward trend experienced by the Canadian economy, which began in mid-1958 following a mild recession, was again interrupted in 1960. Gross national product in that year was only about 3 p.c. above the level of the previous year, whereas the 1959 estimate was nearly 7 p.c. above that of 1958. It is estimated that the physical volume of output in 1960 was about 2 p.c. above that of 1959, with final product prices higher by approximately 1.5 p.c. The physical volume of agricultural output was higher in 1960 than in the previous year, largely as a result of increased production of grain, potatoes, tobacco and maple products.

Preliminary estimates place farm net income for 1960 at $1,352,199,000, about 12 p.c. above the revised estimate of $1,206,325,000 for 1959. Although cash income from the sale of farm products was down slightly and operating expenses continued to rise, these two items were more than offset by an increase in farm-held inventories of grains and livestock, and larger supplementary payments.

Field Crops.—Canada's 1960 wheat crop amounted to 489,600,000 bu., compared with the 1959 crop of 413,500,000 bu. and the 1958 crop of 371,700,000 bu. Total supplies of wheat in the 1960-61 crop year (carryover at July 31 plus the 1960 crop) amounted to 1,027,200,000 bu. compared with 962,500,000 bu. in the previous year. The 1960 oat crop of 456,100,000 bu. was 38,200,000 bu. larger than in 1959, while production of barley at 207,000,000 bu. was below the 1959 level of 225,600,000 bu. Total supplies of oats and barley for the 1960-61 crop year amounted to 549,000,000 bu. and 328,500,000 bu., respectively. The combined fall and spring rye crop was estimated at 10,100,000 bu., giving total supplies for the 1960-61 crop year of 16,900,000 bu.

Reduced carryover stocks of oats, barley and rye and a smaller barley, corn and mixed grain crop in 1960 brought total supplies of Canadian feed grains in the crop year 1960-61 down about 2 p.c. below those of 1959-60, despite higher levels of production for oats, rye and buckwheat. Crop-year supplies of oats (the Aug. 1 carryover of 92,800,000 bu. and the 1960 production of 456,100,000 bu.) amounted to 549,000,000 bu., an increase of 2 p.c.

---

*Revised in the Agriculture Division, Dominion Bureau of Statistics.
†Copies obtainable from the Dominion Statistician or the Queen's Printer, Ottawa.

over the 1959-60 total of 536,900,000 bu. Supplies of barley at 328,500,000 bu. were 7 p.c. less than the 1959 total of 353,700,000 bu. and consisted of a carryover of 121,500,000 bu. and a crop of 207,000,000 bu.

Net supplies of feed grains available in 1960-61 at 17,000,000 tons were about 1 p.c. less than the 1959-60 total of 17,100,000 tons. Relative to livestock, the net supply of feed grain per grain-consuming animal unit was placed at 1.04 tons, 7 p.c. above the 1959-60 level of 0.97 tons and about 3 p.c. higher than the ten-year average of 1.01 tons. The increase over the previous year reflected a 7-p.c. decrease in grain-consuming animal units, which more than offset the effect of smaller net supplies. The livestock population in Canada, estimated as at June 1, 1960, was the equivalent of 16,300,000 grain-consuming animal units compared with the June 1, 1959 level of 17,600,000.

Production of sugar beets in 1960 was estimated at 1,093,000 tons compared with the 1958 record outturn of 1,325,000 tons. Average yield per acre was 12.72 tons in 1960, considerably less than the 1959 record yield of 13.70 tons. Alberta accounted for 51 p.c. of the total production and Manitoba was the next largest producer.

The dried pea crop of 993,000 bu. in 1960 reflected the effect of reductions in seeded acreage which was only partly offset by an increase in average yield. Imports amounted to 96,000 bu. and exports to 240,000 bu. in the 1959-60 crop year. Production of dried beans was 1,012,000 bu., Ontario being the chief grower. Exports in the 1959-60 crop year were 189,700 bu., about three times greater than in 1958-59, and imports, at 104,200 bu., were 25 p.c. lower than in the previous year.

The soybean crop of 5,675,000 bu. in 1960 was smaller than the 1959 crop of 6,828,000 bu. In the 1959-60 crop year, 184,000,000 lb. of oil and 801,000,000 lb. of oil meal were produced in Canada. Imports of soybeans, mostly from the United States, amounted to 14,000,000 bu. and exports, mostly to the United Kingdom, were 3,000,000 bu.

The flaxseed crop at 25,114,000 bu. was about 42 p.c. above 1959 production. Acreage sown was up by 31 p.c. and the average yield increased from 8.2 bu. to 8.9 bu. per acre. Total supplies in the 1960-61 crop year were estimated at 30,000,000 bu. Crushings in 1959-60 of 146,000,000 lb. of flaxseed yielded 51,000,000 lb. of linseed oil and 90,000,000 lb. of oil meal. Exports at 12,500,000 bu. were lower than in the previous year.

Livestock.—The sharp reduction of 21 p.c. in hog gradings and increases of 11.3 p.c. and 5.3 p.c., respectively, in the inspected slaughter of cattle and calves, as well as reduced exports of live beef animals to the United States, were the outstanding features of the livestock situation in 1960.

The number of hogs on farms, estimated at 5,480,000 head on June 1, 1960, was 20 p.c. lower than the corresponding estimate for 1959. However, by Dec. 1, 1960 the number had increased to 5,526,000 head and the difference from the year-earlier estimate was reduced to 14 p.c., indicating that an up-turn in the cycle of production was starting. The build-up of cattle numbers continued in 1960 and Dec. 1 estimates indicated an increase of 4 p.c. during the year, most of which was in cows kept for beef purposes and in carry-over of calves and steers being fed in Canada.

Price movements are indicated by the following annual average calculations of prices on the Toronto market, with 1959 prices in parentheses: good steers, $22.65 ($25.10); good feeders steers, $22.90 ($25.10); good lambs, $21.85 ($21.15); and Grade A hogs, dressed, $24.75 ($24.80).

Dairying.—Milk production in 1960 reached a new record at 18,433,000,000 lb., about 1.4 p.c. higher than the 1959 output. Increases in Quebec, Ontario, Alberta and British Columbia more than offset, to that extent, decreases in the other provinces. Most of the increase in 1960 over 1959 was utilized in the manufacture of concentrated whole milk products. The output of creamery butter was lower by 1.8 p.c. at 319,900,000 lb., but factory cheese rose about 1.8 p.c. to 121,300,000 lb.

Annual per capita consumption of creamery butter continued to decline, dropping 1.23 lb. to 16.15 lb. in 1960. As a result, despite lower production and larger than normal exports amounting to 3,014,000 lb. in 1960, creamery butter stocks on hand at the end of the year amounted to 113,802,000 lb., the largest carryover on record.

The output of concentrated whole milk production, normally only slightly in excess of domestic requirements, was 11 p.c. above those requirements in 1960, with government policy encouraging diversion of milk from butter into whole milk powder. Exports and per capita consumption increased 49.3 and 3.6 p.c., respectively, over 1959. Skim milk powder production at 166,800,000 lb. was 9,618,000 lb. below production in 1959 and 18,800,000 lb. below the peak reached in 1958. Exports declined from 110,500,000 lb. in 1959 to about 48,000,000 lb. in 1960 and domestic disappearance at 116,700,000 lb. was 3.8 p.c. below the record high Canadian utilization of 1959.

Fruits and Vegetables.—The apple crop, which is the most important of the fruit crops, was estimated at 13,100,000 bu. in 1960, 16 p.c. below the 1959 output. Production of plums and prunes, peaches, cherries, raspberries and loganberries was also lower. Crops were smaller in all producing provinces, with the exception of British Columbia. Minimum prices for all fruits for processing were higher than in 1959, except for a certain size of Kieffer pears.

Commercial vegetable growers planted 215,000 acres in 1960 as compared with 205,000 acres in 1959.

Other Principal Farm Products.—The 1959 *tobacco* crop was estimated at 170,255,000 lb., green weight, compared with 197,302,000 lb. in 1958. Ontario flue-cured tobacco was calculated at 147,000,000 lb. as against 176,322,000 lb. in 1958. About 129,000 acres were planted to tobacco, 119,000 acres in southern Ontario which was 6,000 acres less than in the previous year. In 1959 the Ontario Flue-cured Tobacco Growers' Marketing Board reduced the basic acreage allotment per farm by 15 p.c. after allowing a basic exemption per farm of 15 p.c. and alloting acreage to more than one hundred new farms. It is interesting to note that research has made possible the raising of tobacco in the Ottawa Valley of Ontario and in the Annapolis Valley of Nova Scotia; so far production in these areas is on a small scale.

The per capita cigarette consumption in Canada, calculated on the basis of total population, has increased considerably during the past few years, amounting to 1,678 in 1956, 1,817 in 1957, 1,901 in 1958, and 1,939 in 1959.

The *potato* crop, estimated at about 43,790,000 cwt. for 1960, recorded an increase of 20 p.c. over the 1959 crop of 36,532,000 cwt.

Fewer *eggs* were marketed through registered stations in 1960 than in 1959. Although the weighted egg price to producers for the first six months of 1960 declined to 24.9 cents from 29.4 cents for the same period in 1959, the price for the whole year at 29.8 was 0.6 cents higher than a year earlier. Egg price support to producers by means of deficiency payments under the Agricultural Stabilization Act began with the marketing year commencing Oct. 1, 1959 and will continue to Sept. 30, 1961 at an average of 33 cents per doz. for Canada Grade A Large and Extra Large.

Wool prices rose slightly from 1959 to 1960, and payment under the Agricultural Stabilization Act was increased from 21 to 23 cents per lb. Total farm value of shorn wool production increased from $3,016,000 to $3,168,000. Production was estimated at 6,891,000 lb. as compared with 6,800,000 lb. in 1959.

The 1960 *maple crop*, expressed as syrup, was estimated at 2,719,000 gal., about 15 p.c. above that of 1959 and 10 p.c. above the average production for the years 1953-57. The bulk of the crop was produced in the Province of Quebec. Exports of sugar in 1960 stood at 5,900,000 lb., about 20 p.c. lower than in the previous year. The value of the 1959 maple crop was estimated at $9,468,000, 12 p.c. more than in 1958.

The 1960 *honey crop* was estimated at 32,167,000 lb., 2 p.c. above that of 1959. The slight increase in production was accounted for by much higher average yields in the Prairie Provinces and in British Columbia. There was a reduction in the number of active beekeepers from 14,180 in 1959 to 12,420 in 1960 and colony numbers declined by 5,000 to a total of 325,540 in 1960. The production increase was thus attributable to a higher average yield—99 lb. per colony in 1960 compared to 95 lb. for 1959. The average for the years 1949-58 was 78 lb. per colony.

Subsection 2.—Cash Income from the Sale of Farm Products, 1959*

During 1959, Canadian farmers received an estimated $2,786,000,000 from the sale of farm products, participation payments on previous years' grain crops, net cash advances on farm-stored grains, and deficiency payments made under the present farm prices support program. This estimate is only slightly below the 1958 level of $2,813,000,000 and compares with the record high estimate of $2,859,000,000 realized in 1952. Income from the sale of livestock and animal products during 1959 was slightly lower than a year earlier, whereas returns from the sale of field crops were slightly higher. In addition to the above cash receipts, farmers in Western Canada received, in 1959, supplementary payments totalling $22,100,000, most of which represented payments made under the provisions of the Prairie Farm Assistance Act. This was in contrast to the 1958 supplementary payments of over $60,000,000 which, in addition to Prairie Farm Assistance payments, included most of the $40,000,000 distributed under the Western Grain Producers Acreage Payment Regulations. Provincially, the greatest absolute declines in farm cash income in 1959 took place in Alberta and Saskatchewan, followed by Ontario, Quebec and New Brunswick. Little change occurred in cash returns in British Columbia, while some increase was recorded for Manitoba, Prince Edward Island and Nova Scotia.

Field Crops.—Total returns from field crops, which include fruits and vegetables as well as Canadian Wheat Board participation payments and net cash advances on farm-stored grains, amounted to $997,000,000, little different from the $996,600,000 realized from this source one year earlier. While returns from particular commodities within this group differed between 1958 and 1959, they tended to be offsetting. Income from wheat at $422,300,000 was down by $13,000,000 and from oats at $22,100,000 was $7,000,000 below the 1958 level; marketings of both wheat and oats were smaller.

A lower output of fruits in 1959 was reflected in a total cash income from this source of $35,800,000, as against $43,800,000 in the previous year. On the other hand, larger returns were realized from Canadian Wheat Board participation payments, net cash advances on farm-stored grains and sales of such commodities as flaxseed, barley, potatoes and tobacco. In the case of flaxseed, substantially higher marketings were combined with higher prices. Increased prices of potatoes more than offset a decline in marketings.

Livestock and Animal Products.—Farmers received about $1,750,000,000 from the sale of livestock and animal products in 1959, only slightly less than in 1958. Income from cattle and calves, estimated at $574,890,000, was about 6 p.c. below that of 1958 as a result of smaller marketings. Prices for both cattle and calves at the farm level were, on the average, higher in 1959 than in 1958; it was not until the last quarter of the year that cattle prices in general declined to levels slightly below those for the corresponding quarter in 1958. The drop in marketings can be attributed in large measure to a softening of the United States market for live cattle and to a continued build-up of beef cow numbers on Canadian farms. The effects of the decline on income from the sale of cattle and calves were offset in part by higher returns from hogs. A very substantial increase in marketings more than counterbalanced a fairly significant decline in average price and returns rose from $325,094,000 in 1958 to $343,884,000 in 1959.

---

* Excludes Newfoundland.

Income from dairy products during 1959 totalled nearly $515,000,000, about $19,000,000 more than in the previous year, as a result of both higher prices and increased production. Producers' returns from the sale of eggs were estimated at $139,634,000, 6 p.c. below the amount realized in 1958; somewhat higher production was offset by lower prices.

Net Income of Farm Operators from Farming Operations.—Two concepts are used in preparing estimates of farm net income from farming operations. One is called *Realized Net Income* and is obtained by adding together cash income from the sale of farm products, supplementary payments and the value of income in kind and deducting farm operating expenses and depreciation charges. The other is referred to as *Total Farm Net Income* and is obtained by adjusting realized net income to take into account changes occurring in inventories of livestock and stocks of grains on farms between the beginning and end of the year.

Realized Farm Net Income.—For the year 1959, it is estimated that the realized net income of Canadian farmers from farming operations amounted to $1,260,300,000. These returns are below the estimate of $1,417,700,000 for 1958 but are higher than the $1,197,000,000 estimated for 1957 and the average level of $1,210,800,000 established for the five-year period 1954-58. Increased operating expenses and depreciation charges, together with smaller supplementary payments and a decline in farm cash income, accounted for most of the reduction in realized net income between 1958 and 1959. The gain in 1959 over the five-year average for 1954-58 can be attributed to the fact that increases in farm cash income, income in kind, and supplementary payments more than offset higher farm operating expenses and depreciation charges.

Total Farm Net Income.—Taking into account changes in farm-held inventories of grains and livestock, total farm net income for 1959 is estimated at $1,191,900,000. These net returns are below the estimate of $1,353,100,000 for 1958, but are above the 1957 level of $1,058,300,000. The five-year (1954-58) average was $1,236,900,000.

Subsection 3.—Volume of Agricultural Production*

Canada's index of physical volume of agricultural production is estimated at 143.6 (1935-39 = 100) for the year 1959, slightly below the level of 145.1 for 1958. The 1959 estimate is almost identical with the five-year average (1954-58) of 143.7, but is well below the record high of 169.5 established in 1956. Although some production increases were recorded for such important items as grains, livestock and dairy products in 1959 over 1958, they were not large enough to completely offset the declines estimated for most of the other agricultural products.

---

* Excludes Newfoundland.

A reduction in agricultural production was recorded for each of the provinces except Nova Scotia, Saskatchewan and Alberta. These declines in output ranged from less than 1 p.c. for Quebec to slightly more than 12 p.c. for Prince Edward Island. For those provinces in which farm production increased in 1959 over 1958, the gains in output ranged from 5 p.c. for Alberta to 7 p.c. for Nova Scotia and slightly more than 8 p.c. for Saskatchewan.

10.—Index Numbers of Physical Volume of Agricultural Production, by Province, 1950-59

(1935-39=100. Exclusive of Newfoundland)

NOTE.—For a description of this index, methods and coverage, see DBS *Quarterly Bulletin of Agricultural Statistics* (Catalogue No. 21-003) for April-June, 1952. Figures for 1935-44 are given in the 1950 Year Book, p. 420, and for 1945-49 in the 1956 edition, p. 423.

Year	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Total
1950	148.2	105.2	140.2	136.3	128.1	137.8	168.3	121.8	134.2	137.8

Subsection 4.—Field Crops

Crop conditions across Canada are never universally good or bad because of the wide diversity of situations. The 1959 crop year was no exception, although the problems farmers encountered with the weather were sufficient to classify the year generally as a difficult one. Over much of the Prairie Provinces drought was a problem for the third successive year, but timely rains in late June helped the crops to maturity and an early harvest was in prospect. However, unseasonable snowstorms and wet weather interrupted operations and, as a result, some 56,000,000 bu. of wheat, 26,000,000 bu. each of oats and barley and 2,600,000 bu. of flaxseed were left in the fields over the winter to be harvested in the spring. Without a period of exceptionally good weather in November and part of December, the amount of grain remaining in the fields would have been much greater. During the fall months large quantities of grain were harvested in a tough or damp condition. Hail losses were light but insect outbreaks required extensive control measures.

In the Maritime Provinces, growing conditions were generally satisfactory but wet fall weather delayed maturity and hampered harvesting operations. Grain crops in Quebec, after making good progress in July, experienced drought conditions during much of August, only to have harvesting operations hindered by wet weather. Hot, dry, summer weather in Ontario reduced yields of early crops to below levels of a year earlier, but late crops like corn and soybeans matured well and yields were good. In British Columbia, growing conditions were generally favourable and production of most crops was above the 1958 level.

Marketings of the five major grains (wheat, oats, barley, rye and flaxseed) in the Prairie Provinces totalled 551,977,000 bu. in 1958-59 and 516,695,000 bu. in the 1959-60 crop year. These amounts were well below the record 1952-53 crop year when marketings reached 844,855,000 bu. and 13 p.c. lower than the ten-year (1948-49 to 1957-58) average of 595,490,000 bu. Combined exports of the same grains (including wheat flour, rolled oats and oatmeal, malt, and pot and pearl barley) amounted to 390,000,000 bu. in 1958-59 and 364,136,000 bu. in 1959-60. Exports during the period showed a decrease from the ten-year average of 404,660,000 bu.

After registering a decrease in 1958-59, supplies of the five principal grains declined again in 1959-60, with reduced carryover more than offsetting a relatively small increase in total production. Reflecting the combined effect of smaller available supplies and expanded disappearance, total carryover stocks at July 31, 1960 were lower than the 1959 level.

The gross value of production of principal field crops on Canadian farms in 1958, based on average prices received by farmers throughout the 1958-59 crop year, was estimated at $1,520,371,000. This amount was well below the record-breaking year of 1952 when the total reached $2,345,030,000. An estimate of the value of the 1959 crops, based on average prices received by farmers during the complete crop year, will be published in one of the regularly scheduled DBS crop reports and in the *Quarterly Bulletin of Agricultural Statistics* (Catologue No. 21–003).

Stocks of Grain in Canada.—Table **14** shows the stocks of Canadian grain on hand in Canada and in the United States on July 31 for the years 1953-59, with averages for the five-year periods 1940-44 and 1945-49. Stocks in Canada are separated into those in commercial positions and those on farms. Stocks on farms and in country elevators in the Prairie Provinces are given separately.

14.—Carryover of Canadian Grain as at July 31, 1953-59, with Averages for 1940-44 and 1945-49

NOTE.—Figures for individual years before 1953 will be found in the corresponding table of previous editions of the Year Book.

As at July 31—	Total in Canada and United States	Total in Canada	In Commercial Storage in Canada	On Farms in Canada	Prairie Provinces	
					On Farms	In Country Elevators

The federal Department of Agriculture inspects all livestock in plants designated as inspected establishments under the Meat and Canned Foods Act. A record is kept of these inspections and figures from 1946 are given in Table 17. Local wholesale butcherings and slaughterings carried out by retail butchers and by farmers for their own use are not included. Actually, the slaughtering and meat packing industry is concentrated in a comparatively small number of large establishments to facilitate greater efficiency and utilization of products; thus the figures of Table 17 are fairly inclusive. The slaughtering and meat packing industry is dealt with in its proper relation to all other manufacturing enterprises in Chapter XIV of this volume. On a gross value basis it normally ranks among the three largest manufacturing industries in Canada but it owes its importance to the value of raw products obtained from the farmer and the rancher rather than to the value added by the manufacturing process.

Subsection 6.—Dairying

Milk Production.—Milk production in 1960 amounted to 18,433,320,000 lb., an increase of 246,583,000 lb. over production in the previous year. The proportion of the total milk production used for factory-made dairy products was 58.0 p.c., the same as in 1959, and the proportion sold in fluid form 31.1 p.c. compared with 30.9 p.c. Milk used for all purposes on farms (home consumed, manufactured and fed) was 10.9 p.c. in 1960 compared with 11.1 p.c. in 1959.

Butter, Cheese and Other Dairy Products.—Butter production in 1960 amounted to 332,360,000 lb., 6,472,000 lb. fewer than in 1959. The total included 319,877,000 lb. of creamery butter, 9,518,000 lb. of dairy or farm-made butter and 2,965,000 lb. of whey butter.

The 1960 factory cheese production was estimated at 121,291,000 lb., an increase of 1.8 p.c. over the 1959 estimate but 41.5 p.c. below the peak production of 207,431,000 lb. in 1942. Exports of cheese, mostly cheddar, amounted to 18,780,000 lb. in 1960 and 20,009,000 lb. in 1959 as compared with 135,409,000 lb. in 1945.

The over-all production of concentrated milk products in 1960 amounted to 613,467,000 lb., 30,223,000 lb. more than in 1959, while the production of ice cream mix continued its upward trend, reaching over 20,400,000 gal.

[1] In previous years, ice cream mix data were doubled and published as ice cream.

Domestic Disappearance of Dairy Products.—The estimated consumption of fluid milk and cream, on a milk basis, amounted to 5,271,588,000 pt. in 1960, which amount was 88,586,000 pt. higher than the 1959 consumption. The daily average consumption per capita was 0.83 pt. compared to 0.84 pt. in 1959. The estimated consumption of milk and cream is given by province in Table **25** and the domestic disappearance of all dairy products in Table **26**.

[1] Includes Newfoundland for all manufactured dairy products. [2] Includes, in addition to the items listed, malted milk, cream powder, partly skimmed evaporated milk, whole milk powder of less than 26 p.c. fat, formula milks, evaporated milk of 2 p.c. fat, multi-milk and sterilized cream. [3] Includes milk by-products items not listed, i.e., condensed buttermilk, powdered buttermilk, sugar of milk, casein, powdered whey, special formula skim milk products and multi-skim milk. Since the quantities used for human consumption and livestock feeding cannot be separated, per capita figures include both. [4] Includes ice cream mix in terms of milk.

Subsection 7.—Fruits and Vegetables

Fruits.—Commercial fruit growing in Canada is confined almost exclusively to rather limited areas in the Provinces of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia. Nova Scotia production is centred mainly in the Annapolis Valley and New Brunswick production in the St. John River Valley and Westmorland County. The fruit growing districts of Quebec are the Montreal area, the North Shore area, the Eastern Townships and the Quebec City district. Ontario fruit is grown in all the counties adjacent to the St. Lawrence River and the Great Lakes as far west as Georgian Bay, the Niagara district being the most productive. In British Columbia the four well-defined fruit areas are the Okanagan Valley, the Fraser Valley, the Kootenay and Arrow Lakes district and Vancouver Island. The climate elsewhere in Canada is not generally suitable for commercial tree-fruit culture. In most producing areas, particularly in the Annapolis Valley of Nova Scotia, the Niagara Peninsula of Ontario and the Okanagan Valley of British Columbia, fruit growing is either the principal or one of the most important forms of agriculture and is of paramount importance to the economy of those areas. Apples and small fruits are produced commercially in the provinces named but tender tree fruits and commercial vineyards are limited largely to Ontario and British Columbia.

Strawberries are grown commercially in all provinces for which tree-fruit statistics are prepared, as well as in Prince Edward Island. However, this crop is produced over a somewhat wider area than are tree fruits. In Nova Scotia, for example, considerable quantities of strawberries are grown in Colchester County and farther north, as well as in the apple producing areas of the Annapolis Valley. In British Columbia most of the strawberries are grown in the Fraser Valley rather than in the predominantly tree-fruit producing area of the Okanagan Valley.

Raspberries are grown commercially in Nova Scotia, New Brunswick and Quebec but the bulk of the crop is produced in Ontario and British Columbia. The Fraser Valley of British Columbia is the most important producing area.

Wild blueberries are harvested on a commercial scale in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick and Quebec. This crop is indigenous to certain lands in these areas. Individuals who harvest the wild berries may undertake to burn the land from time to time for weed control and to effect pruning, dusting is often carried out to control insects, and bees are sometimes introduced to achieve better pollination. A large percentage of the crop is frozen and exported. Some blueberries are picked for sale in other provinces but no statistics of this trade are available. There is also some production of cultivated blueberries, particularly in British Columbia.

A marketing system has been developed for distributing fresh fruit from the specialized production areas to all parts of the country and a large proportion of the deciduous fruit consumed in Canada is grown domestically. Considerable quantities of apples, strawberries and blueberries are exported annually.

Canning and processing industries have developed in the fruit growing districts and, although the importance of the processing market varies with different fruits, it provides a valuable outlet for substantial proportions of most Canadian-grown fruit crops.

27.—Estimated Commercial Production and Farm Value of Fruit, 1957-59

[1] Farm value (to pickers in the case of blueberries) for unpacked fruit.

Vegetables.—Estimates of acreage and production of commercial vegetables in Canada are prepared for all provinces except Newfoundland, Prince Edward Island and Saskatchewan. The Province of Ontario is the largest producer, followed by Quebec and British Columbia. A wide variety of crops is grown in these three provinces while a somewhat smaller range of crops is produced in the Maritimes and in the Prairie Provinces.

Canning, freezing and processing of vegetables are carried on in the important producing areas. The estimates in the following tables cover output of commercial growers only and do not include any acreages or production of vegetables grown for home use on farms or elsewhere.

29.—Estimated Commercial Acreage of Vegetables, by Province, 1957-59

Province	1957	1958ʳ	1959
	acres	acres	acres
Nova Scotia[1]	4,740	5,120	5,430
New Brunswick[1]	910	1,320	1,420
Quebec	53,710	61,120	66,410
Ontario	115,270	100,750	99,160
Manitoba[2]	1,990	3,610	3,870
Alberta[2]	12,000	13,790	13,840
British Columbia	17,250	14,260	15,300
Totals	**205,870**	**199,970**	**205,430**

[1] Acreages of peas in Prince Edward Island and New Brunswick are included with Nova Scotia. [2] Acreages of beans, corn and peas in Manitoba are included with Alberta.

[1] Estimates apply only to that portion of the crop grown for processing in Quebec, Ontario, Manitoba and Alberta in 1957; in Ontario in 1958 and 1959. [2] Estimates apply only to that portion of the crop grown for processing in Quebec, Manitoba and Alberta in 1957. [3] Estimates apply only to that portion of the crop grown for processing in all provinces for which estimates are made except British Columbia in 1957, 1958 and 1959.

Subsection 8.—Other Principal Farm Products

Tobacco.—The chief tobacco growing area of Canada is located in southern Ontario in the counties adjacent to Lake Erie. Most of the cigarette tobacco comes from this district. In Ontario in 1959, 111,224 acres of flue-cured or Bright Virginia type tobacco and 6,172 acres of Burley tobacco were harvested. These are the most important types grown in Canada though dark air-cured and fire-cured tobacco as well as cigar tobacco are grown on a limited scale. The only other important production comes from Quebec. In 1959, 5,492 acres of flue-cured tobacco, 4,000 acres of cigar tobacco and 763 acres of pipe tobacco were harvested in that province.

A study of Department of National Revenue reports on tax-paid withdrawals of tobacco products reveals changes in the smoking habits of Canadians during the past three decades. In 1922, the first year for which comparable figures are available, Canadian annual per capita consumption of cigarettes was 229, cigars 20, cut tobacco 1.3 lb., plug tobacco 1.1 lb. and snuff about 1.3 oz. By 1959 the annual per capita consumption of cigarettes had increased to 1,939, cigars had decreased slightly to 17.9, cut tobacco had gone up to 1.6 lb. in 1954 but had declined to 1.2 in 1959, and plug tobacco had also declined considerably.

31.—Acreage, Production and Value of the Commercial Crop of Leaf Tobacco, by Province, 1955-59, with Average for 1949-53

[1] Includes other types not specified.

Sugar Beets and Beetroot Sugar.—Sugar beets are grown commercially in Quebec, Ontario, Manitoba and Alberta and beet sugar factories are located in these provinces. In Quebec, commercial production is centred in the St. Hilaire area of the Eastern Townships; in Ontario, production is confined largely to the southwestern section of the province and factories are located at Wallaceburg and Chatham. Alberta produces the largest crop and in that province sugar beets are grown under irrigation.

33.—Acreage, Yield and Value of Sugar Beets and Quantity and Value of Refined Beetroot Sugar Produced 1955-59, with Average for 1949-53

Eggs.—The net production of eggs in 1960 was 451,050,000 doz., which was 8,954,000 doz. fewer than in the previous year. This decrease occurred because of a moderate drop in the number of layers and despite a higher rate of lay. Domestic dissappearance, not including hatching eggs, amounted to 426,800,000 doz. as compared with 418,925,000 doz. in 1959. Per capita consumption for the year 1960 was 24.0 doz.

34.—Production, Utilization and Value of Farm Eggs, by Province, 1959 and 1960

[1] Total laid less loss.

Wool.—Canada's wool requirements are met largely by imports which amounted to 51,492,000 lb. (greasy basis) in 1959 and 42,209,000 lb. in 1958. Exports amounted to 5,002,000 lb. in 1959 and 4,002,000 lb. in 1958. The apparent domestic consumption of wool shown in Table **35** is determined on the basis of production, exports and imports but does not take into consideration changes in stocks for which the data are not available. Differences in wool utilization from year to year are therefore probably less marked than indicated by these figures.

[1] Includes Agricultural Stabilization Act payments of 28 and 21 cents per lb. on graded wool in 1958 and 1959, respectively.

Honey.—Honey is produced commercially in all provinces of Canada except Newfoundland, Ontario being the largest producer. There is a considerable movement of honey from the Prairie Provinces to other parts of Canada. In recent years imports have been higher than exports.

Honey statistics have been compiled on an all-Canada basis since 1924 and show that the largest recorded crop was in 1948 when 45,145,000 lb. were produced. Production in 1959 was 31,527,000 lb.

In order to facilitate storage, shipment and uniformity of quality, considerable quantities of Canadian honey are pasteurized. Beekeepers' marketing co-operatives are active in several provinces. Bees are kept in some of the fruit growing districts mainly for purposes of pollination.

Maple Sugar and Maple Syrup.—Maple syrup is produced in the Provinces of Nova Scotia, New Brunswick, Quebec and Ontario. The bulk of the crop comes from the Eastern Townships of Quebec, a district famous both in Canada and in the United States as the centre of the maple products industry. Virtually all of the maple products exported are sent to the United States with the larger proportion moving as sugar, although substantial quantities of syrup are also shipped.

Much of the syrup sold in Canada is marketed in one-gallon cans direct to the consumer from the producer but a considerable amount of both sugar and syrup is sold each year to processing firms.

Nursery Stock.—Statistics concerning the nursery industry in Canada for the years 1958 and 1959 are presented in Tables **39** and **40**. All nurseries were asked to report quantities sold of stock propagated or imported during these periods. Stock purchased from other nurseries in Canada was excluded to prevent duplication. A total of 443 nurseries reported shipments in 1959 as compared with 279 the previous season. Provincial distribution was as follows: Ontario 228, British Columbia 97, Quebec 49, Manitoba 23, the Maritime Provinces 22, Alberta 14 and Saskatchewan 10.

Subsection 9.—Prices of Agricultural Products

The monthly index of farm prices of agricultural products was designed to measure changes occurring in the average prices farmers receive at the farm from the sale of farm products. In comparing current index numbers with those before August 1957, certain points should be considered. Western grain prices used in the construction of the index before Aug. 1, 1957 are final prices for all grains. Since that date only initial prices are available for western wheat, oats and barley. Subsequent participation payments made on the 1959 crops will be added to the prices currently used and the index revised upward accordingly.

41.—Average Index Numbers of Farm Prices of Agricultural Products, by Province, 1950-59, and Monthly Indexes for 1958 and 1959

(1935-39=100)

Note.—A description of this index, its coverage and the methods used will be found in DBS *Quarterly Bulletin of Agricultural Statistics* (Catalogue No. 21-003) for October-December 1946.

[1] All weights; beginning in 1958 prices for steers are not classified by weight. [2] No sales reported.

Subsection 10.—Food Consumption

Food consumption figures represent available supplies, including production and imports, adjusted for change of stocks, exports, marketing losses and industrial uses. All calculations are made at the retail stage of distribution, except for meats for which the figures are worked out at the wholesale stage. The amount of food actually eaten would be somewhat lower than indicated because of losses and waste occurring after the products reach the hands of the consumer. It should also be pointed out that there are minor inaccuracies in certain of the figures since statistics of storage stocks in the hands of retailers and consumers are not available.

All basic foods are classified under 13 main commodity groups. The total for each group is computed using a common denominator for the group, for example: milk solids (dry weight) in the dairy products group; fat content for fats and oils; and fresh equivalent for fruits. All foods are included in their basic form, that is, as flour, fat, sugar, etc., rather than in more highly manufactured forms.

The series in Table 44 represents the official estimates of yearly supplies of food moving into consumption, expressed in pounds per capita, for the years 1935-39 as an average for comparison with the years 1957, 1958 and 1959.

44.—Per Capita Supplies of Food Moving into Consumption 1957-59, with Average for 1935-39

NOTE.—Many of the figures for 1958 and some of those for previous years shown have been revised since the publication of the 1960 Year Book.

---

[1] Fluctuations in apparent per capita flour consumption are caused partly by lack of complete data on flour inventories in all positions. [2] Includes soybean flour. [3] Tomatoes canned, tomato juice, tomato pulp, paste and purée. [4] Exclusive of Newfoundland. [5] Breakdown according to current classification not available. [6] Includes process cheese. [7] Includes cream expressed as milk.

Disappearance of Meats and Lard.—Production of meats from slaughter in Canada, total supply, distribution and per capita disappearance of meats and lard are shown in Table **45**. All estimates are on a carcass-weight basis except canned meats, which are in terms of product.

[1] Excluding canned meats. [2] Included with beef. [3] Includes commercial lard production and estimated lard equivalent of renderable pork fat available from all uninspected slaughter.

Section 5.—Agricultural Statistics of the Census

Brief statistical information on the tenure and condition of occupied farm land as reported at the 1951 and 1956 Censuses is given in the 1957-58 Year Book at pp. 455-456, and statistics for the same Censuses relating to farms, farm mechanization, electrification and area are included in the 1960 Year Book at pp. 499-501. More detailed information may be obtained from the *Census of Canada 1956*, Vol. II.

1961 Census of Agriculture.—Canada's tenth Decennial Census, which includes a Census of Agriculture, was taken on June 1, 1961. A series of bulletins giving results from the Census will be issued as the tabulated data become available, and it is expected that a good deal of agricultural information will be released before mid-1962. Provincial reports containing all published data from the Census of Agriculture should be published by early 1963. Summary statistics will be included in the 1962 Canada Year Book.

Agricultural information collected in the Census includes data relating to land use, crop acreages, livestock numbers, and farm machinery, labour and capital. Forest products cut, sold or used on farms were enumerated on a *Woodland* questionnaire and in the Provinces of Ontario, Saskatchewan, Alberta and British Columbia an *Irrigation* questionnaire secured additional information for irrigated farms.

Separate tables will be published of data for commercial farms and for farms typed according to the principal products sold. Other detailed tabulations of data will be made for farms by size, tenure, economic class, and total capital.

Section 6.—International Crop Statistics

Tables **46** and **47** are based on estimates published on Dec. 29, 1960 and Jan. 26, 1961 by the Foreign Agricultural Service, United States Department of Agriculture, and give the acreages and production of wheat and the production of oats and barley for the harvests of 1958 and 1959, with averages for the years 1950-54, in the leading countries of the world.

46.—Estimated Acreages and Production of Wheat Harvested in 1958 and 1959 in Specified Countries, with Average for 1950-54

NOTE.—Many of the averages and the figures for 1958 have been revised since the publication of the 1960 Year Book.

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Canada's extensive forests have been an invaluable asset to the country and its people since the earliest days of settlement. The productive portion of these forests has poured increasing wealth into the stream of national income, contributing to the economy of the country as the producer of raw materials for industry and as the source of livelihood for hundreds of thousands of persons. At the same time, the existence of widespread forest cover, productive or unproductive in the sense of human utilization, remains essential to the maintenance of the balance of nature—in protecting water-catchment areas and assuring supplies of water, in lowering the temperature, reducing the velocity of the wind and protecting the land against drought and erosion, and in providing shelter for birds and animals.

Section 1.—Forest Regions[†]

The forests of Canada cover a vast area in the north temperate climatic zone. Wide variations in physiographic, soil and climatic conditions cause marked differences in the character of the forests in different parts of the country; hence, eight fairly well defined forest regions may be recognized. These regions, with the relative proportion of the total area of all forest regions occupied by each, are as follows:—

Region	*Percentage of Forested Area*	*Region*	*Percentage of Forested Area*
Boreal..........................	82.1	Acadian.........................	2.0
Great Lakes-St. Lawrence......	6.5	Columbia........................	0.8
Subalpine........................	3.7	Deciduous......................	0.4
Montane.........................	2.3		
Coast............................	2.2	TOTAL..................	100.0

---

[*] Sections of this Chapter that deal with forestry and the federal forestry program were revised in the Department of Forestry, Ottawa. Provincial forestry programs were prepared by the forestry officials of the respective provincial governments. Sections dealing with forest and allied industries, except as otherwise noted, were revised in the Forestry Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

[†] A more detailed discussion of forest regions is given in Bulletin 123, *Forest Regions of Canada*, published by the Department of Forestry (a revision of Bulletin 89, *A Forest Classification for Canada*). Accounts of variations in Canadian physiography and climate are included in a special article on The Climate of Canada, appearing at pp. 23-51 of the 1959 Canada Year Book.

Boreal Forest Region.—This Region comprises the greater part of the forested area of Canada, forming a continuous belt from Newfoundland and the Labrador Coast westward to the Rocky Mountains and northwestward to Alaska. The white and the black spruces are characteristic species; other prominent conifers are tamarack which ranges throughout, balsam fir and jack pine in the eastern and central portions, and alpine fir and lodgepole pine in the western and northwestern parts. Although the forests are primarily coniferous, there is a general admixture of broadleaved trees such as the white birches and poplars; these play an important part in the central and south-central portions, particularly in the zone of transition to the prairie. In turn, the proportion of spruce and tamarack rises northward, and with increasingly rigorous climatic conditions the close forest gives way to the open lichen-woodland which finally merges into tundra. In the east there is, along the southern border of the Region, a considerable intermixture of species from the Great Lakes–St. Lawrence Forest such as the white and the red pines, yellow birch, sugar maple, black ash, and eastern white cedar.

Subalpine Forest Region.—This is a coniferous forest found on the mountain uplands in Western Canada. It extends northward to the major divide separating the drainage of the Skeena, Nass and Peace Rivers on the south and to that of the Stikine and Liard Rivers on the north. The characteristic species are Engelmann spruce, alpine fir and lodgepole pine. There is a close relationship with the Boreal Region from which the black and the white spruces and aspen intrude. There is also some entry of blue Douglas fir from the Montane Forest, and of western hemlock, western red cedar, and amabilis fir from the Coast Forest. Other species found are western larch, whitebark pine and limber pine, and on the coastal mountains yellow cedar and mountain hemlock.

Montane Forest Region.—This Region occupies a large part of the interior uplands of British Columbia, as well as a part of the Kootenay Valley and a small area on the east side of the Rocky Mountains. It is a northern extension of the typical forest of much of the western mountain system in the United States, and comes in contact with the Coast, Columbia and Subalpine Forests. Ponderosa pine is a characteristic species of the southern portions. Blue Douglas fir is found throughout, but more particularly in the central and southern parts; lodgepole pine and aspen are generally present, the latter being particularly well represented in the north-central portions. Engelmann spruce and alpine fir from the Subalpine Region become important constituents in the northern parts, together with white birch. The white spruce, though primarily Boreal in affinity, is also present here. Extensive prairie communities of bunch-grasses and forbs are found in many of the river valleys.

Coast Forest Region.—This is part of the Pacific Coast Forest of North America. Essentially coniferous, it consists principally of western red cedar and western hemlock, with abundant Sitka spruce in the north, and with the addition of Douglas fir in the south. Amabilis fir and yellow cedar occur widely and, together with mountain hemlock and alpine fir, are common toward the timberline. Western white pine is found in the southern parts and western yew is scattered throughout. Broadleaved trees, such as black cottonwood, red alder and broadleaf maple, have limited distribution in this Region. Arbutus and Garry oak occur in Canada only on the southeast coast of Vancouver Island and the adjacent islands and mainland. These are species whose centres of population lie to the south in the United States.

Columbia Forest Region.—A large part of the Kootenay River Valley, the upper valleys of the Thompson and Fraser Rivers, and the Quesnel Lake area of British Columbia contain a coniferous forest closely resembling that of the Coast Region. Western red cedar and western hemlock are the characteristic species in this interior "wet belt". Associated trees are the blue Douglas fir, which is of general distribution, and, in the southern parts, western white pine, western larch, grand fir and western yew. Engelmann spruce from the Subalpine Region is important in the upper Fraser Valley and is found to some extent at the upper levels of the forest in the remainder of the Region. At lower elevations in the west and in parts of the Kootenay Valley the forest grades into the Montane Region and, in a few places, into prairie grasslands.

Deciduous Forest Region.—A small portion of the deciduous forest, widespread in the eastern United States, occurs in southwestern Ontario between Lakes Huron, Erie and Ontario. Here, with the broadleaved trees common to the Great Lakes–St. Lawrence Region, such as sugar maple, beech, white elm, basswood, red ash, white oak and butternut, are scattered a number of other broadleaved species which have their northern limits in this locality. Among these are the tulip-tree, cucumber-tree, papaw, red mulberry, Kentucky coffee-tree, redbud, black gum, blue ash, sassafras, mockernut and pignut hickories, and scarlet, black and pin oaks. In addition, black walnut, sycamore and swamp white oak are confined largely to this Region. Conifers are few, and there is only a scattered distribution of white pine, tamarack, red juniper and hemlock.

Great Lakes–St. Lawrence Forest Region.—Along the Great Lakes and the St. Lawrence River Valley lies a forest of a very mixed nature, characterized by the white and the red pines, eastern hemlock and yellow birch. With these are associated certain dominant broadleaved species common to the Deciduous Forest Region, such as sugar maple, red maple, red oak, basswood and white elm. Other species with wide range are the eastern white cedar and large-tooth aspen and, to a lesser extent, beech, white oak, butternut and white ash. Boreal species, such as the white and the black spruces, balsam fir, jack pine, poplars and white birch, are intermixed and in certain central portions, as well as in the east, red spruce becomes abundant.

Acadian Forest Region.—Over the greater part of the Maritime Provinces, exclusive of Newfoundland, there is a forest closely related to the Great Lakes–St. Lawrence Region and, to a lesser extent, to the Boreal Region. Red spruce is a characteristic though not exclusive species, and associated with it are balsam fir, yellow birch and sugar maple, with some red pine, white pine and hemlock. Beech was formerly a more important forest constituent than at present, for the beech bark disease has drastically reduced its abundance in Nova Scotia, Prince Edward Island and southern New Brunswick. Other species of wide distribution are the black and the white spruces, red oak, white elm, black ash, red maple, white birch, wire birch and the poplars. Eastern white cedar, though present in New Brunswick, is extremely rare elsewhere, and jack pine is apparently absent from the upper St. John Valley and the western half of Nova Scotia.

Section 2.—Forest Resources

The forested area of Canada is estimated at 1,711,893 sq. miles, and about 58 p.c. of that area is capable of producing merchantable timber. Of this productive area, 725,988 sq. miles are now accessible for commercial operations and the remainder, at present beyond the reach of economical transportation facilities, contains much valuable timber that will be brought progressively into commercial development as demand requires its use and as transportation becomes available. The great areas of forest considered commercially non-productive are nevertheless of significant value to the country in the influence they exert on climate, moisture and soil. The total forested area of Canada, classified by type of growth and by province, is given in Table 1, p. 27.

There are more than 150 tree species in Canada, of which 31 are conifers, commonly called 'softwoods'. About two-thirds of these softwoods and 10 p.c. of the large number of deciduous or 'hardwood' species are of commercial importance. Approximately 82 p.c. of the volume of merchantable timber is made up of softwood species. The dominant species existing in each forest region are given in Section 1. Detailed information is contained in Forestry Department Bulletin No. 61, *Native Trees of Canada*.*

---

* Obtainable from the Queen's Printer, Ottawa, price $1.50.

The predominant part played by the lumber and other forest products industries in the development of Canada has resulted in a widespread tendency to evaluate the forests in terms of timber alone. A growing realization of the economic importance of the non-timber values, however, is bringing about increasing recognition of the true value of the forests and is thus developing a broader concept of forestry.

[1] Ten inches D.B.H. and over (suitable for saw timber). [2] Four to nine inches D.B.H. (units of 85 cu. feet).

Tenure of Forest Land.—Corporations and private individuals own 9 p.c. of the productive forest land of Canada and 91 p.c. is in the possession of the Crown in the right of the federal or the provincial governments. Rights to cut Crown timber under lease or licence have been granted on 19 p.c. of the productive forest land; the remainder comprises unalienated productive forest areas and federal lands such as Indian reserves, military reserves, etc.

Woodlots on the 575,000 farms across Canada comprise about 5 p.c. of the total accessible productive forest. These small wooded tracts, ranging in size from three or four acres to 200 or more acres, are among the most accessible forests in Canada. Also, the woodlots of Eastern Canada are, in general, highly productive because they lie in the southern parts of the country and frequently occupy soils that are considerably higher in quality than those typical of the northern forests.

2.—Tenure of Occupied Productive Forest Land, by Province, 1960

Section 3.—Forest Depletion

General information on forest depletion and increment as well as statistics on forest fires and fire losses are presented in this Section. The scientific control of the influences that account for wastage, such as forest fires, insect pests, etc., is dealt with in Section 4.

The average annual rate and cause of depletion of reserves of merchantable timber during the ten years 1949-58, together with annual data for 1958 and 1959, are given in Table 3. Of the total depletion of the forests in the ten-year period, 92 p.c. was utilized and 8 p.c. was destroyed by fire. (Information on the extent of damage caused by agencies other than fire, such as insects, disease and natural mortality, is not available.) The average annual utilization of 3,132,182,000 cu. feet comprised 47 p.c. logs and bolts, 40 p.c. pulpwood, 11 p.c. fuelwood, and about 2 p.c. miscellaneous products. About 5 p.c. of the total utilization was exported in the form of logs and bolts and pulpwood.

The accessible portion of the productive forests of Canada, covering an area of 725,988 sq. miles, constitutes the reserve from which forest production will be obtained for many years to come. The supply of merchantable timber on this area is estimated at 588,564,000,000 cu. feet and the utilization in 1959 of 3,097,100,000 cu. feet therefore represented 0.5 p.c. of the accessible productive volume. However, it should be noted that utilization does not occur evenly throughout the accessible productive forest area but is concentrated on the relatively small area of occupied forest land (land under lease, licence or private ownership). Thus, overcutting may occur on many of these occupied areas, emphasizing the need for orderly management of all commercial forests if the forest industries are to maintain a dominant position in the Canadian economy.

The more efficient utilization of cut timber is an important factor related to forest depletion, for there is little doubt that in the past too high a percentage of the sawn log was discarded. However, changes of great significance have taken place recently in the uses of wood, permitting the utilization of sizes, qualities and species previously considered unmerchantable. The development and manufacture of rayon, cellophane and other products of the cellulose industry have extended the use of wood and the increasing production of plastic-wood products, fibre board and laminated wood has resulted in greater use of inferior grades of wood and species of trees and therefore in the more complete utilization of forest resources and the elimination of much waste.

3.—Average Forest Utilization and Depletion, 1958 and 1959, compared with Ten-Year Average 1949-58

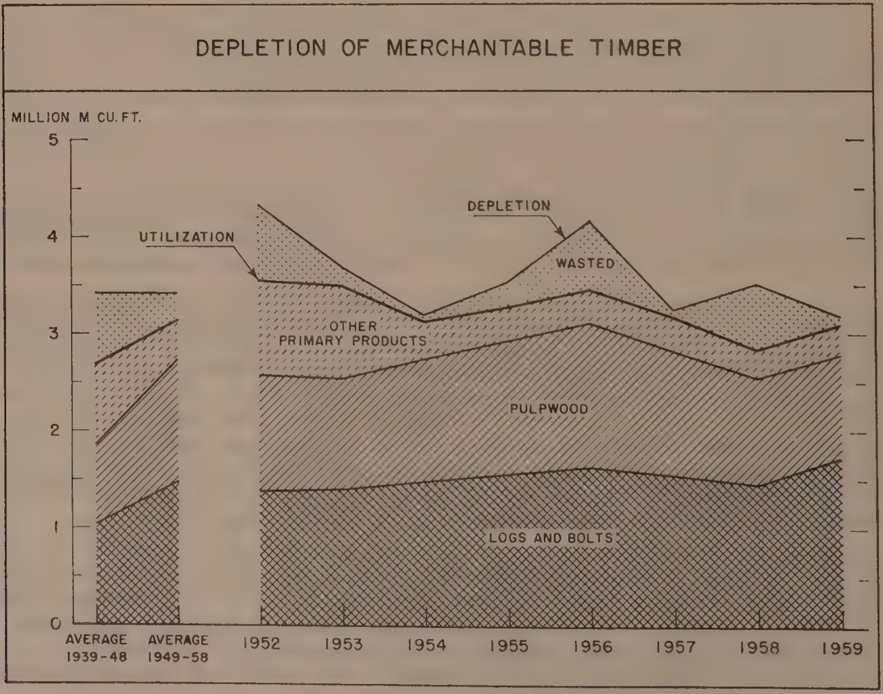
[1] Includes logs for pulping.

[2] The figure for depletion does not include wastage caused by agencies other than fire, such as insects, disease and natural mortality, for which no reliable estimates are available. It represents an average annual depletion of 7 cu. feet per acre on the accessible productive forest area; a much higher rate of depletion occurs on the more accessible occupied productive forest lands.



Forest Fire Statistics.—Forest fires in Canada during 1959 numbered 5,383 as compared with 7,817 during 1958 and an annual average of 5,804 for the years 1949-58. The area burned was only one-seventh of the 1958 figure and one-third the average area destroyed in the 1949-58 period. The amount of timber lost by fire was much less than in 1958 and, although the cost of combatting the fires was also less than in that year, it was greater than the average cost for 1949-58, probably as a result of higher wage and material costs. Newfoundland, Nova Scotia and Quebec all experienced heavier losses in 1959 than in 1958 but the situation was more favourable in the other provinces.

According to the cause-of-fire classification given in Table 6, lightning again caused the largest number of individual fires in 1959, although the number thus caused was only a little more than half the total for 1958 and not much more than two-thirds the average for the 1949-58 period; of the total, lightning caused 16 p.c. in 1959, 21 p.c. in 1958 and an average of 19 p.c. for the 1949-58 decade. Railways also caused about 16 p.c. of the fires in 1959 and campers and smokers together caused 29 p.c. The 1959 percentage for "Miscellaneous known", which classification includes fires started as a result of such incidents as falling aircraft, broken power lines and motor vehicle mishaps, stood at a little over 14 p.c. of the total; this was the second highest percentage for this classification since the record began in 1918, reflecting the changing technological patterns in Canada.

6.—Forest Fires, by Cause, 1958 and 1959, compared with Ten-Year Average 1949-58

Section 4.—Forest Administration, Research and Conservation

Subsection 1.—Federal Forestry Program

Administration.—The Federal Government is responsible for the protection and administration of the forest resources of the Yukon and Northwest Territories and of other federal lands such as the National Parks, forest experiment stations, military areas and Indian reserves. The Federal Government also administered (until repealed in 1960) the Canada Forestry Act, which provided among other things authority for operation of forest experiment stations and forest products laboratories. The chief responsibility of the Federal Government in the field of forestry is to carry out research in problems affecting the forests and their development, conservation and more effective utilization. Until the passage of new legislation late in 1960, these functions were carried out by the Forestry Branch of the Department of Northern Affairs and National Resources and the Forest Biology Division of the Department of Agriculture. The latter was responsible for all research relating to forest entomology and forest pathology, while the Forestry Branch conducted research in forest economics, in all phases of forest research including silviculture, forest management, forest ecology, tree breeding, forest inventory methods and forest fire protection, and in forest products research.

The passing of the Canada Forestry Act in 1949 was an event of great significance to federal-provincial relations in the field of forestry, as authority was given to the then Minister of Mines and Resources to "enter into agreements with any province for the protection, development or utilization of forest resources". Since that time agreements have been entered into with most of the provinces for federal financial support for programs of forest inventories, reforestation and the purchase of capital assets used in forest fire protection. The history of the federal-provincial agreements and their relation to the Canada Forestry Act is described in a special article appearing in the 1956 Year Book, pp. 459-466.

In the summer of 1958, the first representations leading to the formation of a separate Department of Forestry were made by the Canadian Lumbermen's Association, which submitted to the Minister of Northern Affairs and National Resources a brief urging that an extension service be established to bring the results of forest products research to the attention of small operators. Improved informational services were requested and also additional research in specific fields relating to sawmilling and woodworking industries. In the same year, the Canadian Pulp and Paper Association also presented a brief to the Minister asking that forest research programs of the Federal Government be increased substantially.

The House of Commons Standing Committee on Mines, Forests and Waters studied the forestry situation exhaustively during two sessions of Parliament, hearing evidence from many organizations and individuals from all parts of Canada. Its report in 1959 stressed the importance of the forest industries to the nation and recommended in part that a separate Forestry Department should be established and that the functions of the Forestry Branch of the Department of Northern Affairs and National Resources and those of the Forest Biology Division of the Department of Agriculture should be coordinated in the recommended Forestry Department. The Speech from the Throne on Jan. 14, 1960 asked for authorization for "the establishment of a new department to be concerned with affairs relating to the forests of Canada and their most effective utilization and conservation". The Department of Forestry Act received Royal Assent on Aug. 1, 1960 and became effective upon Proclamation on Oct. 1, 1960.

The Department of Forestry Act sets out the duties, powers and functions of the Minister of Forestry as extending to and including "all matters over which the Parliament of Canada has jurisdiction relating to the forests of Canada". The Minister is to consult with and inaugurate conferences of provincial or municipal authorities, universities, representatives of industry or other interested persons. The Act provides for the establishment of forestry experimental areas on federal lands and for regulations for the protection, care and management of such areas. It provides also for the submission to Parliament of an annual report on activities of the Department for each fiscal year and for various operational matters. The Act repeals the Canada Forestry Act, 1949.

The *Forest Research Branch* conducts both basic and applied research related to forest management and forest fire control. The basic research is to gain an understanding of the natural processes governing the behaviour of forests and forest fires, while the applied research is concerned with the application of such knowledge in the development of methods for the establishment, growing, harvesting and protection of forests.

Forest management research deals with silviculture, ecology and forest mensuration and inventory. Many of the silvicultural studies involve (*a*) assessing the factors responsible for the success or failure of natural regeneration following various cutting methods and treatment of seed beds, (*b*) comparing different methods of seeding and planting, and (*c*) determining the effects of different methods of intermediate cutting on the development of residual trees and stands. Studies are made of growth and yield and of successional changes in most of the important forest types. Techniques used in mensuration are constantly under review and study; new methods are tested and developed. Application of silvicultural techniques as well as research in regulation of cut and in methods of protection are aimed at determining how forests may be maintained at the highest levels of production. The relationships between forest growth and site are being studied with a view to the assessment of long-term productivity. The requirements of light, temperature and moisture that will produce optimum conditions for growth and development are being determined for the seedlings of many important species of trees. The physiological processes of growth and reproduction are under investigation for a limited number of species. In tree breeding, superior strains are selected or developed and there is a continual improvement in propagation and breeding techniques. Research in forest soils is directed toward determining the relation of tree growth and nutrition to chemical and physical properties of the soil.

Research in forest inventory methods is of increasing importance because of greatly expanded programs of forest inventories being conducted in most provinces and in the northern Territories. Data from air photographs are correlated with field observations to develop new techniques of timber estimating. The use of stand volume tables and various methods of field sampling are being investigated and compared. Research is continuing in methods for measuring tree images and tree shadows to determine heights, crown widths, canopy density and other data from photographs taken in different seasons of the year under various conditions. The use of large-scale photography of sample areas is also being investigated and studies are being made in the identification of species and sub-types.

Adequate protection of forests against fire is of vital importance in Canada. The Forest Research Branch works in full co-operation with provincial forest services in almost all phases of forest fire control. Major contributions of the Branch have been in the fields of fire danger measurement and fire control planning. Methods for classifying forest fuel types, for using prescribed fires in hazard reduction, for determining the efficiency of fire control organizations, and for preparing and analysing individual fire reports are being investigated. Studies are being continued in the use of chemicals for fire suppression and pre-suppression, and of fire fighting equipment and techniques. Another important field of endeavour is the study of lightning and other fire causative agencies.

The *Forest Entomology and Pathology Branch* conducts research on forest insects and diseases and maintains regional laboratories and field stations in all principal forested regions of Canada. The forest insect and disease survey is a Canada-wide project conducted by the Branch in co-operation with the provincial forest services and forest industries, the primary objective of which is to maintain an annual census of forest insect and disease conditions, and to detect and predict the occurrence of outbreaks. Results of the survey are made immediately available to the owners and operators of forest lands for use in planning salvage programs and directing control operations or other measures to reduce damage. An important secondary objective of the survey is extension of knowledge of the insects and fungi affecting forest trees, including their life histories, ranges of distribution, and host-parasite relationships.

The research programs of the regional laboratories are designed to lead to comprehensive understanding of the biology and ecology of the more destructive forest insects and fungi, and the causes of fluctuations in abundance or severity of damage in time and place. Problems under intensive study include insect defoliators, leaf diseases, sucking insects, dwarf mistletoes, stem cankers, bark- and wood-boring beetles, trunk and root decays, tip- and root-boring insects, and diseases of tree seedlings in forest nurseries. A recent development is the initiation of investigations of virus diseases of forest trees. Laboratory research on development, physiology, nutrition and taxonomy complements the field ecological studies of insects and fungi in the forest environment. Problems of broad national importance in insect pathology, cytology and genetics, bioclimatology and chemical control are investigated by Branch sections, which are appropriately staffed and equipped for research in these special fields.

The Forest Entomology and Pathology Branch also carries out experiments in control, utilizing cultural techniques, chemicals and biological control agents including parasites, predators and insect pathogens. Technical advisory services are provided in evaluating possibilities of eradication or control, or other applications of research results. Recent examples include recommendations for reduction of seedling losses in forest tree nurseries through cultural techniques and chemical applications; the co-operative organization of cull surveys to improve forest inventories; consultation with local authorities on the Dutch elm disease problem in New Brunswick, Quebec and Ontario, designed to limit spread and damage through control of the disease vectors and sanitation procedures; and technical co-operation with provincial governments and industrial agencies in the organization of spraying operations against the spruce budworm in New Brunswick and Quebec, and the black-headed budworm, the saddle-backed looper, and ambrosia beetles in British Columbia.

The *Economics Division* is responsible for research in the economics of forestry in addition to providing basic statistical services to the Department as a whole and co-operating in international forestry matters of concern to Canada.

Research in the economics of forestry provides the basis for intelligent decisions on the economic aspects of managing forest lands and of utilizing their products and services. It embraces the whole range of economic activities that relate to the use of forest resources, including the fields of consumption, distribution and processing of the products of the forest. In addition, it provides the information that must be considered to determine the best means of using the forest resources in conjunction with other resources in order to maximize the total net returns to be obtained from the economy.

Emphasis is being placed on the economics of production and a greatly expanded program in market research is being developed. Economists will be established in the four regions for the purpose of providing greater flexibility in carrying out regional economic studies.

The *Forest Products Research Branch* undertakes research embracing every aspect of forest products except that relating to the paper field. This research is directed toward obtaining the necessary background information and data on the properties of Canadian woods, developing new and better uses for wood products, improving manufacturing processes, and effecting a more complete utilization of wood substances available from the forest.

Two laboratories, located at Ottawa and Vancouver, undertake the research program of the Branch. Several phases of research are concentrated at the larger Ottawa laboratory while the work at the Vancouver laboratory is concerned mainly with British Columbia and Alberta species. Close relationship with the forest products industries and the users of timber is maintained to ensure that the research work of the Branch is of maximum national benefit.

The Industrial Liaison Service comprises suitably located field representatives who visit sawmill and other woodworking plants in their respective areas to keep industry aware of research development and technical advances that may assist in the solution of industrial problems. These field representatives also undertake liaison duties to keep the Branch laboratories informed of field problems on which research would be of value.

Research activities include the determination of the physical, mechanical and chemical properties of wood and their relation to adaptibility in use; studies of the factors affecting the quality of wood and of manufactured wood products; determination of the factors that cause wood waste in logging and manufacturing; research and investigation on the preservative treatment and painting of wood and the use of wood for the manufacture of cellulose, wallboards, alcohols, organic acids, and extractives; studies to determine possible new economic and more valuable uses for woods; and research aimed at determining methods and means for the practical and economical utilization of all wood substances available from the annual timber harvest. Additional work includes the application of laboratory findings to the standardization of lumber grades, development and improvement of engineering designs in wood, and the development of timber specifications for building codes of Canada. By means of numerous technical publications and through other channels, continuous effort is devoted to the widespread dissemination of research results.

Pulp and Paper Research.—The Pulp and Paper Research Institute of Canada is a corporation supported jointly by the Canadian pulp and paper industry, the Federal Government and McGill University. In its laboratories at Pointe Claire, Que., which were provided by the Federal Government, research is carried out in the whole broad field of pulp and paper processing, from the growth and harvesting of the forests through the various chemical and mechanical manufacturing processes to the properties of end-products, including the improved utilization of both liquid and solid wastes. Further details are given at pp. 488-489.

Subsection 2.—Provincial Forestry Programs

All forested land in provincial territory, with the exception of the minor portions in National Parks, forest experiment stations, military areas and Indian reserves (see Table 2, p. 28), is administered by the respective provincial governments. The forestry program of each province is outlined below.

Newfoundland.—Geographically, the Province of Newfoundland has two separate regions—the Island, and Labrador on the mainland. The productive forested land of the Island is estimated at 12,999 sq. miles and of Labrador at 62,575 sq. miles, a total of 75,574 sq. miles. Only 578 sq. miles are classified as farm woodlots. Most of Labrador's forests are leased but are as yet virtually untouched.

A large part of the forest land in the interior of the Island is leased, licensed or owned by paper companies, but a three-mile-wide belt along most of the coastline is retained as unoccupied Crown land for the purpose of providing firewood, construction material, fencing material, etc., for the local population. Within this coastal forest belt, every household has legal right to cut 2,000 cu. feet of wood a year for domestic use. This form of cutting is generally without any control or restriction but a policy is being introduced whereby cutting in certain 'management areas' is controlled by forest officers.

Commercial timber-cutting on unoccupied Crown lands has been by permit since 1952; permits for amounts up to 120 cords per person are issued by the field staff but permits for larger quantities must be approved by the government. This type of permit is almost always preceded by advertising of standing timber for sale by tender, the timber involved usually being over-mature or damaged by fire, insects or storms.

Unoccupied Crown land is divided into 21 Forest Inspector Districts averaging 281 sq. miles in size. The Island is also divided into three Forest Regions, each with a Supervisor who is in charge of Inspectors and is responsible to the Chief Forester. Twenty-seven well-equipped forest fire depots and 21 lookout towers, connected by radiotelephones, are operated within the province by the Newfoundland Government, while the two paper companies, the Newfoundland Forest Protection Association and the Canadian National Railways operate many others and offer a most efficient service contribution. Two aircraft, equipped with water-dropping tanks, are stationed at Gander throughout the fire season; they patrol forest areas and transport equipment and crews when necessary. Helicopters are occasionally used as well. In 1960, the provincial government established forest fire protection facilities in Labrador for the first time. Four depots were set up and two aircraft and a helicopter located there on charter during the fire season. Permanent forestry staff of the provincial government number 75, augmented by 100 seasonal men during the forest fire season. The two paper companies maintain their own fire protection organizations.

Forest research for Newfoundland is performed by the federal Department of Forestry. No reforestation is done in the province.

Prince Edward Island.—The Forestry Division of Prince Edward Island, formed under the Department of Industry and Natural Resources in 1951, became part of the Department of Agriculture in 1955.

Almost all of Prince Edward Island's woodland is privately owned, so that the Forestry Division is concerned mainly with planting, woodlot management and fire protection. A small nursery has been established jointly with the Federal Government to deal with the Island's needs and many people take advantage of seedlings supplied by this Division at reasonable cost to re-stock barren areas. The Federal Government pays half the cost of reforesting waste lands.

In proportion to its size, Prince Edward Island exports a great deal of pulpwood. This export, combined with the fuelwood and lumber cut each year, led the Forestry Division to inaugurate a program designed to educate the owner in the proper care and management of his woodlot.

Fire protection does not constitute too great a problem. Wooded areas are scattered in patches throughout the province and, since a network of roads makes all woodlots accessible, equipment can be brought to the scene of a fire quickly and easily.

Research is limited mainly to reforestation problems and these are studied in the provincial nursery.

Nova Scotia.—The land area of Nova Scotia is 20,402 sq. miles. Of that area, 16,389 sq. miles are classed as forested, 92 p.c. of which is regarded as productive. For Canada as a whole, 91 p.c. of the forested land is held by the Crown in the right of the federal or provincial governments, but in Nova Scotia only about 22 p.c. is so held.

The provincial Crown lands are administered by the Department of Lands and Forests through a professional staff of 27 persons. In addition, there are about 26 professional foresters associated with the forest industry in the administration of privately owned lands. The Department administers the Small Tree Conservation Act on all lands and is responsible for forest fire suppression on all lands, regardless of tenure. Forest fire detection is facilitated by 27 observation towers and an aerial patrol service, all integrated with land vehicles and headquarters by radio and telephone communication systems. Well-equipped fire suppression crews and rangers are stationed throughout the province.

The forest industry is of prime importance to the economy of Nova Scotia. There are some 500 sawmills of all sizes, one large newsprint mill and two large pulp mills in operation; a new chemical pulp mill is under construction in the Port Hawkesbury–Mulgrave area. These mills, along with the pulpwood export trade, pitprop production, boxwood and barrel production, as well as other facets, use an equivalent of 1,375,000 cords of wood annually.

An active reforestation program has been under way since 1926. Although not as ambitious an undertaking as in some parts of Canada, the program is being expanded in areas where there are less fortunate circumstances relative to natural regeneration. There are five producing nurseries in operation and another under development. Forest management programs include the construction of access roads into Crown land timber areas under the Federal-Provincial Agreement. Timber, pulpwood and Christmas trees are sold through public tender and cutting is under the recommendations of the district foresters of the Department of Lands and Forests. Inventory surveys, regeneration studies and experimental cuttings are conducted on Crown lands.

Forest research is carried on by Federal Government agencies and the Nova Scotia Research Foundation (see pp. 387-388). Investigations involve stand improvements, cutting methods, and insect and disease activities. Extension projects include an active fire prevention campaign, a motion picture program for schools, distribution of information on forest and wildlife conservation, promotion of the Christmas tree industry, and preparation of articles for general distribution, for newspapers and for magazines.

New Brunswick.—More than 85 p.c. of the area of New Brunswick is classed as productive forest, of which the Crown, in right of the province, owns about one-half. About 2 p.c. is owned by the Federal Government and the remainder is privately owned. The report of a provincial forest inventory, part of the national forest inventory, was published in 1958. The productive forest area is estimated at 23,808 sq. miles and the total volume of wood in merchantable sizes at 16,900,000,000 cu. feet; of the latter, coniferous species make up 71 p.c. and deciduous species 29 p.c.

Protection from forest fires, the first requirement for forest conservation, is mainly the responsibility of the Department of Lands and Mines which also carries out duties in connection with game management and protection, colonization, parks, camp grounds and picnic sites, and the administration of provincial Crown lands. A large-scale aerial spraying program to protect balsam fir and spruce from the spruce budworm has been carried on since 1952 by a Crown company sponsored by the federal and provincial governments and representatives of the forest products industries.

Timber licences issued by the province authorize operators to cut and remove forest products in accordance with forest management plans and cutting permits. Stumpage dues are paid to the province when products are cut by the licensees.

New Brunswick does not maintain a forest research organization but co-operates with the federal Department of Forestry in that field. The University of New Brunswick also has undertaken a small number of forest research projects in co-operation with the National Research Council, the provincial government, and other interested organizations. In the autumn of 1960, the New Brunswick Department of Agriculture employed a forestry engineer as a first step in developing and expanding a provincial tree farm program.

Quebec.—The forested lands of the Province of Quebec cover an area of 378,080 sq. miles extending from its southern borders to latitude 52° north, between the frontier of Labrador in the east, and the Eastmain River Basin in the west. Of this total, 89,131 sq. miles are classed as occupied productive forest land, 23,175 sq. miles of it privately owned, 227 sq. miles federal Crown forests and the remainder provincial Crown land on which leases and permits have been granted. Thus, approximately 289,000 sq. miles of the forest lands of Quebec are inaccessible or vacant. About two-fifths of the annual cut comes from privately owned lands.

The limits reserved for forest industries are administered by the Department of Lands and Forests and the technical work such as inventory, reforestation, superintendence of cutting, control of culling, verification of plans for development, collection of stumpage dues, etc., is the responsibility of the Forest Service. These limits are either leased by auction after public notice has been given or assigned under a special law. The price of the licence is fixed by auction or by Order in Council subsequent to specific legislation. The government reserves the right to dispose of the water powers situated on the limits leased.

A tree-felling permit, which is valid for one year, is renewable if the holder has complied with the conditions imposed; it may be transferred with the authorization of the Minister of Lands and Forests. The lessee of a limit must pay a ground rent in addition to the price of licence and must forward, three months before the cutting begins, a plan of operations. Wood cut must be measured by a licensed culler and at the end of the operations the limit holder must produce a sworn statement of quantities cut.

The Forest Service endeavours to promote the use of silvicultural methods among the owners of farm woodlots and small forest areas.

Quebec's forest protective system comprises three organizations—the Protective Service, the protective associations and the non-affiliated lease holders or owners. The Protective Service is a government body established within the Department of Lands and Forests in 1924 to enforce legislation and regulations governing forest fire protection and to protect vacant Crown lands, township reserves and colonization territories. The protective associations, of which there are six, are syndicates of lease holders and of owners who have availed themselves of their right to form an association to satisfy the law which compels them to protect their limits or private forests of 2,000 acres or over. Members assume operating expenses in proportion to the area owned by each but the Department assumes half the costs of fire fighting incurred by the associations. The third group is composed of lease holders and of owners who prefer to discharge their obligations personally as far as forest protection is concerned. They enjoy the same privileges and their obligations are the same as those imposed upon the associations.

To perpetuate the forestry program of the province, the Department has established a number of nurseries, the first at Berthierville in 1908. This nursery has three sections: one wooded with a variety of valuable species of mature age, one serving agricultural purposes, and another devoted to forestry experiments and the cultivation of trees for reforestation or ornamentation. More recently, the Grandes Piles nursery and the Gaspe nursery were organized and there are also nurseries in the following counties: Abitibi-East, Témiscamingue, Saguenay, Îles de la Madeleine, Rimouski, Roberval, Rivière du Loup, Témiscouata and Chicoutimi. Their object is the preparation of plants for reforesting nearby districts. 'Floating' nurseries, supervised by the engineers of the Forest Extension Bureau and intended especially for growing reforestation plants for private properties, are located at Pont Rouge, Sherbrooke, Scott, St. Hyacinthe, Victoriaville, Mont Joli and St. Pascal. The plants are supplied free of charge on request. A dynamic reforestation program is now under way in the province, with an ultimate objective of 10,000,000 plants yearly on private grounds.

The Bureau of Silviculture and Botany and the Forestry Products Laboratory, both subsidized by the Department, are actively engaged in scientific research work in the forestry field. The Bureau studies the possibilities of utilizing spoil-heaps of gold and asbestos mines, tests the fertility of soils in the spruce groves, classifies forests according to type of vegetation, and studies growth and yields of stands in the timber limits by means of permanent research spots. The Forestry Products Laboratory, located at the Duchesnay Forestry Station, studies developments in the field of chemical conversion of wood and in the use of forestry by-products.

Ontario.—Steady development in the management of the province's forest resources continued throughout the year ended Mar. 31, 1960. Forest land under the jurisdiction of the Department of Lands and Forests, including 42 Agreement Forests and five Nursery Forests, was divided into 220 areas, each covered by a management plan; this was a considerable increase over the 125 plans of the previous year. Included in the 220 areas were 72 Crown Management Units with plans prepared by the Departmental staff, consisting of 66 management plans in operation covering 51,613,522 acres, and six areas with 1,694,856 acres under inventory. Also included were 101 Company Management Units with plans prepared by licensees, consisting of 62 plans in operation covering 39,385,600 acres, 20 new plans under analysis comprising 8,643,840 acres, and 19 plans in process of preparation covering 16,231,680 acres.

Although there was a reduction of 41,200,000 cu. feet in the amount of lumber cut from Crown lands as the woods industry continued to cut back operations (more than 92 p.c. of the reduction being caused by a drop in pulpwood production), the cut of such species as hemlock, cherry and oak showed slight increases. There was almost nine times as much softwood cut as hardwood—264,252,540 cu. feet and 31,554,930 cu. feet, respectively. Timber revenues to the Department in 1960 maintained the decade's annual average, which was more than double that of the ten years prior to 1951.

Preliminary reports to Dec. 1, 1960 documented 956 forest fires with 31,386 acres burned over. More than one-third of the fires took place in July and accounted for 27,575 acres of the destroyed area. Sioux Lookout district where 20,303 acres were burned over was hardest hit, followed by Geraldton district where 4,772 acres were burned over. Lightning caused 310 fires and 646 were caused by the carelessness of forest users. However, it is noteworthy that the proportion of man-caused fires in 1960, at 68 p.c., was the second lowest for the past 15 years (in 1955, 59 p.c. of the fires were man-caused). This trend, despite increased use of the forests, points in part to the success of the Department's work in fire prevention education through radio, television, publications, contests, lectures, films and advertising. Although the 1960 average of 33 acres destroyed per fire was considerably higher than the 1959 average of five acres, the latest ten-year average (1951-60) of 71.2 acres destroyed by each fire was an encouraging decrease from the 117.5-acre average recorded for 1941-50.

Detecting fires in their infancy and confining them to small areas has been accomplished largely by the Department's continual improvement in equipment and fire fighting methods; many of these advancements have been employed in other parts of the world. Water-dropping from aircraft is still one of the most effective means of fire containment in use. Late in 1959, work commenced on the development of float-type cargo-dropping racks for *Beaver* and *Otter* aircraft, designed to replace manual dropping through the camera hatch. The Air Service Section of the Department, with its fleet of 46 aircraft, spent 4,053 hours on fire-ranging tours, more than one-third of the total hours logged in all its operations, which included transporting personnel on administrative duties, fish and wildlife services, forest management and mercy flights.

During the year ended Mar. 31, 1960, 41,682,125 units of nursery stock were furnished through the Reforestation Section, an increase of more than 8,000,000 over any previous year. There were 23,448,118 trees planted on Crown land, 13,809,125 on private land and 4,114,129 on lands managed for counties, townships and conservation authorities. Tree seeds were collected, processed and sown, and nursery operations continued to develop toward an output of approximately 60,000,000 units per annum.

Areas managed by the Department in agreement with counties, townships and conservation authorities increased by 7,348 acres during 1960 to reach a total of 143,312 acres, contained in 42 Agreement Forests. These constituted 22 county forests with 94,512 acres, six township forests with 1,774 acres and 14 conservation authorities with 47,026 acres. Amendments to the Forestry Act provided that a conservation authority in a municipality may receive a grant for the purpose of assisting in the acquisition of land for forestry purposes.

Silviculture—reproducing, tending and improving forest crops—was carried out under two main phases: (1) artificial regeneration—more than 91,000,000 trees were planted during the past five years and a program to assess tree survival was started; and (2) stand improvement—which continued the establishment of demonstration units in various regions to study silvicultural characteristics of commercial trees and the training of forest management personnel. Stand improvement work was done on 12,227 acres during 1959-60. Forest management improvements required research into cutting practices, thinning by chemical and mechanical means, and the use of fire for silvicultural purposes.

Investigations were carried on in evaluation of site features of soil, climate and vegetation as factors affecting forest production and multiple land use. Reforestation procedures were advanced with research into culling and grading of nursery stock, root pruning, comparative studies of seedlings versus transplants, and specialized planting techniques. Experiments in tree breeding and genetics have shown that some hybrids between Himalayan and native white pine are standing up very well under repeated infection with blister rust, Ontario's major tree disease. Portions of seeds from the Chapleau area were irradiated with increasing doses of X-ray at the Atomic Energy of Canada Limited laboratories as part of a long-term project to determine whether irradiation will induce mutations of white pine resistant to blister rust.

During 1960, 20,157 sq. miles of the province were surveyed by air as part of the program to re-photograph the present exploitable forest area before 1967.

Manitoba.—The forests of Manitoba are administered by the Forest Service, a Branch of the Department of Mines and Natural Resources. The Service is headed by a Provincial Forester and the province is divided into four Forest Districts—Northern, Southern, Eastern and Western—each with a District Forester in charge. The Whiteshell Forest Reserve, which is an important recreational area, is also supervised by a Forester. Each Forest District is subdivided into Forest Ranger Districts of which there are 40, each in charge of a Forest Ranger.

The cutting of mature timber is governed by timber sale, licensed timber berth, pulpwood lease, or timber permit. Timber sales are disposed of by public auction and cover periods of from one to seven years; timber berths cover certain areas granted before 1930, the date of the transfer of the natural resources from the Federal Government to the province; pulpwood leases are granted over an area of 2,748 sq. miles; and timber permits are granted to settlers and small operators at appraised rates for a period of one year or less. On the basis of a forest resources inventory completed in 1956 and other information, working plans with annual allowable cuts on a sustained-yield basis have been brought into operation in the more accessible areas.

Fire protection is one of the most important activities of the Forest Service. Fires are detected by air patrol, lookout tower and road patrol and rapid communication is maintained within the Service by radio and telephone. The Air Service transports men and equipment to fires in areas beyond the reach of roads. The main air base is at Lac du Bonnet and summer air bases are maintained at The Pas, Norway House and Thicket Portage. The total area under fire protection is about 97,000 sq. miles.

Regeneration of the forest is dependent mainly on natural means although 5,250,000 trees were planted during the past five years as part of the Federal-Provincial Agreement (see p. 477). The Pineland Forest Nursery is operated at a point near Hadashville to supply planting stock for denuded areas of Crown land and to furnish farmers with shelter-belt and woodlot seedlings.

The province has no forestry research organization but co-operates with several federal services which maintain two research areas. The Department co-operates fully with federal authorities in investigating and controlling forest damage resulting from insects and diseases. The Forest Service also carries out public education in the fields of fire prevention and forest conservation. Use is made of all usual methods including radio, television, newspapers, signs, talks to school children and club members, film tours, etc.

Saskatchewan.—The forests of Saskatchewan, including watered areas, are located mainly in the northern half of the province and cover 147,360 sq. miles or 58 p.c. of the total area. Provincial forests constitute approximately 92 p.c. of all forest land in the province and are managed and developed by the Forestry Branch of the Department of Natural Resources.

The Forestry Branch, consisting of six divisions—Administration, Fire Control, Forest Management, Forest Research, Inventory and Silviculture — is responsible for developing and evaluating forest policies and management programs based on the findings of inventory and research. The responsibility for carrying out such policies and programs is borne by the Regional Administration Branch. For purposes of resource administration, the province is divided into five regions, each under the supervision of a Regional Superintendent. The regions are subdivided into Conservation Officer Districts which vary in size according to resource base and population to be served.

A major responsibility of the Forestry Branch is the development of techniques in the prevention, detection and suppression of forest fires. A network of 89 lookout towers equipped with two-way radios is maintained throughout the province and is supplemented by five aircraft on regular patrol duty during the high-hazard periods. A group of smoke-jumpers has been trained to parachute on remote fires. This unit is in constant readiness during the fire season and takes immediate suppression action which it maintains until relieved by overland crews. Northern Saskatchewan's communication system, with more than 850 two-way radio sets in operation in towers, vehicles, aircraft and forest camps, plays a vital role in the detection and suppression of forest fires. These activities have been assisted recently by the use of a helicopter.

Alberta.—The 158,529 sq. miles of provincial forest in Alberta are administered by the Forests Division of the Department of Lands and Forests at Edmonton. The Division is composed of five forestry branches under a Director of Forestry—Administration, Forest Protection, Forest Management, Forest Surveys, and Radio.

The Administration Branch supervises all branches, maintains general control over revenue and expenditure, deals with personnel and conducts a Forestry Training School which offers in-service training for forest officers and other employees.

The Forest Protection Branch has charge of the protection of the forests and of all field personnel. For ease of administration the forested area has been divided into seven Divisions, each responsible for the forest within its boundary. These Divisions are composed of Ranger Districts in which all activities are supervised by the district forest officer responsible to his divisional superintendent. The divisional staffs include: forest superintendent, assistant forest superintendent, divisional forester, chief ranger, mechanical foreman, chief check scaler, assistant check scaler, divisional clerk, assistant clerk, radio operator, stenographer, and seasonal help such as standby fire crews, forest lookout men and general labourers and construction crews. These employees are responsible for fire prevention and suppression, supervision of logging and milling operations, timber cruising, and construction and maintenance of forestry projects.

The functions of the Forest Management Branch include the approval and acceptance of management and annual operating plans prepared for other Crown lands, proper land use, proper disposal of Crown timber and the direction of field officers in the administration of all contracts related thereto. This extends to all phases, including acceptance of applications, cruising of timber, drawing up of contracts, periodic inspections of areas to assure proper logging and utilization practices, scaling of products cut, collection of dues and reforestation of areas denuded through cutting, fire, etc.

The Forest Surveys Branch maintains the provincial forest inventory and prepares and maintains detailed inventories by management units; prepares long- and short-term management and protection plans; provides timber application forest-type maps; conducts other work pertaining to photogrammetry and forest-cover maps; and provides technical drafting and mapping services to the Forest Service and general public.

Development and maintenance of communications is the function of the Radio Branch. Central stations are maintained at Edmonton and Calgary with smaller stations located at divisional headquarters, lookout towers and ranger districts. A number of portable, mobile and airborne stations combine with the fixed stations to form a flexible and comprehensive communications network for both fire detection and suppression operations.

Conservation of 9,000 sq. miles of forest comprising the Rocky Mountains Forest Reserve is administered by a joint provincial-federal agency—the Eastern Rockies Forest Conservation Board with offices at Calgary. The area is composed of three forests which are subdivided into ranger districts. The Superintendent in charge of each forest is responsible to the Director of Forestry; his decisions are based on policies formed by the Board, which comprises one federal and two provincial members. This Reserve includes the headwaters of the main prairie river system.

Research in general is carried out by the federal Department of Forestry, which maintains the Kananaskis Experiment Station.

British Columbia.—The productive forest land of British Columbia in 1958 was inventoried at 208,411 sq. miles and, in addition, there were 59,227 sq. miles of forest land classed as non-productive. Of the productive area, immature timber occurred on 95,739 sq. miles; 84,275 sq. miles carried matured timber with a total volume of 318,000,000,000 cu. feet; 28,397 sq. miles, including areas of recent burn, cut-over or windfall not yet re-stocked, were unclassified.

For administrative purposes, the province is divided into five Forest Districts with regional headquarters at Vancouver, Prince Rupert, Prince George, Kamloops and Nelson. Further decentralization of authority is effected by subdivision of the Forest Districts into Ranger Districts. There are approximately 25 Ranger Districts in each Forest District. Twelve directional, servicing or policy-forming divisions constitute the head office of the Forest Service at Victoria.

Vigorous efforts are being made to bring British Columbia's forest resources under sustained-yield management and the forest industries are making definite progress toward total utilization of their raw materials. The problem is urgent despite the fact that, with a present annual cut of approximately 1,100,000,000 cu. feet, the total inventory would appear sufficient to support present needs in perpetuity. One of the more spectacular results of sustained-yield administration has been the swinging of a greater proportion of the annual forest harvest to the interior of the province. For many years, the over-cut coast (wet belt) forests have accounted for from 65 p.c. to 80 p.c. of the total forest cut each year. More recently, however, the interior percentage has risen and in 1959 almost 50 p.c. of the total cut originated there. For all practical purposes, the entire interior forest is publicly owned; the great majority of the privately owned, leased or licensed forests are on the coast.

Several systems of timber disposal are in effect. The most publicized is the Tree Farm Licence, which constitutes a contract between the government and a company or individual whereby the latter agrees to manage, protect and harvest an area of forest land for the best possible return, in exchange for the right to the timber crop on the area in perpetuity. Provincial Forests, Public Working Circles, and Sustained-Yield Units are the governmental equivalent of the Tree Farm Licence with the timber, when it is ready for cutting, being disposed of by public auction. Management, silviculture, road-building and protection on such areas are the responsibility of the Forest Service. Other tenures of lesser importance are Tree Farms, Farm Woodlot Licences, and Timber Sales.

Protection of the forest, particularly from fire, is still a major problem although the public is becoming more cautious. Improved fire fighting techniques, the use of aircraft for patrol and transportation, employment of helicopters, and a gradually expanding system of lookouts are employed. However, the province suffered two disastrous fire seasons in the past three years. In 1958, which was the worst season on record, 4,120 fires were reported and in 1960, 4,113 fires. The cost of fire fighting in these two years was $5,988,000 and $5,188,000, respectively. Close liaison with the federal Department of Forestry, which maintains laboratories in Vernon and Victoria, provides information about insect and fungal enemies of the forest.

Subsection 3.—The Pulp and Paper Research Institute of Canada*

The Pulp and Paper Research Institute of Canada is a centre of research and learning concerned with virtually every aspect of the production and use of pulp and paper products. It was established in 1913 as a branch of the Dominion Forest Products Laboratories and in 1927 was reorganized under the joint sponsorship of the Canadian Pulp and Paper Association, the Federal Government and McGill University. The Institute staff carries out fundamental research and some applied research in the fields of woodlands operations and pulp and paper mill operations. In addition, in co-operation with McGill University, it trains postgraduate students who are working toward master's and doctorate degrees in physical chemistry, wood chemistry, or chemical and mechanical engineering, and whose theses subjects lie in fields of interest to the pulp and paper industry.

The Institute has occupied, since 1927, a building on the McGill campus erected by the pulp and paper industry and in 1958 a new building was completed at Pointe Claire on the western outskirts of Montreal by the Government of Canada in lieu of its former annual financial grant. The building houses Institute staff and facilities formerly located in temporary quarters. The Institute's facilities include: organic and physical chemistry, physics, hydraulics and engineering laboratories; pilot plants for chemical pulping, pulp and chip refining and waste liquor pyrolysis; a greenhouse and other facilities for woodlands research; an extensive library; shops and special facilities for pulp and paper testing and for photographic and microscopic (both light and electron) studies of wood, pulp, and paper. It has a staff of about 155.

The Institute's research activities comprise a basic program, contract research, and technical services. The basic program is supported by assessments from the Maintaining Membership (some 42 companies, representing more than 100 mills and about 95 p.c. of the total production of the Canadian industry) and by a basic grant from the Canadian Pulp and Paper Association. It comprises research of interest to the industry broadly, as distinct from that which is the concern of a single company only or of a small segment of the industry.

The projects in the basic program range from studies of the growing seedling in the forest to the converted pulp and paper product, and fall into seven broad classifications: woodlands, mechanical pulping, chemical pulping, paper making, process control, product quality and waste utilization. The emphasis is primarily on fundamental and exploratory studies. The Institute is regarded as a centre for broad, long-range and uninterrupted studies of basic principles which individual pulp and paper companies would find difficult to justify in terms of immediate applied objectives. Moreover, the Institute is a centre of highly specialized equipment and manpower which individual companies would not normally have.

In addition to its permanent staff, the Institute, in co-operation with McGill University, has some 25 graduate students working on fundamental projects in the background of pulp and paper technology, which also serve as their theses topics. The head of the Institute's Wood Chemistry Division, who is also the E. B. Eddy Professor of Industrial and Cellulose Chemistry at McGill, directs graduate student work on such subjects as the behaviour of the materials of which wood is made—cellulose, lignin and hemicelluloses. The head of the Institute's Physical Chemistry Division, also a Research Associate in the McGill Chemistry Department, directs graduate student work in the physical chemistry of fibres, e.g., the forces which cause cellulose fibres in a water suspension to mat together to form paper. The head of the Institute's Chemical Engineering Division, an Associate Professor of Chemical Engineering at McGill, directs graduate students in such chemical studies as the rate of drying of droplets and fibres. These Division Heads are assisted by other members of the Institute's staff who likewise hold concurrent honorary positions at McGill.

---

* Prepared by B. W. Burgess. Secretary, Pulp and Paper Research Institute of Canada, Montreal, Que.

The Institute also undertakes contract research projects on a cost reimbursement basis for individual companies or groups of companies in the pulp and paper or allied fields. The larger of these co-operative contracts have been concerned with problems of particular segments of the Canadian pulp and paper industry, such as the investigation into the causes of corrosion in alkaline pulping equipment and the recent study of the rapid deterioration of paper machine wires.

A further function of the Institute is to provide a broad range of technical information services to the industry and, to some extent, to other industries and the public. It maintains a specialized library for this purpose which supplies bibliographies, abstracts, translations and critical reviews to the scientific staff and the industry.

Section 5.—Forest and Allied Industries

This Section is concerned with the many industries employed in the felling of timber in the forest and its transformation into the numerous utilitarian shapes and forms required in modern living. The basic industries provide the raw material for sawmills, pulp and paper mills and for a wide range of secondary industries that convert the products of the basic industries into more highly manufactured goods such as veneers and plywoods, sash and doors, furniture, and a vast range of industries using wood in any form in their processes. These industries, especially the pulp and paper industry and the lumber industry, contribute substantially to the value of the export trade of Canada and thereby provide the exchange necessary to pay for a large share of the imports purchased from other countries, particularly the United States.

Subsection 1.—Woods Operations

In connection with operations in the woods, the forests provide not only the raw materials for the sawmills, pulp mills, veneer mills, charcoal, excelsior and other plants, but also the logs, pulpwood and bolts for export in the unmanufactured state, and fuel, poles, railway ties, posts and fence rails, mining timber, piling and other primary products that are finished in the woods ready for use or export. A number of minor forest products help swell the total, such as Christmas trees, cascara bark, balsam gum, resin, etc.

Estimates of woods operations attempt to give actual production figures for all items and are based partly on provincial forest service data for volume. Value, as currently estimated, excludes transportation costs.

7.—Value of Woods Operations, by Product, 1955-59

Product	1955	1956	1957	1958	1959
	$	$	$	$	$
Logs and bolts	393,860,833	443,888,332	409,226,544	311,746,286	344,424,102

---

[1] In estimating the annual drain on Canada's forest resources, certain converting factors have been used, each of which represents in cubic feet the quantity of merchantable wood used to produce one unit of the material in question. The factor for logs and bolts for the British Columbia coastal region is 175 and for the remainder of Canada 200. Other factors: pulpwood and round mining timber 85, fuelwood and wood for charcoal 80, poles and piling 15, hewn railway ties 5, fence posts 1.2 and fence rails 1.

[2] Converted to rough cords and included with pulpwood.

[3] Chiefly Christmas trees but also includes balsam gum, cascara bark, etc.

9.—Equivalent Volume of Solid Wood Cut and Value of Products of Woods Operations, by Province, 1957-59

1958	67,327	338,283,658	68,594,657	570,015,851	638,610,508
1959^{p}	82,551	347,405,901	57,003,561	658,712,439	715,716,000

[1] Prior to 1958, employment statistics included those individuals employed in the transportation of products from the woods to the manufacturing plant or user. In order to report only employment in woods operations, and to avoid duplication of data collected elsewhere, 1958 and subsequent employment statistics have been compiled to conform with this principle.

Subsection 2.—The Lumber Industry

The manufacture of sawn lumber is the second most important industry in Canada depending on the forest for its raw materials.

The total number of sawmills, tie, shingle, lath, veneer, stave, heading and hoop mills and mills for cutting-up and barking or rossing of pulpwood, reports of which were compiled for 1959, was 5,684 as compared with 5,769 in 1958. Mills sawing less than 15,000 ft. b.m. are excluded but account for less than one-half of 1 p.c. of the total lumber production. Employees numbered 48,657 and wages and salaries amounted to $144,759,203. Logs, bolts and other materials and supplies of the industry were valued at $313,434,108, the gross value of production was $571,813,381 and net value $248,525,472.

Lumber production in Canada reached its maximum in 1955 at 7,920,033,000 ft. b.m., decreasing in 1956 and 1957 to 7,739,603,000 and 7,099,758,000 ft. b. m., respectively. Increases were recorded in 1958 and 1959 to 7,179,080,000 and 7,591,419,000, respectively. Value of lumber produced in the years 1955 to 1959 decreased from $541,563,241 in 1955 to $490,539,826 in 1959.

11.—Quantity and Value of Lumber Production and Value of All Sawmill Products, by Province, 1958 and 1959

Lumber Exports.—Exports of planks, boards and square timber are given in Chapter XX on Foreign Trade.

Subsection 3.—The Pulp and Paper Industry

The manufacture of pulp and paper has been the leading industry in Canada for many years and the postwar development of the industry has more than kept pace with the vast industrial growth of the nation. Pulp and paper stands first among all industries in net value of shipments, in exports, in total wages paid and in capital invested. It is the largest consumer of electric energy and the largest industrial buyer of goods and services, including transportation, in the land. The industry has a newsprint output more than three times that of any other country and provides about 45 p.c. of the world's newsprint needs.

There are three classes of mills in the industry. In 1959, 27 were making pulp only, 26 were making paper only and 74 were combined pulp and paper mills.

The industry includes several forms of industrial activity: operations in the woods with pulpwood as a product, the manufacture of pulp and paper of all kinds, and the manufacture of paperboards. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and some lumber manufacturers divert a portion of their spruce and balsam logs to pulp mills. Only a small percentage of the pulpwood cut in Canada is exported in raw or unmanufactured form.

14.—Production, Consumption, Exports and Imports of Pulpwood, 1949-58

Year	Production of Pulpwood in Canada[1]			Canadian Pulpwood Used in Canadian Mills[1]	Canadian Pulpwood Exported Unmanufactured	Imported Pulpwood Used in Canada

[1] Given in terms of rough or unpeeled wood.

Pulp Production.—The manufacture of pulp, the second stage in this industry, is carried on by mills producing pulp only and also by paper manufacturers operating pulp mills in conjunction with paper mills to provide their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export. Spruce, supplemented by balsam fir in the east and by hemlock in the west, is the most suitable species for the production of all but the best types of paper.

The preliminary preparation of pulpwood is frequently carried on at the pulp mill but there are also a number of cutting-up and rossing mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for export. Pulpwood is measured by the cord (4′ by 4′ by 8′ of piled material). One cord of rough pulpwood contains approximately 85 cu. feet of solid wood, and one cord of peeled pulpwood 95 cu. feet.

The manufacture of 10,832,200 tons of pulp produced in 1959 entailed the use of 13,535,051 cords of rough pulpwood valued at $349,827,131 and the equivalent of 1,455,651 rough cords of other wood (i.e., sawmill chips, slabs and edgings, sawdust, butts, cores, etc.) valued at $25,185,120. The total value of materials used in the manufacture of pulp was $455,135,786.

World Newsprint Statistics.—Since 1913 Canada has led the world in the export of newsprint. Figures for the leading producing countries for the two latest years available are given in Table **22**; 1939 figures are included for comparative purposes. The six countries listed accounted for 73 p.c. of the estimated world production in 1959, Canada contributing about 45 p.c.

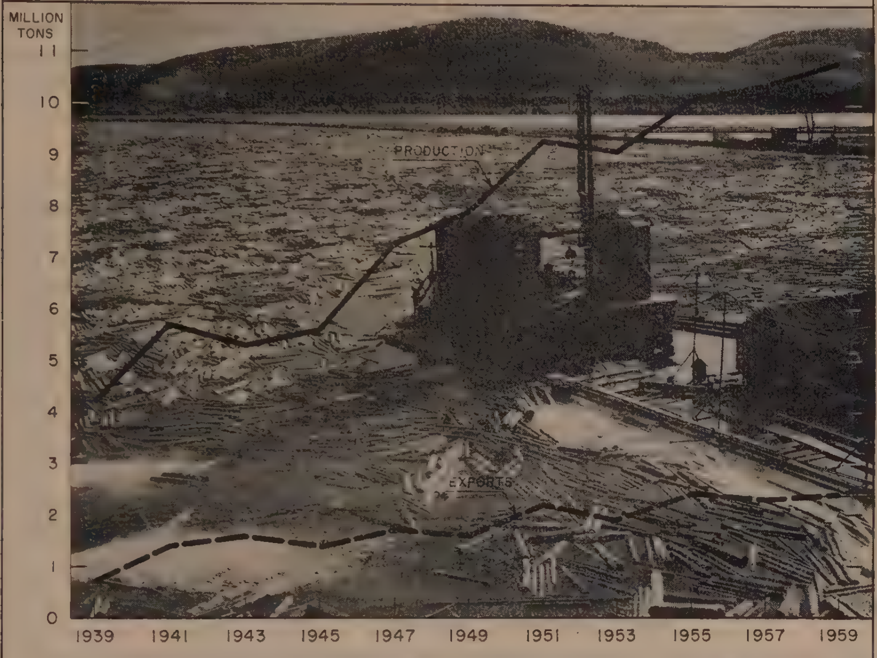
Statistics of the Combined Pulp and Paper Industries.*—The manufacture of pulp, the manufacture of paper and the manufacture of products made of paper may, under certain conditions, be treated as three industries for they are frequently carried on in separate plants by entirely independent companies. The manufacture of basic stock and the converting of this paper into stationery and other highly processed paper products are often combined in one plant. This conversion of paper within the pulp and paper industry represents only a small part of Canada's production of converted paper and boards, the bulk of which is still made in special converting mills classified in other industrial groups.

The presence of these different combinations in one mill makes it difficult to separate many of the statistics relating to the manufacture of pulp, basic paper and converted paper products. All converting operations carried on in paper mills in this industry are attributed to the particular industrial group of converting plants to which they properly belong. Including manufacturing operations as far as the basic paper-making stage, there were altogether 127 mills in operation in 1959. Employees numbered 65,028 and their salaries and wages amounted to $322,311,304, as against 64,084 employees earning $307,415,615 in 1958. If the pulp made for their own use in combined pulp and paper mills is disregarded, the total value of materials and supplies used in the industry as a whole

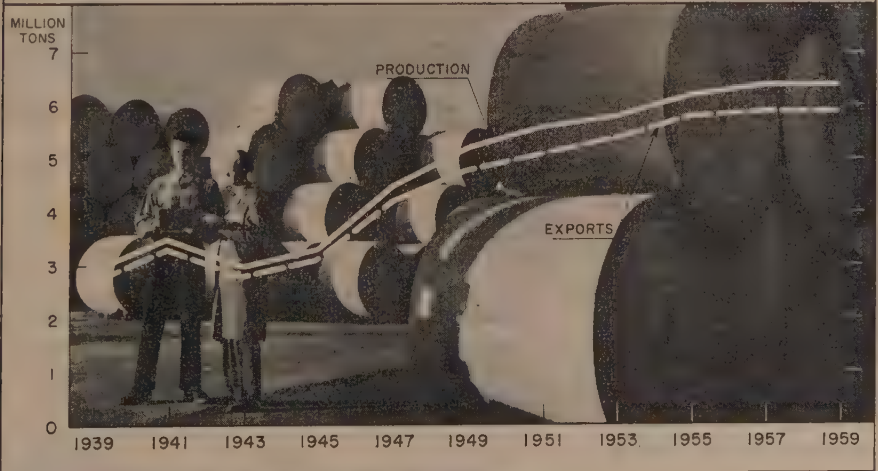
---

* See Chapter XIV for further particulars regarding the pulp and paper and paper-converting industries.

PRODUCTION AND EXPORTS OF PULP, 1939-59



PRODUCTION AND EXPORTS OF NEWSPRINT, 1939-59



amounted to $628,269,346 in 1959 compared with $597,804,877 in 1958; the selling value of factory shipments to $1,499,585,644 in 1959 and $1,394,679,180 in 1958; and value added by manufacture to $761,035,456 in 1959 and $702,950,789 in 1958.

In world trade, pulp and paper are generally Canada's main commodities—newsprint alone, over a considerable period, has brought Canada more export dollars than wheat, nickel or any other single commodity.* The United States market absorbs annually over 80 p.c. of all pulpwood exports and the same percentage of the pulp and the paper shipments of Canada.

Subsection 4.—The Veneer and Plywood Industries

The production of hardwood veneer and plywood in Canada is confined largely to the eastern provinces. Changes in manufacturing methods applied to hardwood plywood resulted in its adaptation to many uses, particularly to wall finishes for homes and other buildings.

Softwood veneer and plywood are produced almost entirely in British Columbia. Douglas fir is most commonly utilized because of the availability of large diameter logs of this species from which large sheets of clear veneer can be obtained. The use of synthetic resin adhesives is responsible for this product, which has become almost indispensable to the construction industry—for wall panels, concrete forms, roofing, sheeting and house sub-floors; for construction of silos, cribs and caissons; for box-car linings, bus bodies, trailers, and watercraft; for box panels and crate linings, case goods and core-stock for furniture; and for plywood-faced doors and many other items.

The heating of glued veneers in moulds by high-frequency electric fields (dielectric heating) permits the manufacture of shaped plywood which is now being used for furniture, radio cabinets and similar products.

Veneers of Canadian manufacture are not confined to species native to Canada. A number of imported woods of special decorative value are veneered successfully and provide the furniture industry with a wide choice of finishes. Exports of veneer and plywood produced in Canada increased in value from $969,256 in 1938 to a high of $32,351,005 in 1959.

---

* For reasons given in Section 1, Part II of the Foreign Trade Chapter, gold is excluded from Canadian trade statistics.

Subsection 5.—The Wood-Using Industries

The wood-using group comprises thirteen industries,* other than sawmills and pulp mills, using wood as their principal raw material. Most of these industries obtain from the sawmills the wood they transform into planed and matched lumber, boxes, barrels, furniture, caskets and other manufactured or semi-manufactured products but the veneer and plywood and excelsior industries usually manufacture their products direct from logs and bolts.

This wood-using group does not include every industry into which wood enters as a raw material but only those producing commodities where the chief component is wood. There are a number of industrial groups in which wood is an important raw material as in the manufacture of agricultural implements, musical instruments, etc., and others such as the manufacture of some types of machinery in which wood is necessary but only in comparatively small proportion.

Wood is used indirectly in the manufacture of all-metal products such as wooden patterns and wooden foundry boxes in making metal castings. Wood in the form of barrels, boxes and other containers also enters into the distribution of commodities of all kinds.

In 1959 the wood-using group, comprising 4,130 establishments, gave employment to 75,132 persons and paid $243,102,524 in salaries and wages. The gross value of its products was $853,313,012 and the net value $396,273,502.

The importance of secondary industry in providing employment will be appreciated when it is noted that the number of employees in the wood-using group was more than 75,000, as compared with sawmills with 48,659 employees and pulp and paper mills with 65,028.

24.—Wood Used by Wood-Using Industries, 1956-59

Item		1956	1957	1958	1959
Sawn lumber	M ft. b.m.	2,468,620	2,238,659	2,144,037	2,346,955
	$	180,238,737	160,772,141	155,870,255	158,036,217

Other wood used	$	8,011,668	6,924,556	7,167,332	6,977,057
Totals	$	**273,494,141**	**246,623,490**	**241,763,730**	**248,139,057**

Subsection 6.—The Paper-Using Industries

The paper-using group comprises three industries† engaged primarily in manufacturing commodities of paper and paperboard. Establishments engaged in printing, publishing, bookbinding and the allied graphic arts also consume large quantities of these materials but under the standard industrial classification adopted by the Dominion Bureau of Statistics in 1948 they are grouped separately.

---

* Furniture; sash, door and planing mills; veneer and plywood; hardwood flooring; boxes, baskets and crates; wood-turning; coffins and caskets; cooperage; woodenware; lasts, trees and wooden shoefindings; beekeepers' and poultrymen's supplies; excelsior; and other wood-using industries.

† Paper boxes and paper bags; roofing paper; and miscellaneous paper goods.

Some paper-using establishments purchase paper as a raw material from the pulp and paper industry and merely subject it to some form of treatment to fit it for further manufacture in some other industry. This occurs in the manufacture of coated, sensitized or corrugated paper. Other firms purchase paper and subject it to some treatment to fit it for a definite final use such as in the manufacture of asphalt roofing or waxed wrapping paper. Another large group uses paper and paperboard as a raw material for conversion into paper bags, boxes, envelopes, laminated wallboard and other commodities.

The manufacture of containers and packages of various kinds has grown very rapidly since ways have been found of converting tough and cheap paper stocks into strongly made boxes which are replacing wooden crates and packing cases. Small attractive paper containers for use in the retail trade are now in common use and their manufacture constitutes an important branch of the paper-using industries.

Composition roofing and sheathing, consisting of paper felt saturated with asphalt or tar and in some cases coated with a mineral surfacing, is being increasingly used as a substitute for metal roofing, wooden shingles and siding materials. Wood-fibre building boards, some of which are produced by lamination in the paper-using industries, are now used extensively in construction, especially for insulating purposes, replacing lumber and wood lath.

The growth of the paper-using industries in Canada since 1923 reflects these developments. In 1923 the 152 establishments in this group employed 6,870 persons, distributed $7,442,102 in salaries and wages and produced goods valued at $31,760,948. In 1959 these industries comprised 432 plants, provided employment for 29,203 persons whose earnings totalled $108,053,202, and produced products worth $527,713,524.

Subsection 7.—Printing, Publishing and Allied Industries

The printing trades group is made up of five closely related industries: printing and publishing, comprised of publishers who operate printing plants; printing and bookbinding, including general or commercial printers and bookbinders; lithographing, comprised of plants specializing in that process; engraving, stereotyping and electrotyping, including photo-engraving; and trade composition or typesetting for printers. A sixth industry covering publishers of periodicals who do not print their own publications has been included since 1949. Although strictly speaking these publishers are not manufacturers, they are closely related to the printing trades which produce the plates, cuts, etc., and print newspapers, magazines, directories, yearbooks, almanacs, house organs and other periodicals for them.

In 1959 the manufacturing printing trades employed 67,770 persons whose earnings totalled $289,302,847. Their output was valued at $740,015,907 and the raw materials used and services received cost $231,078,138.

Periodicals valued at $302,533,784 accounted for 40.9 p.c. of the value of printed matter and other products, daily newspapers alone contributing $225,445,967. The value of periodicals is made up of $223,088,250 received from advertising and $79,445,534 received from subscriptions and sales of publications. In addition, the 1,462 publishers in the sixth industry reported revenues of $59,864,886 from advertising and $14,758,203 from sales of publications.

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—Canada's Mineral Industry 1959-60*

The value of production of the Canadian mineral industry reached a record high of $2,476,240,506 in 1960, about 2.8 p.c. above the previous record of $2,409,020,511 established in 1959. Each segment of the industry—metallics, industrial minerals and fuels—registered a gain over the previous year. Among the individual mineral commodities, copper, nickel and zinc of the metallics; asbestos, sulphur and titanium dioxide of the industrial minerals; and natural gas of the fuels all registered significant advances in value of output. Appreciable decreases in value of production of iron ore and uranium of the metallics group and of some of the structural materials in the industrial minerals sector almost counterbalanced production gains of other mineral commodities.

The production value of metallic minerals in 1960 was $1,403,987,738 ($1,370,648,535 in 1959), accounting for nearly 57 p.c. of the total value of Canada's mineral output; that of industrial minerals (non-metallics and structural materials) was $509,817,905 ($502,794,153 in 1959); and that of the fuels sector was $562,434,863 ($535,577,823 in 1959). Non-metallic mineral production in 1960 was valued at $194,860,357, up 9 p.c. from $178,216,641 in 1959, and that of structural materials was $314,957,548, down 3 p.c. from $324,577,512 in the previous year. The relative production values of metallics, industrial minerals and fuels have not changed appreciably in the past decade, during which time the total has risen from $1,045,450,073 in 1950 to $1,795,310,796 in 1955 and to $2,476,240,506 in 1960.

---

* Prepared under the direction of Dr. Marc Boyer, Deputy Minister of Mines and Technical Surveys, Ottawa, in the following Divisions: Introduction and Subsections 1 and 3 by the Mineral Resources Division; Subsection 2 by the Mineral Processing Division, Mines Branch; and Subsection 4 by the Fuels and Mining Practice Division, Mines Branch.

Nickel, copper, uranium, iron ore, gold, zinc, lead and silver, in that order, were the leading metallic minerals in output value in 1960 and accounted for about 96 p.c. of the total value of the metallics output. Nickel developments, both domestic and foreign, presage an even more dominant position for Canadian nickel in the years ahead than the 70 p.c. of the Free World's total supply that has been contributed in recent years. Developments at Thompson in northern Manitoba will make that area, with its production capacity of 75,000,000 lb. a year, second in the world only to the Sudbury area with an annual capacity of 375,000,000 lb. Copper output was at an all-time high despite apparent over-supply in world markets which resulted in price declines in the last quarter of 1960. The market outlook at the year-end was uncertain because of abundant world supply and lower prices. Uranium production declined to 25,034,889 lb. of uranium oxide (U_3O_8) from the record output of 31,784,189 lb. in 1959. Canadian producers instituted a 'stretch-out' program for uranium in 1960 to allow some mines to remain in production until the end of 1966 to fill existing purchase contracts with the United States Atomic Energy Commission (USAEC). This action resulted from the announcement of Nov. 6, 1959 that the USAEC would not exercise its option to purchase Canadian uranium after Mar. 31, 1962.

Iron ore shipments to the United States decreased in the latter half of 1960 as a result of much-reduced steel operating rates in that country, so that total shipments in 1960 declined to 21,507,783 tons from the record high of 24,488,325 tons set the previous year. Shipments to the United Kingdom and Western Europe increased in both tonnage and value over those of 1959. Gold production increased slightly and, with a return to near-parity of the Canadian dollar in relation to the United States dollar at the end of 1960, the outlook for gold producers became more encouraging than it had been for many years. The Federal Government, in 1960, extended the Emergency Gold Mining Assistance Act three years to the end of 1963. The import quotas on unmanufactured lead and zinc, imposed by the United States Government on Sept. 22, 1958, continued throughout 1960. Despite the United States import restrictions and general world over-supply, Canadian production of both lead and zinc showed modest increases in 1960 over the previous year.

In the industrial minerals field, asbestos shipments increased to 1,140,538 tons valued at $118,700,998, about 10 p.c. above the previous year's record output. It appears that Russian asbestos production capacity now is about equal to Canada's. About 90 p.c. of Canadian production comes from 13 mines in the Eastern Townships of Quebec, the remainder from a mine at Matheson, Ont., and one at Cassiar, B.C. Canada is becoming a major producer of sulphur through the production of natural gas in Western Canada and now ranks fourth in the Free World production of sulphur in all forms, with total output in 1960 of about 1,000,000 tons. The value of titanium dioxide slag shipped from the electric smelter at Sorel, Que., reached a record $14,257,292, up from $8,507,149 in 1959. In addition, remelt iron valued at nearly $11,000,000 was recovered from the smelting of ilmenite at the Sorel smelter. The production of structural materials used in all types of construction was only slightly below the all-time record attained in 1959 and reflected a slight decline in building activity during 1960.

Since 1953, crude petroleum has been the largest single contributor to Canada's mineral output. Production in 1960, at 192,308,250 bbl. valued at $432,495,700, was only slightly above the 184,778,497 bbl. valued at $422,092,535 produced the previous year. Alberta continued to contribute about 70 p.c. of the total supply and Saskatchewan over 25 p.c. Natural gas production registered a 20.9-p.c. increase over that of 1959 to 504,452,000 Mcf. valued at $48,027,110. About 73 p.c. came from Alberta and most of the remainder from British Columbia, Saskatchewan and Ontario. Significant gas discoveries continued to be made in northeastern British Columbia and known gas fields in Alberta and Saskatchewan were extended. Coal output in 1960 increased slightly to 11,226,420 tons valued at $76,059,631 and reversed the trend of decreased shipments that had prevailed for many years. The average annual rate of decline in coal production since 1950 has been 10 p.c. because of increased use of petroleum products and natural gas for industrial and domestic purposes.

From a mineral resource and supply point of view, Canada gives every indication of becoming increasingly important. Canada has already attained a prominent, and sometimes dominant, position in world production of a large number of mineral commodities and now leads the Free World in the production of nickel, asbestos, platinum and platinum metals. It is second in uranium, zinc, aluminum, gold and cadmium; third in silver, iron ore, gypsum and barite; and stands high among world producers of copper, lead, titanium, cobalt, molybdenum, magnesium and several other commodities.

There is no scarcity of mineral raw materials in the world today but rather, in many instances, there is over-supply, particularly of iron ore, crude petroleum, copper, uranium, lead, zinc and sulphur. The greatest problem facing Canada's mineral industry in the years ahead will be that of competing on an economic basis with mineral industries of other countries, particularly those of South America and Africa, in supplying mineral requirements of the industrial economies of the United States, the United Kingdom, Western Europe and Japan. Increased efficiency at all levels of operation leading to lower costs of production, the diligent search for new markets, and close co-operation between government and industry give much promise for continuing enlargement and diversification of the Canadian mineral economy and a greater role for the mineral industry in Canada's over-all economy.

Subsection 1.—Metals*

Nickel.—Canada has long been the leading world producer of nickel and in 1960 accounted for about 70 p.c. of the Free World production capacity. Other major producers are New Caledonia, Japan and the United States. Cuba has two nickel processing plants both of which were nationalized in 1960 through expropriation by the Cuban Government resulting in a loss to the Free World market of an annual production capacity of 52,000 tons of nickel. No shortage of nickel resulted from the expropriations. The commencement of electrolytic nickel production at the Thompson property in northern Manitoba early in 1961 will maintain a balanced production, supply and demand pattern.

Nickel production in Canada during 1960 reached an all-time high of 213,641 tons valued at $312,738,234 and regained first place from uranium in the value of metallic mineral output. World demand during 1960 was extremely heavy though demand declined in the United States toward the end of the year. Nickel requirements in Western Europe continued strong all year, as steel operations remained at a high level.

The Canadian nickel industry is dominated by the mining and smelting operations of the Sudbury district of Ontario where The International Nickel Company of Canada, Limited and Falconbridge Nickel Mines Limited have mines and primary processing plants. International Nickel operates five mines: the Creighton, Frood-Stobie, Garson, Levack and Murray. It has smelters at Copper Cliff and Coniston, with the main product being nickel oxide sinter; by-product production includes copper, cobalt, the platinum metals, gold, silver, selenium, iron ore pellets and sulphur. Some sinter is used direct by industry and some is shipped to the Port Colborne, Ont., refinery where it is reduced, cast into anodes and electrolytically refined. Sinter is also shipped to the company's Mond Nickel refinery in the United Kingdom for reduction to metal by the carbonyl process. Rated 1960 production capacity of International Nickel was 165,000 tons of refined nickel. Falconbridge Nickel Mines Limited obtains ore from its Falconbridge, East and McKim mines in the Falconbridge area, and from the Hardy, Longvack and Fecunis mines in the Onaping area, all near Sudbury. Concentrates are smelted at Falconbridge to produce nickel-copper matte which is shipped to the company's refinery at Kristiansand, Norway. Current annual production capacity of Falconbridge is about 32,500 tons of electrolytic nickel.

Sherritt Gordon Mines Limited has mines at Lynn Lake in northern Manitoba and a refinery at Fort Saskatchewan, Alta. The refinery employs a pressurized ammonia leach process for recovery of nickel and cobalt from Lynn Lake concentrates. It also treats custom ore concentrates shipped from the mine of North Rankin Nickel Mines Limited at Rankin Inlet on the west shore of Hudson Bay. Giant Nickel Mines Limited, whose mine is near Hope, B.C., commenced shipments of nickel concentrates to Japan in 1960.

---

* The figures for 1959 in this Subsection are final but those for 1960, as well as some pertaining to individual companies in both years, are subject to revision.

International Nickel's Thompson project in northern Manitoba, with an annual production capacity of 37,500 tons, began producing electrolytic nickel in February 1961. The Thompson operation includes mine, concentrator, smelter and an electrolytic refinery utilizing artificial nickel sulphide anodes. Company properties under development in the Sudbury area are the Crean Hill, Clarabelle open pit and the Copper Cliff North. The company has a $5,000,000 fluid-roast plant under construction at Copper Cliff. It also announced late in 1960 a further $50,000,000 program to triple the capacity of its iron recovery plant. Feed for this plant is pyrrhotite tailings from which the nickel is first removed by an atmospheric ammonia leach.

Falconbridge Nickel, in the Sudbury area, has commenced a $25,000,000 program which will include $5,000,000 for a 100,000-ton-a-year iron recovery plant; $10,000,000 to $15,000,000 for a shaft and development program at the large Strathcona deposit, and $7,500,000 to $10,000,000 for plant expansion and refinement designed primarily to improve efficiency of operation.

Official ore reserves in the Sudbury area in 1959 were 264,864,000 tons for International Nickel and 46,182,450 tons for Falconbridge Nickel. These reserves, with those of northern Manitoba, assure the Free World of sufficient nickel for many years.

Copper.—Canada's copper mining industry continued to expand in 1960. Production reached a record high of 438,383 tons valued at $264,336,899, exceeding the 1959 output by 43,114 tons and $31,234,086. The increase in production was attributable to new mine capacity, increased capacity at some existing mines and increased production from the nickel-copper mines of the Sudbury district of Ontario as a result of a strong world-wide demand for nickel.

Six smelters for the reduction of copper and copper-nickel ores and concentrates are operated in Canada. In the Sudbury area, The International Nickel Company of Canada, Limited operates smelters at Copper Cliff and Coniston, and Falconbridge Nickel Mines Limited produces copper-nickel matte at its Falconbridge smelter. Hudson Bay Mining and Smelting Company Limited at Flin Flon, Man., smelts concentrates from its mines in Manitoba and Saskatchewan and, since September 1960, smelts concentrates from the Lynn Lake, Man., mine of Sherritt Gordon Mines Limited. Ores and concentrates from the copper mines in Ontario, Quebec and Newfoundland are smelted at the Noranda smelter of Noranda Mines Limited and the Murdochville smelter of Gaspe Copper Mines Limited, both in Quebec. Copper refineries are operated by International Nickel at Copper Cliff and Canadian Copper Refiners Limited at Montreal East, Que. The capacity of the Canadian Copper Refiners' plant was increased to 236,000 tons of copper a year in 1960 and the combined production of the two refineries totalled 414,000 tons at the end of the year.

In Newfoundland, the Tilt Cove mine of Maritimes Mining Corporation Limited and the Buchans Unit of American Smelting and Refining shipped concentrates containing 13,875 tons of copper in 1960. Exploration parties were active at several of the old copper properties on the Burlington peninsula and Atlantic Coast Copper Corporation Limited started construction of a 1,000-ton-a-day mill at Little Bay. Production from the latter property started in early 1961.

Although no copper production from New Brunswick was recorded in 1960, underground development was started at the Wedge property and was resumed at the Heath Steele mine. The Consolidated Mining and Smelting Company of Canada Limited constructed a mining plant and started shaft sinking and underground development of the Wedge property 36 miles southwest of Bathurst. Heath Steele Mines Limited unwatered its mine north of Newcastle and resumed underground development and exploration of the orebodies.

Copper production in Quebec was 24,600 tons higher than in 1959, reaching a record 159,512 tons valued at $96,632,633. Operations were normal at the mines in the Noranda-Normetal-Val d'Or region and exploration in this area was stimulated by new discoveries near the Waite Amulet mine and in Joutel township north of Amos. The Chibougamau area in northwestern Quebec continued to increase in importance with one new producer in 1960 and development ore obtained from two large potential producers. Mill capacity was increased at the Chapais mine of Opemiska Mines (Quebec) Limited and the Merrill Island mine of Campbell Chibougamau Mines Limited. Copper Rand Chibougamau Mines Limited became the area's newest producer in January 1960 when the first ore was processed in its 1,500-ton-a-day mill. Gaspe Copper Mines Limited at Murdochville continued production at 6,500 tons of ore a day but copper output decreased because of lower grade mill feed. Exploration and diamond drilling were continued at several properties near Mattagami Lake in northwestern Quebec, stimulated by the Federal Government announcement that a railroad would be built into the area.

Higher production from the nickel-copper mines in the Sudbury district accounted for most of the 15,849-ton increase in Ontario's copper output in 1960, which amounted to 204,121 tons valued at $122,468,767. International Nickel and Falconbridge Nickel pursued active development programs on their properties in the Sudbury area. In the Manitouwadge district, Geco Mines Limited and Willroy Mines Limited maintained steady production from their copper-zinc mines and continued extensive programs of "on property" exploration and development. Temagami Mining Company Limited continued exploration, development and production at its mine near Temagami. After an extensive exploration program, Kam Kotia Porcupine Mines Limited started construction of an 800-ton-a-day mill at its mine in the Kamiskotia area, near Timmins.

Copper production in Manitoba and Saskatchewan declined to 44,300 tons in 1960 from the 48,481 tons in 1959. Hudson Bay Mining and Smelting operated the Flin Flon, Coronation, Birch Lake, Schist Lake and Chisel Lake mines. Ore reserves at Birch Lake were exhausted and the mine was closed in April. The Chisel Lake mine near Snow Lake, Man., started production in September at 1,400 tons a day. Hudson Bay is developing another mine and exploring two more properties in the Snow Lake district. Sherritt Gordon shipped copper concentrates from its Lynn Lake nickel-copper mine to the Noranda smelter until the middle of September, after which the concentrates were shipped to the Flin Flon smelter under a new treatment contract.

British Columbia's 1960 copper production was 96 p.c. above that of 1959, amounting to 15,950 tons valued at $9,614,454. The increase was the result of a full year's production from the Greenwood mines of Phoenix Copper Company Limited and Consolidated Woodgreen Mines Limited, which operated at 1,000 tons and 650 tons a day, respectively. The Britannia mine of Howe Sound Company at Britannia Beach operated at about 1,200 tons a day. On Vancouver Island, Cowichan Copper Company Limited at Lake Cowichan operated a 500-ton-a-day mill treating ore from the Blue Grouse and Sunnyside orebodies. Concentrates from Cowichan Copper are shipped to Japan. The other copper producers in British Columbia ship their concentrates to the Tacoma, Wash., smelter of American Smelting and Refining Company. Exploration and development of properties continued during 1960. In the Highland Valley area, Craigmont Mines Limited started construction of a 4,000-ton-a-day mill and Japanese interests examined the feasibility of putting the property of Bethlehem Copper Corporation Limited into production. The Consolidated Mining and Smelting Company of Canada Limited announced plans to start development of the old Coast Copper property near Alice Lake on northern Vancouver Island.

The 625 tons of copper produced in the Northwest Territories came from the Rankin Inlet nickel-copper mine of North Rankin Nickel Mines Limited on the west coast of Hudson Bay.

Uranium.—Production of uranium oxide (U_3O_8) in 1960 amounted to a total of 12,518 tons valued at $262,935,404 compared with 15,892 tons valued at $331,143,043 in 1959. Decreased production was the result of the closing of ten mines after the United States Atomic Energy Commission, the principal outlet for Canadian uranium, announced it would not continue to purchase uranium from Canada in excess of commitments that were to expire in 1962 and 1963. At the time of the announcement, arrangements were also made to allow Canadian producers to 'stretch-out' to the end of 1966 the undelivered portion of uranium under the original sales contracts. The transfer of contracts from one company to another was also permitted. The stretch-out plan was designed to prevent the closing of all mines from Mar. 31, 1962 to Mar. 31, 1963. By the end of 1960, the industry was sufficiently re-oriented to permit the larger, low-cost producers to continue production beyond 1963, with a few expected to operate into 1966.

At the end of 1960, there were only ten mines in operation compared with 20 a year earlier. Some mines could not have fulfilled their contracts in any event owing to insufficient ore reserves or high operating costs, or both; some also had large capital overruns which made it difficult to repay their debt obligations. For these mines especially, the provisions of the stretch-out plan were of great assistance. Plans for future production call for a reduction year by year over the next six years so that in 1966 contract deliveries will be reduced to 1,100 tons. Mine employees declined from 11,792 at the beginning of 1960 to about 6,000 at the end of the year; 4,000 of these were employed in the Elliot Lake district of Ontario and 1,000 each in the uranium mining areas of Bancroft, Ont., and Beaverlodge Lake, Sask.

Although Canadian uranium producers are allowed to sell any amount of surplus uranium to countries that hold bilateral agreements with Canada for co-operation in the peaceful uses of atomic energy, there have been very few sales of this nature. Apart from the special contract agreements for the sale of uranium to the United States and the United Kingdom, Canada holds bilateral agreements with Switzerland, Japan, Pakistan, Australia, and Euratom (which comprises six European nations). For other countries, a Canadian producer may, subject to government approval, sell up to 2,500 lb. of uranium but when this limit is reached for a given country further shipments from Canada are not permitted.

Ontario's output of 9,883 tons of uranium oxide (U_3O_8) in 1960 was 79 p.c. of the Canadian total. In the Elliot Lake camp, which is the largest uranium mining camp in the world, ten mines were in operation at the beginning of 1960 but by the end of the year five had closed as a result of consolidations that had taken place. The mines that closed were the Pronto, Quirke and Lacnor mines of Rio Algom Mines Limited, Can-Met Explorations Limited, and Stanleigh Uranium Mining Corporation Limited. The mines that remained in production were Denison Mines Limited, Stanrock Uranium Mines Limited, and three mines operated by Rio Algom Mines Limited—Milliken, Nordic and Panel. Ore reserves in the Elliot Lake camp are estimated at 298,000,000 tons grading 0.12 p.c. U_3O_8.

In the Bancroft area there were only two mines in operation at the end of 1960—Bicroft Uranium Mines Limited and Faraday Uranium Mines Limited. Each mine operated throughout the year at an average rate of about 1,200 tons of ore a day. A third producer, Canadian Dyno Mines Limited, made arrangements with Gunnar Mines Limited early in the year, allowing Gunnar to fulfil the remainder of Dyno's contract. The Dyno mine was closed in June. Ore reserves in the Bancroft camp are estimated at 4,000,000 tons grading 0.1 p.c. U_3O_8.

The Beaverlodge Lake area in northwestern Saskatchewan produced 2,307 tons of uranium concentrates (U_3O_8) during 1960, a slight decrease from the previous year. The principal producers were Eldorado Mining and Refining Limited and Gunnar Mines Limited, both of which continued production throughout the year. In March, Lorado Uranium Mines Limited sold its contract to Eldorado and the Lorado mine and custom mill were closed. This move necessitated the closing of Lorado's custom shippers—Lake Cinch Mines Limited, Cayzor Athabaska Mines Limited, Rix-Athabasca Mines Limited—and several other smaller shippers. Total ore reserves in the Beaverlodge camp are estimated at 6,000,000 tons grading 0.20 p.c. U_3O_8.

Uranium production in the Northwest Territories ceased in September when the reserves at Eldorado's Port Radium deposit were mined out. Production was 327 tons of U_3O_8 in 1960.

The measured, indicated and inferred uranium reserves in Canada as of Jan. 1, 1960, were estimated at 308,500,000 tons grading 0.12 p.c. U_3O_8. This is equivalent to 370,200 tons of uranium oxide (U_3O_8), the largest reserve of uranium in the world.

Iron Ore.—Shipments of iron ore by Canadian producers in 1960 decreased sharply from the all-time high set in 1959 to 21,507,783 tons, a drop of 12 p.c.; the value declined from $192,666,101 to $171,670,605. Shipments from producers in British Columbia and Newfoundland were higher and the unit value of ore shipped from all producing provinces except Newfoundland was also higher.

Imports from the United States Lake Superior district for use in Ontario blast furnaces increased. Rather than reflecting a growing trend, the 1960 level of imports represented a return to more normal conditions after the general recession of 1958 and the strike in the United States steel industry and iron mines in 1959. A larger portion of the output from Canadian iron ore mines had been consumed domestically in 1959 to offset the effects of the strike and to enable Ontario blast furnaces to operate at a high rate.

Canada's principal iron ore market is the United States, followed in order by the United Kingdom, Western Europe and Japan. Early in the year, most United States steel and iron ore executives predicted a near-record steel production of 120,000,000 tons for 1960. Correspondingly, Canadian iron ore exports to the United States were at a high level during the first six months but United States steel production commenced an unexpected decline in April that levelled out in July to from 50 to 55 p.c. of capacity, where it remained the balance of the year. Stocks of iron ore at blast furnace sites increased steadily and resulted in a sharp cutback in ore receipts during the last four months. As a consequence, Canadian iron ore production and exports to the United States declined. In contrast, steel production and iron ore consumption in the United Kingdom, Western Europe and Japan remained at a high level throughout most of 1960 and Canada's iron ore exports to these areas increased.

Canada's relative iron ore market position declined in varying degrees with respect to ore imported by the major iron ore consuming nations, particularly the United States. Continuing and increasing competition is being experienced from a number of countries of South America and Africa. Because of this competition, product research on direct-shipping ores and the development of properties for the production of high-grade concentrates and agglomerates are becoming increasingly important features of the Canadian iron ore industry.

Iron Ore Company of Canada, with direct shipping ore deposits astride the Labrador-Quebec border, 360 miles north of the port of Sept Îles, Que., is the largest iron ore producer in Canada, accounting for about 51 p.c. of 1960 shipments. Wabana Mines Limited, wholly owned subsidiary of Dominion Steel and Coal Corporation, Limited, produces heavy media concentrate from its Bell Island, Nfld., operations and accounted for about 14 p.c. of the year's shipments. Nearly 4 p.c. of 1960 shipments was in the form of pelletized iron ore concentrate from the Hilton Mines near Shawville, Que.

In Ontario, Caland Ore Company Limited, Canadian Charleson Limited and Steep Rock Iron Mines Limited operate mines near Atikokan, 140 miles west of Port Arthur. Caland, a new producer in 1960, mined direct-shipping ore and accounted for approximately 4 p.c. of Canada's 1960 shipments. Canadian Charleson produces small amounts of concentrate from hematite-bearing gravels. Steep Rock, the oldest producer in the area, produced direct-shipping ore and concentrates to account for over 8 p.c. of the nation's shipments. In the Michipicoten area, Algoma Ore Properties Division of Algoma Steel Corporation, Limited operates mines and a sinter plant at Wawa and accounted for 9 p.c. of the 1960 shipments. Marmoraton Mining Company Limited produces pelletized iron ore concentrates at its plant near Marmora, and Lowphos Ore Limited produces iron ore concentrate at its plant near Capreol. Together these companies accounted for nearly 5 p.c. of the country's shipments.

Shipments by the three British Columbia producers exceeded 1,000,000 tons, an all-time high, and accounted for over 5 p.c. of total Canadian shipments in 1960. Empire Development Company Limited and Nimpkish Iron Mines Limited operate mines in the northern part of Vancouver Island and Texada Mines Limited produces from mines on Texada Island.

Three companies produce iron by-products from processing materials other than iron ores. Two of these—The International Nickel Company of Canada, Limited at Copper Cliff, Ont., and Noranda Mines Limited at Cutler, Ont.—treat iron sulphides and produce high-grade iron oxide agglomerates. In 1960, International Nickel announced plans to triple its iron output capacity to 900,000 tons by 1963. Quebec Iron and Titanium Corporation treats ilmenite at its Sorel, Que., electric smelter to produce titania slag and pig iron. The ilmenite is mined from deposits near Allard Lake.

Despite the increasing competition for the world's iron ore markets, the rapid increase in Canadian iron ore production during the past decade is expected to continue. Properties being developed for production will result in an increase of Canada's iron ore production capacity to over 40,000,000 tons by 1965. The development of three properties in Labrador-Quebec for production in the next five years is of particular importance, although there is considerable exploration and development work continuing on several iron ore properties throughout Canada. In the Wabush Lake area of Labrador, 190 miles north of Sept Îles, Iron Ore Company of Canada and Wabush Iron Company Limited are developing large iron deposits for production. The former company will spend over $150,000,000 on a mine and concentrator with a production capacity of 7,000,000 tons of concentrate a year by 1962, and the latter company will probably spend over $100,000,000 on similar facilities with production capacity of 4,000,000 to 5,000,000 tons of concentrate a year by 1965. Quebec Cartier Mining Company has spent nearly $200,000,000 on its Lac Jeannine project near the town of Gagnon, about 145 miles north of Shelter Bay on the St. Lawrence River. Construction of a deep-water harbour at Port Cartier near Shelter Bay, a 193-mile railway, a 60,000-hp. hydro-electric development and a beneficiation plant with capacity to produce 8,000,000 tons of concentrate a year were all started late in 1958. Initial production is scheduled for early 1961. In British Columbia, three new producers plan to start shipments in 1961 and 1962 at a combined rate of approximately 1,300,000 tons a year. In January 1961, the Consolidated Mining and Smelting Company of Canada Limited commenced production of electric furnace pig iron at Kimberley. Raw material for this 36,500-ton-a-year facility is iron oxide calcine, previously a waste product from the company's sulphuric acid plant.

Gold.—Conditions in Canada's gold mining industry in 1960 were more favourable than in 1959. The average Mint price for gold increased to $33.93 an oz.t. (based on Dominion Bureau of Statistics preliminary estimates) from $33.57 in 1959. Production rose to 4,602,762 oz.t. from 4,483,416 oz.t. and the value increased to $156,171,715 from $150,508,275. There was a sharp rise in the gold price on international markets late in 1960 which resulted in increased earnings for gold mines selling on the open market. The higher Mint price resulted from the Canadian dollar moving closer to parity with the United States dollar in the latter part of the year.

The 25-p.c. increase in cost assistance granted to lower-grade gold mines by an amendment to the Emergency Gold Mining Assistance Act in 1959, together with an extension of these benefits to the end of 1963, provided stability to higher-cost mines and aided in offsetting increased operating costs. New union agreements at most mines increased labour costs. Material and power costs were also higher in many mining areas. A total of 54 lode gold mines operated during 1960, of which 42 received cost assistance under the terms of the Emergency Gold Mining Assistance Act. The others were not eligible because their operating costs were less than $26.50 an oz.t. of gold produced. Many of these low-cost mines sold all or part of their gold production on the open market. Three lode gold mines closed during the year and two new mines started operations.

In 1960, 85.5 p.c. of Canada's gold production came from lode gold mines, 13.0 p.c. was by-product output from base-metal mines and 1.5 p.c. came from placer gold deposits. Gold occupied sixth place in value among minerals produced in Canada, following crude petroleum, nickel, copper, uranium oxide and iron ore. Canada remained the second largest gold-producing country in the Free World, following the Union of South Africa. The outlook for gold mining in Canada was brighter than it had been for many years. Gold was selling at approximately $35.60 oz.t. in the London international gold market at the end of 1960 and the Canadian dollar was close to parity with the United States dollar; a high of $34.82 oz.t. was reached in the last week of 1960.

Ontario was the main producer, accounting for 59.0 p.c. of the 1960 total output. An estimated 2,725,077 oz.t. were produced compared with 2,683,449 oz.t. in 1959, only the Porcupine and Kirkland Lake districts showing declines in output. Thirty-one lode gold mines operated in the province during 1960, 13 of them in the Porcupine district where the chief producers were Hollinger Consolidated Gold Mines, Limited (Canada's second-largest gold producer), McIntyre Porcupine Mines Limited, Dome Mines Limited and Aunor Gold Mines Limited. In the Larder Lake district only one lode gold mine operated but this was Canada's largest gold producer, Kerr-Addison Gold Mines Limited, whose production reached an all-time high of nearly 700,000 oz.t. In the Patricia district, seven mines were operated, with a new mine, H. G. Young Mines Limited, starting production in August. The principal producers in the district were Campbell Red Lake Mines Limited, Madsen Red Lake Gold Mines Limited and Dickenson Mines Limited. In the Kirkland Lake district, seven mines recorded production but Kirkland Minerals Corporation Limited closed its mine in September. The main producers were Macassa Mines Limited, Wright-Hargreaves Mines, Limited and Lake Shore Mines Limited. In the Port Arthur mining division, MacLeod-Cockshutt Gold Mines, Limited and Leitch Gold Mines Limited continued to operate. Renabie Mines Limited continued to operate in the Sudbury mining division. Some 50,000 oz.t. of gold were recovered as a by-product from base-metal mines in the province, most of it coming from the copper-nickel mines of the Sudbury district.

Quebec produced 22.5 p.c. of Canada's gold production, with 13 lode gold mines operating during 1960; production totalled 1,033,249 oz.t. compared with 999,388 oz.t. in 1959. Nearly 40 p.c. of the gold was recovered as a by-product in smelting base-metal ores from the Horne mine of Noranda Mines Limited and other Quebec mines that ship concentrates to the Noranda smelter. Anacon Lead Mines Limited (Chibougamau operation), classed as a lode gold mine, was closed in August and a new mine, Akasaba Gold Mines Limited, started shipments to the Bevcon Mines Limited mill on Mar. 1. The largest lode gold producers were Lamaque Mining Company Limited and Sigma Mines (Quebec) Limited at Bourlamaque, and East Malartic Mines Limited and Malartic Gold Fields Limited in the Malartic area.

The Northwest Territories produced 9 p.c. of the gold recovered in Canada. All production came from lode gold mines in the Yellowknife area and totalled 411,492 oz.t. compared with 405,922 oz.t. in 1959. Four mines operated, with Giant Yellowknife Mines Limited and Consolidated Discovery Yellowknife Mines Limited being the main producers. Giant is now Canada's third largest gold producer. Taurcanis Mines Limited continued development of a gold prospect some 100 air miles northeast of Yellowknife.

British Columbia produced approximately 4.5 p.c. of Canada's gold output, nearly 90 p.c. of it from lode gold mines and the remainder from base-metal and placer operations. Four lode gold mines operated; Bralorne Pioneer Mines Limited, the only large producer, operated two mines in the Bridge River area—the Pioneer division mine which was closed in October 1960 and the Bralorne division mine which increased its gold output. The

Cariboo Gold Quartz Mining Company Limited operated in the Wells area and French Mines Limited in the Hedley area. Placer gold production was lower but some small operations worked in the Wells and Atlin areas.

In the Prairie Provinces, Manitoba recovered 51,352 oz.t. compared with 51,186 oz t. in 1959. Approximately 57 p.c. of the production came from San Antonio Gold Mines Limited and Forty-Four Mines Limited and the remainder as a by-product from smelting base-metal ores of the Flin Flon area and Lynn Lake. Saskatchewan recovered 87,288 oz.t. compared with 78,588 oz.t. in 1959, with all gold production coming from base-metal mines near Flin Flon on the Manitoba–Saskatchewan border. A small amount of placer gold was recovered from the North Saskatchewan River near Edmonton, Alta. In the Yukon Territory, all gold production came from placer operations. The total recovered was 77,770 oz.t. compared with 66,960 oz.t. in 1959. The number of placer operations increased but about 70 p.c. of the gold recovered came from the dredging operations of The Yukon Consolidated Gold Corporation Limited in the Dawson area.

In the Maritime Provinces, the only gold production reported was a few ounces recovered from an old lode gold mine in Nova Scotia. In Newfoundland, 13,479 oz.t. were recovered as a by-product from the base-metal operations of Buchans Mining Company Limited at Buchans and Maritimes Mining Corporation Limited at Tilt Cove. This output compared with 13,411 oz.t. in 1959.

Lead and Zinc.—Production of lead in Canada during 1960 is estimated at 189,267 tons having a value of $40,427,281, compared with 186,696 tons in 1959 valued at $39,616,835. Production increases totalling 5,838 tons were recorded in British Columbia, Manitoba and Newfoundland, and decreases totalling 3,267 tons were recorded in Ontario, Quebec and the Yukon. The price of lead in 1960 was 10.75 cents a pound until Apr. 12 when it increased to 11 cents. Subsequently, it dropped in two stages to a year-end price of 10 cents a pound. The average for the year was 10.73 cents compared with 10.57 cents for 1959.

Exports of lead concentrates were somewhat lower in 1960 than in 1959. Concentrates totalling 51,335 tons were shipped to the United States (26,895 tons), West Germany (12,220 tons), Belgium (11,445 tons) and Japan (775 tons). The total for 1959 was 53,726 tons. On the other hand, refined lead exports amounted to 96,449 tons in 1960 as against 92,252 tons in 1959. They were distributed to the United Kingdom (54,032 tons), the United States (28,866 tons), Japan (10,379 tons) and other countries (3,172 tons).

During 1960, zinc prices changed six times. The price per pound of Prime Western grade zinc remained in the 12.50-to-13.00-cent-range to Dec. 20 when, following price declines in the United Kingdom and the United States, it dropped to 12.00 cents. Average prices per pound of Prime Western zinc in 1959 and 1960 were 11.65 cents and 12.75 cents, respectively. Mine output of zinc in 1960, estimated at 405,620 tons, was 2.4 p.c. higher than the 396,008 tons produced in 1959. The respective values in those years were $108,209,749 and $96,942,663.

Exports of zinc in 1960 amounted to 376,984 tons, 4.5 p.c. higher than in 1959. The principal importers of Canadian refined zinc were the United Kingdom (92,435 tons) and the United States (75,237 tons), India and Japan with other countries importing 39,419 tons. Most of the 1960 exports of zinc in concentrates—an amount of 137,375 tons—went to the United States, while Norway, the United Kingdom and Belgium together imported 21,152 tons in approximately equal amounts. Altogether, 21 countries imported zinc from Canada.

Preliminary figures show that domestic consumption of both lead and zinc decreased in 1960. Consumption of lead in 1960 was 44,450 tons compared with 49,414 tons in 1959; zinc consumption at 53,450 tons in 1960 was considerably lower than the 65,999 tons consumed in 1959. Close to 80 p.c. of Canada's lead production and 50 p.c. of the zinc production in 1959 and 1960 were produced in British Columbia; most of this production was obtained from the Sullivan mine at Kimberley, the Bluebell mine at Riondel and the H.B.

mine at Salmo, all of which are operated by The Consolidated Mining and Smelting Company of Canada Limited (COMINCO). Combined ore output of the three mines per working day was about 12,000 tons, of which approximately 9,600 came from the Sullivan mine. Concentrates from mines in British Columbia, Yukon Territory and some foreign areas were treated at the COMINCO smelter at Trail. Other important British Columbia producers of lead and/or zinc in 1959 and 1960 included Canadian Exploration Limited and Reeves MacDonald Mines Limited, both near Salmo; Sheep Creek Mines Limited, west of Invermere; and Howe Sound Company, Britannia Division, north of Vancouver. In the Yukon, the only important producer of lead and zinc was United Keno Hill Mines Limited whose production was from the Calumet, Hector and Elsa mines in the Mayo district.

In Manitoba and Saskatchewan, Hudson Bay Mining and Smelting Company Limited was the only producer of lead and zinc. Three of its mines—the large Flin Flon mine, the Schist Lake mine, and Coronation mine—are at or near Flin Flon. A fourth, the new Chisel Lake mine at Snow Lake, 70 miles east of Flin Flon, commenced production of zinc, lead and copper ore at 1,000 tons a day in the latter part of 1960. The Chisel Lake mine was the only producer of lead in the two provinces. All the ore from these four mines was concentrated in the company's 6,000-ton-a-day mill at Flin Flon. Zinc is recovered in the company's electrolytic refinery, which has an annual capacity of 73,000 tons of refined zinc.

In Ontario, zinc concentrate and a small amount of lead concentrate were produced by Geco Mines Limited and Willroy Mines Limited in the Manitouwadge district north of Lake Superior. Quebec's main source of zinc was copper-zinc ore from mines in the Noranda-Val d'Or area operated by Quemont Mining Corporation Limited, Manitou-Barvue Mines Limited, Normetal Mining Corporation Limited, Sullico Mines Limited and Waite Amulet Mines Limited. New Calumet Mines Limited, whose mine is 70 miles west of Ottawa, was Quebec's main lead producer. Manitou-Barvue also produced lead concentrates. The only lead-zinc producer in the Atlantic Provinces was at Buchans, Nfld., operated by American Smelting and Refining Company.

Exploration and development activities were for the most part confined to the Snow Lake area of Manitoba, the Noranda and Watson Lake (100 miles north of Senneterre) areas of Quebec and the Bathurst area of New Brunswick. At Snow Lake, Hudson Bay Mining and Smelting continued to develop its Stall Lake mine, a potential producer of copper-zinc ore. In the Noranda area, Consolidated Vauze Limited did extensive underground exploration and development on its copper-zinc property adjacent to Waite-Amulet Mines Limited. In mid-1960, Mattagami Mines Limited commenced shaft-sinking on its property in the Watson Lake area where it has outlined 23,000,000 tons of zinc-copper ore. Some exploration was done on lead-zinc properties in the Bathurst area by Brunswick Mining and Smelting Corporation Limited, Heath Steele Mines Limited, Kennco Explorations (Canada) Limited and the New Jersey Zinc Company.

Silver.—Canada's silver production in 1960 was 32,328,143 oz.t. valued at $28,726,788 compared with 31,923,969 oz.t. valued at $28,022,860 in 1959. A major increase in production of over 1,000,000 oz.t. was recorded in British Columbia and smaller increases were recorded in Manitoba, Quebec and the Northwest Territories; production from Ontario, Newfoundland, Saskatchewan and the Yukon Territory declined.

World production during 1959 declined an estimated 13,500,000 oz.t. from the 1959 production of 238,500,000 oz.t. Canada, with a 2-p.c. gain, was the only major silver producer to register increased output. The United States reported a decline of 9 p.c. in mine production of recoverable silver. As a result, Canada moved up to second place in world output, ahead of the United States and exceeded only by Mexico. Silver consumption in Canada in 1959 was 10,252,760 oz.t. compared with 9,299,809 oz.t. in 1958. Coinage requirements, at 5,737,347 oz.t. compared with 4,662,224 oz.t., more than accounted for the entire increase. Free World consumption of silver in 1959 was estimated at 297,000,000 oz.t., a gain of 18 p.c. over 1958.

Base-metal ores treated at domestic and foreign smelters are Canada's chief source of silver. Most of the silver from these ores is recovered by The Consolidated Mining and Smelting Company of Canada Limited in smelting lead-zinc ores at Trail, B.C. That company produced 9,367,029 oz.t. of refined silver in 1959, about 29 p.c. of total Canadian production. Important amounts were recovered from blister copper by Canadian Copper Refiners Limited at Montreal East, Que.; from silver-cobalt ores at the refinery of Deloro Smelting and Refining Company Limited, Deloro, Ont.; from nickel-copper ores treated at Copper Cliff, Ont., by The International Nickel Company of Canada, Limited; and from gold bullion refined at Timmins and Ottawa, Ont., by Hollinger Consolidated Gold Mines Limited and the Royal Canadian Mint, respectively. United Keno Hill Mines Limited, Canada's largest mine producer of silver, produced 7,248,800 oz.t. during the year ended Sept. 30, 1960, compared with 7,307,815 oz.t. in the previous fiscal year. Other leading primary producers were Highland-Bell Limited in British Columbia, Agnico Mines Limited and Langis Silver and Cobalt Mining Company Limited near Cobalt, Ont., McIntyre Porcupine Mines Limited and Siscoe Metals of Ontario Limited near Gowganda, Ont. These five companies together produced 6,668,396 oz.t. in 1959.

The average Canadian price of silver in 1960 was 88.86 cents an oz.t. compared with 87.78 cents in 1959.

Platinum Metals.—The platinum metals include the two triads of platinum-iridium-osmium and palladium-rhodium-ruthenium. All occur in the nickel-copper ores of the Sudbury district of Ontario, although osmium is not recovered. The amount present in the Sudbury ores averages about 0.02 oz.t. of platinum metals per ton of ore but this becomes appreciable when the large tonnages of ore treated are considered. Production in 1960 was 221,832 oz.t. of platinum valued at $18,134,766 and 238,489 oz.t. of palladium, rhodium, ruthenium and iridium valued at $9,538,921. The 1960 production was 40 p.c. greater than that of 1959 and was the second highest on record. Canadian producers of the platinum metals are Falconbridge Nickel Mines Limited and The International Nickel Company of Canada, Limited.

The Union of South Africa and the Union of Soviet Socialist Republics are other major producers but neither country has published production figures in recent years. Platinum metals production in South Africa comes from sulphide ore in the Merensky Reef horizon of the Bushveld Complex. Annual production capacity is rated at 625,000 oz.t. although this has not as yet been attained. Russian production comes from the old native platinum placers in the Ural mountains and as by-products from nickel-copper mines at Norilsk, Petsamo and Monchegorsk.

Major uses of the platinum metals are as catalysts in the chemical industry and as electrical contacts in the electrical industry. Minor uses are in jewellery and dental-medical equipment.

Cobalt.—Cobalt occurs in the copper-nickel ores of The International Nickel Company of Canada, Limited and Falconbridge Nickel Mines Limited in the Sudbury area of Ontario. International Nickel recovers cobalt from its nickel-refining operations at Port Colborne, Ont., and Clydach, Wales. Falconbridge recovers it in the refining of nickel-copper matte at its refinery at Kristiansand, Norway. Cobalt contained in the silver ores from the Cobalt and Gowganda areas of Ontario is recovered by Deloro Smelting and Refining Company Limited at its smelter at Deloro, Ont.; because of lack of feed, this smelter is expected to close early in 1961. Sherritt Gordon Mines Limited produces refined cobalt and nickel powders and briquettes in its refinery at Fort Saskatchewan, Alta., from nickel-copper concentrates shipped from its mine at Lynn Lake in northern Manitoba. No cobalt ore has been produced in Canada since 1957. In 1960, Canadian cobalt production amounted to 3,330,914 lb. valued at $5,669,560 compared with 3,150,027 lb. valued at $5,954,916 in 1959.

Columbium.—In 1960 St. Lawrence Columbium and Metals Corporation started construction of a mill at Oka, Que., 32 miles west of Montreal, for the production of columbium concentrate assaying from 50 to 55 p.c. Cb_2O_5. This will be the first commercial production of columbium concentrates in Canada. Two other companies—Quebec Columbium Mines Limited and Columbium Mining Products, Limited—have carried out extensive research and exploration programs in the same area. The main world source of columbium has been Nigeria, which produces about 60 p.c. of the world supply.

Molybdenum.—Molybdenite Corporation of Canada Limited continued to be the sole Canadian producer of molybdenite and molybdic oxide in 1960. Shipments during the year from the company's mine at Lacorne, Que., amounted to 758,507 lb. of contained molybdenum valued at $1,000,265, compared with 748,566 lb. valued at $940,596 in 1959. Preissac Molybdenite Mines Limited, in which Molybdenite Corporation holds a substantial interest, erected a headframe for a new three-compartment shaft, started sinking operations and brought hydro-electric power to its property during the year.

Titanium.—Ilmenite, an iron-titanium oxide, is mined in the Allard Lake and St. Urbain areas of Quebec. Ilmenite from St. Urbain is sold as heavy aggregate. Most of the Allard Lake ore is smelted at Sorel, Que., in electric furnaces by Quebec Iron and Titanium Corporation, to produce a high titania slag, most of which is exported to pigment producers in the United States, Japan and the United Kingdom. Some goes to a Canadian pigment manufacturer. In 1960, the value of titanium shipped as ore, heavy aggregate or titanium-bearing slag was $14,269,292. This was $5,632,578 above the 1959 value and represented an all-time high for Canadian production.

Selenium and Tellurium.—These metals are derived from the refining of blister copper by Canadian Copper Refiners Limited at Montreal East, Que., where the company operates one of the largest selenium and tellurium metal-and-salts plant in the world. International Nickel also produces selenium and tellurium at Copper Cliff, Ont. Selenium production in 1960 totalled 562,272 lb. valued at $3,487,804 compared with 368,107 lb. in 1959 valued at $2,576,749. Tellurium production in 1960 rose to 56,352 lb. valued at $197,232 from the 13,023 lb. worth $27,999 produced in 1959.

Magnesium.—Dominion Magnesium Limited was the only producer of magnesium in 1960. Its thermal reduction plant and adjacent dolomite quarry are located at Haley, Ont. Production of magnesium in 1960 amounted to 14,746,427 lb. valued at $4,280,232 compared with 12,204,448 lb. valued at $3,179,515 in 1959.

Other Metals.—Canada also produces antimony, bismuth, cadmium, calcium, thorium and tin, mainly as by-products in the refining of base metals. Of these metals, the most important were cadmium, with a 1960 production of 2,244,783 lb. valued at $3,187,591, bismuth with 464,440 lb. valued at $832,342, tin valued at $541,065, and antimony at $496,400.

CANADIAN METALLURGICAL DEVELOPMENT*

In 1940, Canada's mineral industry produced metallics, non-metallics, mineral fuels and structural materials valued at $530,000,000; in 1960 the value of mineral output reached almost $2,410,000,000. The growth during this period reflects expansion resulting from the needs of World War II and subsequent postwar industrialization in this country.

Although a portion of the increase in value resulted from higher prices for mine products, there has been a steady and significant increase in physical volume in all but a few minerals. The steady rise in mineral production has been accompanied by increased cost of operation so that the industry has been faced with many complex problems including the depletion of the richer ore reserves. The successful application of many new and improved metallurgical processes has made possible the economic development of less accessible, medium-grade and finally low-grade mineral deposits.

---

* A review of the past twenty years, prepared under the direction of Dr. John Convey, Director of the Mines Branch, Department of Mines and Technical Surveys, Ottawa.

The mineral and metal needs of World War II gave stimulus to the development of research facilities by federal and provincial governments, universities and the mining industry. This capacity, applied initially to the war effort, has become an essential part of present-day operation in Canada's growing role as a producer and supplier of world markets in competition with expanding mineral production in a number of other countries.

Uranium

Uranium mining in Canada originated indirectly from the radium industry which developed on the eastern shore of Great Bear Lake at Port Radium in the Northwest Territories. In 1933, Eldorado Gold Mines commenced production of radium and silver from a rich pitchblende deposit in this area, using a process developed in the Mines Branch laboratories. The operation continued until 1941 when the mine was closed. In 1942, with nuclear uses of uranium becoming important to the war effort, the mine was taken over by a Crown company, Eldorado Mining and Refining Limited, and by 1944 the company was producing a uranium concentrate using gravity methods.

Early in the atomic energy program it was apparent that the necessary increase in uranium production would require more efficient extraction processes. In 1945, the Mines Branch of the now federal Department of Mines and Technical Surveys began securing new staff for its Radioactivity Section which had responsibility for the development of processes for the treatment of uranium-bearing ores. By 1949 this group had developed a satisfactory sulphuric acid leaching process for the Port Radium gravity concentrate tailings. The next work undertaken by the Radioactivity personnel was test work on the Beaverlodge ores from Eldorado Mining and Refining Limited which have a higher carbonate content than those at Port Radium. The problem was solved by use of sodium carbonate-sodium bicarbonate solution leaching methods. In 1953 the first samples from the Gunnar Mine in Saskatchewan were received for testing. The same year, samples from the vast deposits in the Elliot Lake area were submitted. Successful processes were developed by use of an acid leach followed by the introduction of ion exchange for the purification of solution prior to precipitation. This resulted in production of high-grade concentrates which were required to meet contract specifications.

The peak of uranium production was reached in 1959 when 31,784,189 lb. of uranium oxide valued at $331,143,043 were produced, and uranium led all other metals in value of production.

Eldorado Mining and Refining Limited refines uranium at Port Hope, Ont. The company produces uranium metal and uranium compounds of consistent quality and the highest purity. Through its facilities and those of associated companies, the metal can be supplied in the form of machined ingots and forged, rolled and cast shapes, and completely fabricated fuel elements. Uranium-dioxide fuel elements of ceramic grade can also be supplied. However, only a small percentage of the uranium concentrate from Canadian mines is refined at Port Hope. Most of it is shipped from the mines direct to the United States and the United Kingdom. Canadian contracts with the United States Atomic Energy Commission will terminate in 1966 and it is estimated that annual uranium production will have declined to 2,200,000 lb. by that time.

Of increasing interest is the research on non-nuclear uses of uranium being conducted by the Mines Branch in co-operation with Eldorado Mining and Refining Limited. This project was undertaken in 1959 to help close the gap between Canada's uranium production capacity and the reduced demand that will occur on the termination of United States contracts. The results of this research have shown considerable promise in the use of uranium as an alloying agent to improve fatigue strength, stress corrosion resistance and elevated temperature strength of certain commercial steels.

Prior to World War II, uranium and uranium compounds were used in the arts and industry as colouring materials for ceramics, as chemical reagents, and in a variety of alloys. At that time, however, the metal and its salts were costly and the supply was limited. In addition, the preparation of pure metal was difficult and relatively little was known of the physical and chemical properties of the metal or its compounds. Extensive studies made as part of the nuclear program greatly increased the knowledge of this metal and resulted in the development of more efficient and less costly production methods.

To exploit the potential of uranium in commercial applications unrelated to the nuclear program, the uranium-producing companies in Canada joined together late in 1960 to form the Canadian Uranium Research Foundation,* the stated objective of which is "to provide for research in the use of the products of the uranium industry, to disseminate information relative to such products and to promote, foster, and stimulate the uranium industry".

From their own resources the uranium producers have agreed to provide a minimum of $250,000 per year for five years to support the Foundation, contributions being based on the value of output by individual companies. Although the principal effort of the Foundation is directed toward immediate applications, nevertheless it is considered desirable that a small proportion of the funds be expended on longer term projects of a more basic nature. The investigation of additions of uranium to steel now comes under the Foundation, with the work continuing in the Mines Branch laboratories.

Important developments on two nuclear-power stations are under way—a 20,000-kw. experimental station, known as NPD-2 (Nuclear Power Demonstration) being built near Rolphton, Ont., and a full-scale 200,000-kw. station, known as CANDU (Canadian Deuterium Uranium) under development on the shores of Lake Huron, nine miles north of Kincardine, Ont. These developments are described at pp. 378–383.

Sulphur

The accelerated industrial expansion in Canada during the past two decades has been accompanied by a steadily growing need for sulphur. Sulphur is usually consumed as sulphuric acid but in Canada large amounts of elemental sulphur are required by the pulp and paper industry. Other consumers are the fertilizer, chemical, uranium and steel industries.

Although there are no known deposits of sulphur in this country, sulphur or its equivalent in other forms has been produced from native pyrite and pyrrhotite for many years. In 1959, by-product pyrite and pyrrhotite from base-metal mines amounted to 1,051,873 tons with a sulphur content of 418,220 tons, much of which was utilized as sulphuric acid.

However, a new and highly important source of this commodity was created by the natural gas industry of Western Canada which has experienced its greatest expansion since 1948. Natural gas is termed 'sour' when it contains appreciable amounts of hydrogen sulphide and carbon dioxide which must be removed prior to marketing. By the end of 1960, seven natural gas recovery plants in Alberta, one in British Columbia and one in Saskatchewan were in operation and several others were in various stages of construction. In the processing plant, hydrogen sulphide and carbon dioxide are removed from the natural gas by passing the gas stream through solutions of monoethanolamine and dimethanolamine. The acid fractions are completely soluble in these absorbents. When the absorbent solution is nearly saturated with acid gases, it is regenerated by heating. The concentrated hydrogen sulphide and carbon dioxide are thus driven off and the absorbent is recirculated to pick up more gases. The enriched hydrogen sulphide collected in this way is further processed to produce elemental sulphur.

---

* Member companies: Gunnar Mines Limited; Bicroft Mines Limited; Eldorado Mining and Refining Limited; Denison Mines Limited; Rio Algom Mines Limited; and Faraday Uranium Mines Limited.

It is estimated that during 1961 annual capacity of elemental sulphur will reach 1,500,000 tons. Until 1952, Canada's requirements for the elemental form were supplied by imports; today, large-scale exports are needed to market current production recovered as a by-product of natural gas processing.

Nickel-Copper-Iron Sulphide Ores

For more than 50 years, the nickel-copper-iron sulphide ores of the Sudbury district of Ontario have been the world's principal nickel source. Separation of copper from the nickel has been one of the major metallurgical problems in treatment of these ores. In the past, the bulk of the copper was removed by the Orford process. Now, much improved separation has been achieved by The International Nickel Company of Canada, Limited in the successful development of a process based on flotation and magnetic separation of slowly cooled bessemer matte to yield nickel sulphide, copper sulphide, and a metallic fraction containing the precious metals. This process, marking the first commercial application of mineral dressing principles to matte products, was established on a commercial scale at Copper Cliff in 1944, and by late 1948 all International Nickel matte was so treated.

Since the nickel sulphide was low in both copper and precious metals, it became possible to sinter part of it for direct production of nickel oxide sinter, without the previously required refining operations. Beginning in 1956, another portion of the nickel sulphide has been used in production of matte anodes for direct electrorefining of nickel and recovery of high-purity sulphur, selenium and cobalt. This new process eliminates traditional operations of high-temperature converting of reverbatory furnace matte to blister copper which is cast into anodes for electrorefining. Instead, the molten matte is cast directly into sulphide anodes and electrolyzed. At International Nickel's new plant at Thompson, Man., the molten matte is produced in electric furnaces.

High-iron content of nickel concentrates produced at Copper Cliff has been a controlling factor in nickel smelting capacity. Solution to the problem has been found by separating an iron concentrate of low nickel and sulphur content, with virtual elimination of copper, precious metals, and silicates.

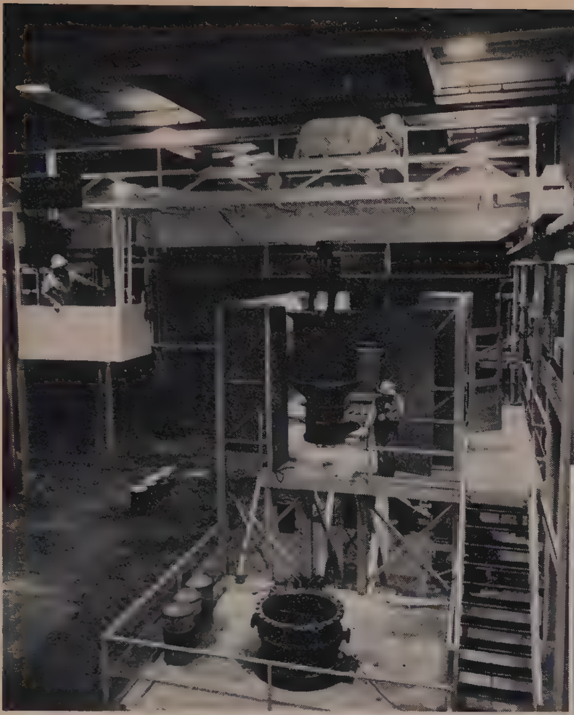
A $20,000,000 plant for separate treatment of 365,000 tons per year of pyrrhotite by the new process was constructed near Copper Cliff and its operation started early in 1956. It is the first unit of an installation which will have a capacity of more than 1,000,000 tons per year of pyrrhotite. Sulphur elimination is accomplished in fluid bed roasters, operating in closed circuit with cooling boilers and cyclones. Nickel is extracted by atmospheric pressure leaching in ammoniacal solutions, following selective reduction of the calcine to magnetite and nickel metal in a kiln using gases for reduction. The magnetite fines are agglomerated into one-inch balls by pelletizing on discs and firing on a travelling grate. This premium product has been used very successfully as open hearth charge ore by the steel industry in Canada and the United States.

The bringing into production of the Lynn Lake property in Manitoba by Sherritt Gordon Mines, Limited in 1953 added another important source of nickel to Canada's supply. The process used by Sherritt Gordon in the treatment of the Lynn Lake nickel-copper ore for the concentration, extraction and recovery of the metals is a radical departure from the usual practice of treating sulphide ores. After selective flotation of the ore to yield a copper-sulphide concentrate and a nickel-iron sulphide concentrate containing some copper and a small amount of cobalt, the process is basically chemical. The copper concentrates can be economically smelted and refined in the usual manner.

The nickel-copper-cobalt-iron sulphide concentrates are leached under pressure in stainless steel autoclaves with air and aqueous ammonia to dissolve the nickel, copper, cobalt and most of the sulphur, leaving the iron and other impurities in the tailings. The copper is first removed from the solution as a sulphide by boiling, the nickel is precipitated by hydrogen under pressure, the cobalt is removed by treatment with hydrogen sulphide, and the end solutions are evaporated to produce ammonium sulphate.

URANIUM

Production of uranium metal at the Port Hope refinery of Eldorado Mining and Refining Limited. Uranium metal reaction vessel being removed from the reduction furnace after firing.



NICKE

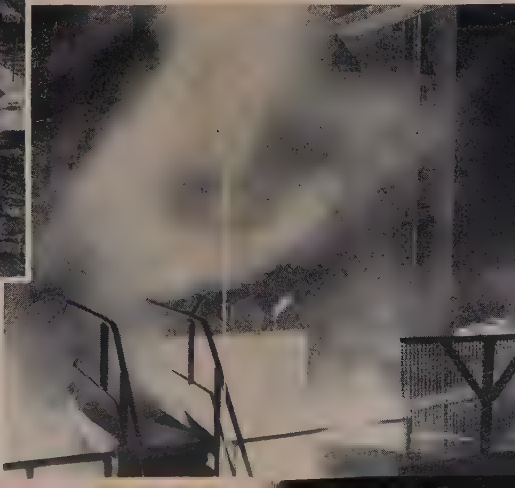
The concentration of nickel-copper minerals by flotation at Copper Cliff, Ont.

SULPHUR

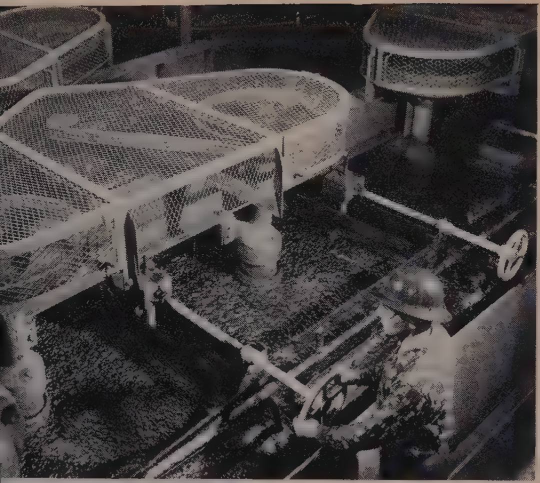
Jumping Pound natural gas and sulphur recovery plant in southern Alberta. In 1960 about 30 p.c. of Canada's requirements of sulphur was recovered as a by-product in the cleansing of natural gas.

BY-PRODUCT IRON

TITANIUM



-COPPER



←

At Kimberley, B.C., Western Canada's first iron-reduction plant is in operation against a backdrop of the famous Sullivan Concentrators. Roasted iron oxide produced from pyrrhotite (iron sulphide) in the fertilizer plant (foreground) is sintered in the iron plant (centre) before undergoing electric smelting in the plant at the right to produce pig iron.

IRON ORE

↑

Large open-pit mine and concentrator at Lac Jeannine in northern Quebec. Although the whole Quebec Cartier operation is still in the development stage, shipments of concentrates began in mid-1961.

STEEL

↑

Oxygen steel-making converter being charged with liquid pig iron from the blast furnaces. After charging is completed, the converter is tipped upright and the lance carrying the oxygen at high pressure is lowered into the vessel to produce liquid steel.

The application of this basic process to other materials for production of nickel, cobalt and copper has been demonstrated in both laboratory and pilot plant, and a continuing program of research and development is maintained to improve process details and broaden the application.

Preliminary figures for 1960 show that once again nickel became the leading metal with a production of about 427,283,000 lb. valued at $312,738,000.

By-product Iron

In January of 1961, The Consolidated Mining and Smelting Company of Canada Limited produced pig iron in its new smelter at Kimberley, B.C. The unique feature of this plant is the use of roasted pyrrhotite concentrate as the source of iron.

It is estimated that 28,000,000 tons of pyrrhotite tailings have accumulated from the concentration of lead-zinc ore from the great Sullivan mine. This concentrate is roasted to provide sulphuric acid for the manufacture of phosphate fertilizer. The iron calcine from the roaster is being treated on a sintering machine for use in an electric reduction furnace.

Annual capacity of the furnace now in operation is 36,500 tons of pig iron. As markets expand, electric smelting facilities will be developed and a basic oxygen furnace for the production of steel ingots as well as light steel rolling-mill facilities are contemplated. Thus, a fully integrated electric smelting plant for the production of steel shapes will be developed to serve the growing needs of Western Canada.

Titanium and Remelt Iron

Titanium is a low-density silvery-white metal that owes its importance to a combination of lightness, strength and resistance to corrosion. Because of its high strength-weight ratio, titanium and its alloys have special application in the aircraft industry, particularly in jet aircraft and guided missiles. There is no commercial production of titanium metal in Canada at the present time but titanium metal supplied by imports of sponge, ingots and billets is used in the production of aircraft components by several Canadian companies. The Mines Branch conducts investigations on various phases of titanium research from processing of ores to methods for production and fabrication of its alloys.

Canada's titanium industry is based on the use of ilmenite for the electric-furnace production of titanium-dioxide slag used in the manufacture of pigment and of co-product remelt iron. New records were established in 1960 for shipments of ilmenite by Quebec Iron and Titanium Corporation from Havre St. Pierre, Que., to the smelter at Sorel, and in shipments of titanium-dioxide slag and remelt iron from the smelter to the company's customers.

In 1950 this company began test operations at Sorel on ores from the world's largest known ilmenite deposits at Allard Lake. Concentrates from the up-graded ore analyzing 37 p.c. titanium dioxide and 42 p.c. iron are calcined in rotary kilns to lower the sulphur content. Electric smelting of this product in arc furnaces with powdered anthracite coal yields a slag containing about 72 p.c. titanium dioxide with 11 p.c. iron, and a low phosphorus iron containing about 0.12 p.c. sulphur and 2.25 p.c. carbon. This remelt iron is ladle-desulphurized to a low-sulphur content, and other constituents adjusted as necessary before casting into pigs. Production in 1959 amounted to 145,959 tons. In a recent expansion program the number of furnaces has been raised to eight, designed to consume 2,400 tons of beneficiated ore daily to produce 400,000 tons of titania slag and 300,000 tons of high-grade iron annually.

The only current producer of titanium-dioxide pigment is Canadian Titanium Pigments Limited at Varennes, Que., which uses the titanium-dioxide slag from the Sorel smelter. Sulphuric acid, the other main ingredient used in the manufacture of the pigment, is made in the company's contact acid plant adjoining the pigment processing plant. Capacity is rated at 18,000 tons of pigment a year, present output going to domestic producers of paints, paper, rubber, plastics, floor tile, linoleums, etc.

Magnesium

Early in World War II, interest was reactivated in magnesium, a metal much needed at that time. This led to the development of the Pidgeon process based on the reduction of calcined dolomite by ferrosilicon in a vacuum. A very high purity magnesium metal that can be successfully alloyed was achieved by this method. Between the years 1942 and 1945, Dominion Magnesium Limited at Haley, Ont., produced 20,000,000 lb. of high-purity metal from the abundant dolomite ores in that area.

Less Common Metals

A number of metals virtually unknown only a few years ago are now in the limelight of scientific experimentation as the metallurgist seeks the unique characteristics required in an atomic and space age.

Canada's only producer of lithium concentrates and products is Quebec Lithium Corporation which has a mine and mill located at Lacorne, Que. Drilling at the property has indicated one of the largest spodumene deposits in the world. In 1960 the company constructed a lithium-chemical plant at the mine site. Initial feed for this refinery was 50 tons of chemical-grade spodumene concentrate per day having a yield of 12,000 lb. of lithium carbonate. Lithium compounds are used chiefly as ceramic raw materials and in lubricating greases. Common applications include use as a constituent in storage batteries and refrigeration systems. Looking to the future, lithium has potential uses in atomic energy applications and in solid propellants.

During the past five years considerable interest has been aroused by the finding of large low-grade niobium deposits scattered intermittently between Algoma, Ont., and Montreal, Que. Special attention has been given to the occurrences in the Oka area where niobium is found in three different minerals, pyrochlore, perovskite and niocalite; the last—an unusual mineral—was recently identified by an officer of the Mines Branch. Detailed mineralogical studies have been carried out on these different minerals and results made available to the companies interested in the deposits. At least one company has developed a flotation process and has erected a plant for the production of pyrochlore concentrates. Niobium metal, virtually free of other metallic contaminants, has been prepared in the Mines Branch laboratories. The metal was produced from niobium pentachloride which is derived from pyrochlore concentrate. The addition of small quantities of niobium to carbon steel results in the improvement of the mechanical qualities of the steel and it is expected that substantial amounts will be used for this purpose as well as in high temperature alloys. Because of its resistance to corrosion, niobium will have important applications in the chemical field.

Beryllium, a valuable metal used widely as a hardening agent in copper alloys, has important applications in nuclear reactors as a moderator and reflector of neutrons and as sheathing for fuel rods. It has not yet been produced from any deposits in Canada. A large complex orebody with a significant content of beryllium oxide has been discovered at Seal Lake in Labrador. Mineralogical investigations conducted at the Mines Branch have led to the isolation of several interesting minerals. The chief ore mineral of this deposit is barylite and a comprehensive study is being made of suitable methods for the recovery of beryllium values. At the present time various mineral-dressing techniques are being applied.

Cesium is one of the metals with potential in this field. The Mines Branch is conducting a co-operative study with the Chemalloy Corporation of cesium-bearing pollucite deposits at Bernic Lake in Manitoba. This is a most unusual deposit because of the remarkable combination of metallic elements that it contains. Mineralogists at the Branch have made substantial progress in the study of the mineralogy, the mineral associations, and the distribution of the elements among the minerals found. The nature of this deposit can be considered an alkaline complex in which the metals cesium, rubidium and lithium are prominent, with minor amounts of tungsten, tin and tantalum. An acid leaching process for the extraction of cesium has been developed on a laboratory scale by the Branch. An important use predicted for cesium is as a fuel for ionic-drive rocket engines for space flight. It will have many applications in chemical and metallurgical processes, for example as a catalyst in hydrogenation, as well as in the medical field. However, there is no established commercial market at the present time. The deposits are, accordingly, considered as a future resource with research being carried out in advance of industrial requirements.

Iron Ore

Between 1886 and 1924, 6,500,000 tons of iron ore were produced in Canada but during the following 14-year period no iron ore shipments were recorded. However, production was resumed in 1939 when Algoma Ore Properties Limited brought its Helen mine in the Michipocoten area back into production and since that time there has been a continuous growth in this industry, particularly since 1954 when first shipments were made from the Quebec-Labrador deposits. In 1959, producers' shipments reached an all-time high of 21,488,325 tons valued at $192,666,101.

Most of the recent growth has been based on large reserves of direct-shipping ores found in Labrador and Quebec and, to a lesser extent, in Ontario. Much more important are the technological advances in iron ore beneficiation which make possible the exploitation of many low-grade iron formations that are relatively common in these areas. These advances, combined with the inability of direct-shipping deposits to meet the demand for iron ore, which is increasing particularly in the United States, assure the growth of the industry and the accompanying expenditure of large sums of capital. An important new source of supply is the development by Quebec Cartier Mining Company in the Lac Jeannine area. Approximately 20,000,000 tons of crude ore grading 30 p.c. iron from one open pit mine will be required to produce 8,000,000 tons of concentrate annually.

Beneficiation of iron ore has received great impetus from steel producers in recent years as the emphasis has shifted from cost of ore to the cost of iron in the ladle, so that research and technology on both the grade and structure of the ore for blast furnace feed are essential.

Crushing and screening is the simplest form of beneficiation and practically all direct-shipping ores receive this treatment. It is applied by Iron Ore Company of Canada to its Schefferville ores. Concentration by Humphrey Spirals is a water gravity separation process which will be used on the coarser specular hematite ores of the Wabush Lake–Mount Wright–Mount Reed belt by Quebec Cartier Mining Company, Iron Ore Company of Canada and others. Typically, on iron ores consisting of magnetite, magnetic methods are most suitable. These methods may also be applied to ores containing hematite by first converting hematite to magnetite in a preliminary magnetic roast. The sintering process, the oldest and most widely used method of agglomeration, produces a porous, strong sinter cake. Algoma Ore Properties Division of the Algoma Steel Corporation, Limited use this process for their siderite-containing ores while the Hilton Mines and Marmoraton Mining Company Limited use the other commonly applied agglomeration method—that of pelletizing—in the treatment of their fine magnetic concentrates.

The most obvious reason for the rapid development of iron ore deposits in Canada and sharply increased tonnages of shipments to the United States is the need of the steel industry of that country to secure an increased volume of ore from dependable and long-term sources of supply on economic terms. Iron ore represents a two-way traffic between the United States and Canada but it is only since 1953 that Canada has been a net exporter.

The Steel Industry

Steel is one of the best barometers of a nation's industrial growth and during the past two decades the progress made by Canada's steel industry has been remarkable. In 1939, steelmakers of this country produced 1,551,054 tons of steel ingots and castings and by 1959 had achieved a production of 5,921,728 tons. Despite the rapid growth of the industry since the close of World War II and its increased diversification, the domestic industry continues to supply only about 70 p.c. of steel mill products that are consumed. The remainder, consisting mainly of plate, heavy structurals, skelp and wide sheet, is supplied in whole or in part through imports chiefly from the United States, with smaller amounts coming from the United Kingdom, Western Europe and Japan.

Four fully integrated companies are the nucleus of the Canadian steel industry: The Steel Company of Canada, Limited, Hamilton, Ont.; Algoma Steel Corporation, Limited, Sault Ste. Marie, Ont.; Dominion Steel and Coal Corporation, Limited, Sydney, N.S.; and Dominion Foundries and Steel, Limited, Hamilton, Ont. During 1960, production from these four companies amounted to approximately 5,300,000 tons and an additional 500,000 tons were produced by a number of electric smelting plants.

Noteworthy developments have taken place during the past few years. Companies have increased capacities and adopted many changes in technology which include new types of concentrated furnace feed and more efficient iron and steelmaking processes.

The Steel Company of Canada, Limited, which produced 2,152,000 tons of steel in 1960, is completing a $60,000,000 expansion program which will both diversify output and increase the company's capacity to 3,000,000 tons a year. Included in this program is a second electrolytic tinning line which will double the capacity for the manufacture of tin plate, a new $10,000,000 continuous-weld pipe mill now in operation at Contrecoeur, Que., and a fifth open hearth furnace of 400-ton capacity.

Dominion Foundries and Steel, Limited produced 1,000,845 tons of steel ingots and castings in 1960. This company was the first steel producer in Canada to introduce the basic oxygen process. Expenditures on new plant facilities totalling $55,000,000 during the past two years have been made by this company. Major additions included three new stands in the hot-rolling mill, a 56″ cold-rolling mill and a third oxygen gas producing plant. In 1960, a third blast furnace, a second continuous-galvanizing line, four new soaking pits and additions to the oxygen steelmaking plant were made. Ingot capacity is now rated at 1,250,000 tons a year.

Algoma Steel Corporation, Limited, which produced 1,278,000 tons of steel ingots and castings in 1960, has also increased capacity in a program that commenced in 1956. An important addition is Canada's first wide-flange beam mill which will produce wide beams not previously made in this country. During the four years prior to construction of the mill in 1960, Canada's imports of wide-flange beams averaged 200,000 tons annually. Algoma Steel was the second producer to use the basic oxygen steelmaking process.

Dominion Steel and Coal Corporation, Limited increased capacity at its Sydney Mines works in 1959 from 930,000 tons to 1,000,000 tons annually. In 1960, production reached 864,300 tons.

A wide range of alloy and specialty steels is produced by Atlas Steels Limited in its plant at Welland, Ont. A continuous steel casting machine, one of the first on this Continent, is in operation there. The company has installed a hot planetary mill that will take slab from the continuous casting machine and in a single pass convert it to a thickness of approximately one-quarter inch. These and other recently installed facilities place Canada in a favourable position for the economical production of stainless steel mill products.

Crucible Steel Company of Canada, formed in 1959 to acquire the steelmaking facilities of Sorel Industries Limited at Sorel, Que., is now in operation and has announced its intention of producing a wide variety of carbon and alloy tool steels, stainless steel and other alloy steel products for domestic and export trade.

New Trends in the Steel Industry.—The growing use of low-cost tonnages of oxygen in the production of both iron and steel is a significant trend in the industry. During the past six years, the basic oxygen process has become firmly established as an important method of refining blast furnace hot metal into steel. This is an oxidation process similar to the open hearth furnace but operating at a much faster rate by top blowing a molten bath of iron with gaseous oxygen.

The basic oxygen method uses high-purity oxygen to produce quality steel at high-tonnage rates for a low cost. The furnace or converter used is a refractory-lined pear-shaped vessel into which is charged molten pig iron from the blast furnace and a limited amount of scrap. Oxygen is blown onto the molten bath surface through a water-cooled lance located centrally in a vertical position. Because of the high rate of oxygen supply, oxidizing reactions are very much faster than in the open hearth and existing vessels can produce over 100 tons of steel an hour. The bulk of the steel produced in North America has been in the low-carbon range but the basic oxygen method is capable of producing a wide range of carbon and alloy steels with low nitrogen, phosphorus, sulphur and hydrogen contents.

The present basic oxygen process capacity in North America is 5,500,000 tons per year. Of this total, approximately 1,500,000 tons of capacity is located in Canada, at Dominion Foundries and Steel and at Algoma Steel Corporation.

The open hearth furnace continues to improve in steel production rate and economy by using oxygen which makes it more competitive with the basic oxygen process. The blast furnace method of producing iron is by far the most important at present because it enables quantities of the metal to be produced at a relatively low cost. Dominion Foundries and Steel is the first company to apply heavy oils for the partial displacement of coke in the blast furnace process on a commercial basis, and other Canadian companies are actively considering this practice of introducing fuels through the tuyères of the blast furnace along with the air blast to achieve improved fuel economy. Although the cost of construction of a blast furnace is enormous and there is comparatively little flexibility in its operation, it is expected that it will continue to be the predominant iron producer in large centres of population. However, electric smelting and direct reduction plants of comparatively small capacity will be constructed in various parts of the country, the type of process depending on local market conditions.

In recent years another new development is being applied in the steel industry. This is the use of vacuum both for degassing and for melting of steel. It has been shown that small amounts of gases and impurities in steel can be removed by vacuum methods to produce a purer and more homogeneous product with higher physical properties. Research conducted at the Mines Branch has included a broad program on vacuum arc melting and vacuum degassing either by applying vacuum to the ladle or by stream degassing as the steel is poured. The main benefit is removal of dissolved gases, principally hydrogen.

Important also is the application of direct iron reduction methods for the production of pig iron or semi-steel and sponge iron which may be used in the electric steelmaking furnace to produce high-quality steels. An expanding market may be expected for these products, particularly in Western Europe in areas where supplies of scrap metal are diminishing or where existing scrap contains prohibitive amounts of impurities. Strategic-Udy Metallurgical Limited at Niagara Falls, Ont., has under development a process for the treatment of low-grade and complex ores to produce pig iron and semi-steel. A second process under development is the production of sponge iron pellets by Freeman Corporation, Cap de la Madeleine, Que. Three other processes are under development in Canada and extensive trials have been made of processes applicable to the complex ores of the Peace River district by Premium Steel Mills Limited.

Subsection 2.—Industrial Minerals

The total value of industrial mineral production increased in 1960 to a new high of $503,967,000. Several minerals recorded gains and new production records were established for asbestos, nepheline syenite, elemental sulphur and sodium sulphate. The highlights of a number of significant developments in this segment of the mining industry during the year are outlined below.

Asbestos.—During 1960, Canadian asbestos mines shipped a record 1,141,000 tons valued at $119,000,000 to world markets. While Canada has long occupied the most prominent position in world asbestos, that position is being challenged by growing production in the U.S.S.R.

Chrysotile, the most widely used variety of asbestos, occurs in several places in Newfoundland, Quebec, Ontario, British Columbia and the Yukon Territory. The main centre of the industry is, however, in the Eastern Townships region of Quebec where 12 mines account for more than 90 p.c. of the nation's production. Two other mines are located elsewhere in Canada—one in northern Ontario and one in northern British Columbia. A major development in 1960 was the decision in October to prepare the Newfoundland deposit of Advocate Mines Limited for production in 1963. The decision followed an intensive exploration and testing program by Canadian Johns-Manville Company Limited, in association with Patino of Canada, Amet Corporation Incorporated, and Financière Belge de L'Asbest-Ciment S.A. The property, located at Baie Verte on the Burlington Peninsula, is a potential source of fibre for the asbestos-cement industry. Murray Mining Corporation Limited continued exploration of a deposit near Deception Bay in northern Quebec. Further diamond drilling added to the company's estimate of possible ore reserves.

Early in 1960 an important new use for short fibre became apparent. The addition of 2 or 3 p.c. of group-7 asbestos to asphalt paving mixture has been demonstrated to increase the resistance of road surfaces to loads and temperature variations, improving flexibility and resistance to cracking, especially at low temperatures. Johns-Manville Corporation, which pioneered the development, forecasts an eventual market of 500,000 tons annually for this purpose.

Construction Materials.—Continuing activity in the construction industry and in road-building in Canada in 1960 sustained the production of those mineral commodities used in construction at a level close to the peak year of 1959. The increasing market for ready-mixed concrete, precast shapes and prestressed structures is reflected in the establishment of new facilities for the preparation of these materials and in the evident trend toward improved quality and more uniformity in aggregates.

For several years after World War II, considerable cement was imported into Canada from the United States and elsewhere but growth of the Canadian industry has reversed this trend and Canada now exports cement to the United States. Expansion continued in 1960; the completion of one new plant and additions to others increased capacity of the industry by 14 p.c. to more than 8,500,000 tons. At the end of the year there were 19 cement plants in operation in all provinces except Nova Scotia and Prince Edward Island. The cement plant built by Miron and Frères Ltée at St. Michel, Montreal, and completed early in 1960 is Canada's second largest. It is a dry-process plant which uses new techniques for automatic control and contains the largest kiln of its type in the Western Hemisphere—a 550 x 15-ft. unit with an annual capacity of over 4,000,000 bbl. To keep pace with growing markets in the western provinces, the Edmonton, Alta., plant of Inland Cement Company Limited was enlarged by the addition of a 340-ft. rotary kiln, increasing its capacity by 50 p.c., and the capacity of the Regina plant of Saskatchewan Cement Company was also increased.

Lightweight aggregates were still in prominence in 1960 and late in the year two new plants were under construction in Western Canada. There were in operation throughout the country 10 plants expanding clay and shale, 10 processing vermiculite and eight expanding perlite. Other plants were processing slag from the steel industry into lightweight aggregate. It may be noted that all flooring slabs in the 42-storey structure forming the nucleus of the Ville Marie Plaza project in Montreal are being cast in lightweight aggregate concrete.

The value of production of the clay products industry decreased in 1960, reflecting the decline in housing construction. Cooksville-Laprairie Brick Limited is building a new plant near Ottawa for the manufacture of brick and tile from local shale.

Potash.—While there was no production of potash in 1960 from the extensive deposits in Saskatchewan, it is anticipated that two companies will be mining the mineral by late 1961 or early 1962.

At mineable depths varying from 2,800 feet to 3,400 feet, what is believed to be the world's largest high-grade deposit of potash, in the form of sylvite and carnallite, occurs under a large area of southern Saskatchewan. Reserves have been estimated at over 6,400,000,000 tons of recoverable potash grading more than 25 p.c. K_2O. Attempts to win potash from this area have encountered technical difficulties caused by the wet and largely unconsolidated strata known as the Blairmore formation.

In 1959, the Potash Company of America Limited penetrated this formation near Saskatoon with a circular concrete shaft by the freezing method and potash was mined for several months but ceased when difficulty was experienced in maintaining a dry shaft. Since that time extensive shaft repairs have been in progress. International Minerals and Chemical Corporation (Canada) Limited, at Esterhazy, sank a concrete shaft to the Blairmore without difficulty but attempts to penetrate this zone by chemical grouting were not successful. The freezing method was then decided upon and experienced German engineers were engaged for shaft-sinking. From an underground working chamber a ring of holes was drilled through the Blairmore and calcium chloride refrigerant circulated at −50° F. to freeze the shaft area. When the area was frozen, shaft-sinking was resumed using cast iron tubbing, a method unique in Canadian mining. Seventy five-foot-high segmented cast-iron rings were installed in a 300-foot section of the shaft. These rings, manufactured in Canada to close tolerance, were sealed by lead gaskets to form a strong and impervious lining; the finished lining comprises 2,800 tons of cast iron. It is estimated that developing the Esterhazy mine to production will cost $25,000,000. Meanwhile, other companies continue the exploration of potash deposits in Western Canada. World production is expected to rise by 40 p.c. during the next ten years because of the growing demand for potash-bearing fertilizers.

Sulphur.—With the development of natural gas fields in the western provinces, Canada has emerged as a major source of elemental sulphur. During 1960, 837,000 tons (both elemental and sulphur equivalent of smelter gases and pyrite) were shipped to consumers, placing Canada among the top five leading sulphur-producing nations of the world.

Until 1952, Canada's requirements for the elemental form were supplied by imports; today, large-scale exports are necessary to market current production recovered as a by-product of natural gas processing. Based on estimates of gas reserves, the potential for recovery is between 150,000,000 and 300,000,000 tons of sulphur.

Although pyrite, other sulphides and smelter gases provide Canadian industry with much of its sulphur requirements, more than 30 p.c. of the 1960 production was recovered as a by-product in the cleansing of natural gas in Western Canada before transmission to market. By the end of the year, seven recovery plants in Alberta, one in British Columbia and one in Saskatchewan were in operation and seven others were in various stages of construction. It is estimated that annual capacity will reach 1,500,000 tons of elemental sulphur by the end of 1961.

The California Standard Company plant at Nevis, Alta., went on stream early in 1960 with an annual capacity of 40,000 tons; local gas is fed to this plant. By the year end, the British American Oil Company Limited was completing a 250-ton-per-day plant at Homeglen-Rimbey, south of Edmonton, and the Canadian Oil Companies Limited were completing a 110-ton-per-day plant at Innisfail, Alta. Late in the year, plans were announced for the construction of two large plants in southern Alberta by Jefferson Lake Petrochemicals of Canada Limited and Shell Oil Company of Canada Limited at east Calgary and Waterton Park, respectively. The combined output potential of these two plants will be more than 2,000 tons daily.

Other Minerals.—Canadian production of barite was more than a third lower in 1960 than in 1959, reflecting competition in export markets from Mexico, Peru and Greece. Normally, 90 p.c. of this country's production is exported. A new plant was completed at Onoway, Alta., by Baroid of Canada Limited for the processing of barite and bentonite for the oil industry in Western Canada.

Standard Lime Company Limited increased capacity of its Joliette, Que., facilities for the production of high-calcium lime. A new plant incorporating a 200-ton-per-day rotary kiln was constructed at a cost of $1,000,000.

By the end of 1960, Quebec Lithium Corporation had almost completed, at its mine site near Barraute, Que., a new plant for the production of lithium carbonate from decrepitated spodumene concentrates. This is the first such facility to be established in Canada. The company is planning to resume milling, after a year-long interruption, to produce glass-grade material.

Subsection 3.—Petroleum and Natural Gas

For the petroleum and natural gas industry, 1960 was a better year than 1959. New production and value records were set. Crude oil output at 192,308,250 bbl. was about 4 p.c. higher than the previous high of 184,778,497 bbl. produced in 1959 and the value of crude oil production at $432,495,700 was moderately above the 1959 value of $422,092,535. Although the value of natural gas produced in Canada is well below that of crude oil, the percentage gain in 1960 was much greater—production at 504,500,000 Mcf. was 21 p.c. above 1959 production and there was a corresponding rise in value to $48,027,110.

The shift westward and northward in exploration continued during 1960, Manitoba and Saskatchewan attracting less exploration activity than in preceding years. Altogether, 2,446 wells were drilled in 1960, somewhat fewer than in 1959, but there was a higher rate of new discoveries in drilling, with 120 indicated oil and gas finds. The greater ratio of gas to oil discoveries than in previous years reflected the increased interest in natural gas search following Federal Government permission to export about 1,000 Mcf. of gas per day to the United States. The average depth of wells drilled in 1960 was 5,455 feet, about 400 feet more than in 1959; this is indicative of the greater depth necessary to reach potentially productive sedimentary strata in British Columbia and in the foothills area of Alberta. Canada's deepest oil well was completed at Fording Mountain, B.C., at a depth of 16,540 feet.

A moderate increase in petroleum and natural gas reserves was recorded in 1960. At the end of the year, crude oil reserves were placed at 3,700,000,000 bbl. and proved recoverable reserves of natural gas were conservatively estimated to be 26,900,000,000 Mcf. Capital investment in Canadian petroleum and natural gas industries during 1960 amounted to $649,300,000, including expenditures on exploration, development, production, pipe lines, gas processing, petroleum refining and marketing. The rate and scale of development in the petroleum and natural gas industry of Western Canada in recent years is indicated by the production data in Table 1.

1.—Crude Oil and Natural Gas Production in Western Canada, 1954-60

NOTE.—Many of the figures given for 1954-59 have been revised since publication in the 1960 Year Book.

Year	Crude Oil				Natural Gas		
	Man.	Sask.	Alta.	B.C.	Sask.	Alta.	B.C.
	'000 bbl.	'000 bbl.	'000 bbl.	'000 bbl.	Mcf.	Mcf.	Mcf.
1954	2,148	5,423	87,627	—	3,533	105,947	—
1955	4,146	11,317	113,045	—	6,707	130,999	—
1956	5,787	21,077	143,910	148	9,808	144,524	188
1957	6,090	36,861	137,490	345	13,994	179,334	8,275
1958	5,829	44,626	113,276	512	18,819	234,711	63,638
1959	5,056	47,442	129,967	866	33,613	310,407	68,756
1960	4,718	53,000	132,100	950	33,000	370,000	85,067

The natural gas figures in Table 1 do not include gas flared in the field which, in 1954, amounted to about 20 p.c. of gross gas production; in 1959, an amount equal to only 12 p.c. of gross production was flared. Increased demand for natural gas has made economical the gathering of gas which might otherwise have been flared. There has also been continuing progress in gas conservation procedures.

British Columbia.—Exploration in British Columbia in 1960 remained concentrated in the northeastern portion of the province where a number of important natural gas discoveries were made. Five new oil pools and 13 new accumulations of natural gas were indicated by exploratory drilling. An important gas discovery was made at Pocketknife, about 115 miles northwest of Fort St. John. Successful exploratory wells were also drilled in the Kotcho Lake and Fort Nelson areas. Additional gas discoveries were made at Laprise Creek, about 90 miles northwest of Fort St. John, in quantities sufficient to warrant connection of the field to the pipeline system of Westcoast Transmission Company Limited. About 60 p.c. of the 137 development and exploration wells drilled were successful.

The market for crude oil remains local in nature because of the lack of an oil pipeline joining the producing area to large markets. Consequently, British Columbia crude oil production remained at about 2,500 bbl. per day, although the potential output was about 12,000 bbl. per day. The value of natural gas production continues to be almost five times the value of crude oil production.

Alberta.—Exploratory drilling in Alberta resulted in 32 oil discoveries and 60 gas discoveries in 1960. Of the 1,643 exploration and development wells drilled, only 25 p.c. were failures. This favourable result reflected an emphasis on drilling in, or adjacent to, producing fields. Of all wells drilled in Western Canada in 1960, 67 p.c. were in Alberta. Although no fields as important as those found in preceding years were discovered, major extensions to several existing fields were made. In the Swan Hills region, 115 miles northwest of Edmonton, continued success in drilling enlarged the Judy Creek field to fifth place in estimated oil reserves, and by the year-end it was nearly joined to the larger Swan Hills field. These two fields combined, along with the adjacent West Judy Creek field, now have reserves approaching those of the Pembina field, Canada's largest oil field which has reserves of more than 650,000,000 bbl. Elsewhere in the province, there were a number of oil discoveries which may prove important after further development and appraisal.

Saskatchewan.—Exploratory drilling continued to decline in Saskatchewan during 1960. The number of exploratory wells dropped well below the 265 drilled the previous year because of the lack of significant discoveries. Exploratory drilling resulted in 14 oil and three gas discoveries. In total, 577 wells were drilled, the majority being in the field-development category, and 436 of them were successful. Of all wells drilled in Western Canada in 1960, slightly less than 25 p.c. were in Saskatchewan. Drilling by the year-end had nearly merged the Weyburn and Midale fields which together have about 275,000,000 bbl. of recoverable oil reserves.

Manitoba.—The 11 exploratory holes drilled in Manitoba resulted in only one significant oil discovery—near the Virden-Roselea field. Of the 66 wells drilled, 48 were successful oil development wells. The province has no natural gas production.

Northwest Territories.—Of the 23 wells drilled in the Northwest Territories during 1960 one important new gas discovery was made—this was at Celibeta Lake. In the Arctic islands, which attracted much attention in 1959 as a possible oil-producing region, there was some levelling off in activity but about 42,000,000 acres of the more favourable potential oil-producing lands were still held by oil companies at the end of the year.

Eastern Canada.—Exploration drilling in Ontario, mainly for natural gas, declined from 116 wells in 1959 to 98 in 1960. The average depth of these wells was considerably less than those drilled in Western Canada and averaged about 1,900 feet. The exploratory drilling resulted in two oil wells and eleven gas wells. Work in Lake Erie continued where 38 exploratory and development wells were drilled. In the Maritimes, four exploratory holes were drilled without success.

Petroleum Refining and Marketing.—In 1960, two large new refineries came on stream. In Saint John, N.B., a 40,000-bbl.-per-day oil refinery began operations in May, resulting in a sharp decrease in imports of refined petroleum products into the Atlantic Provinces but causing an increase of foreign crude oil imports to the area. In Montreal, the start of production of a new 25,000-bbl.-per-day refinery raised to six the number of oil refineries there. These two new refineries were mainly responsible for the 8.5-p.c. increase in Canada's refining capacity in 1960 to 950,260 bbl. per day. Canada now ranks fourth in world refining capacity, following the United States, the Soviet Union and the United Kingdom. The rate of growth of the petroleum refining industry from 1940 to 1960 is indicated in Table **2**.

2.—Petroleum Refining Throughput Capacity, by Region, as at Dec. 31, 1940, 1950 and 1960

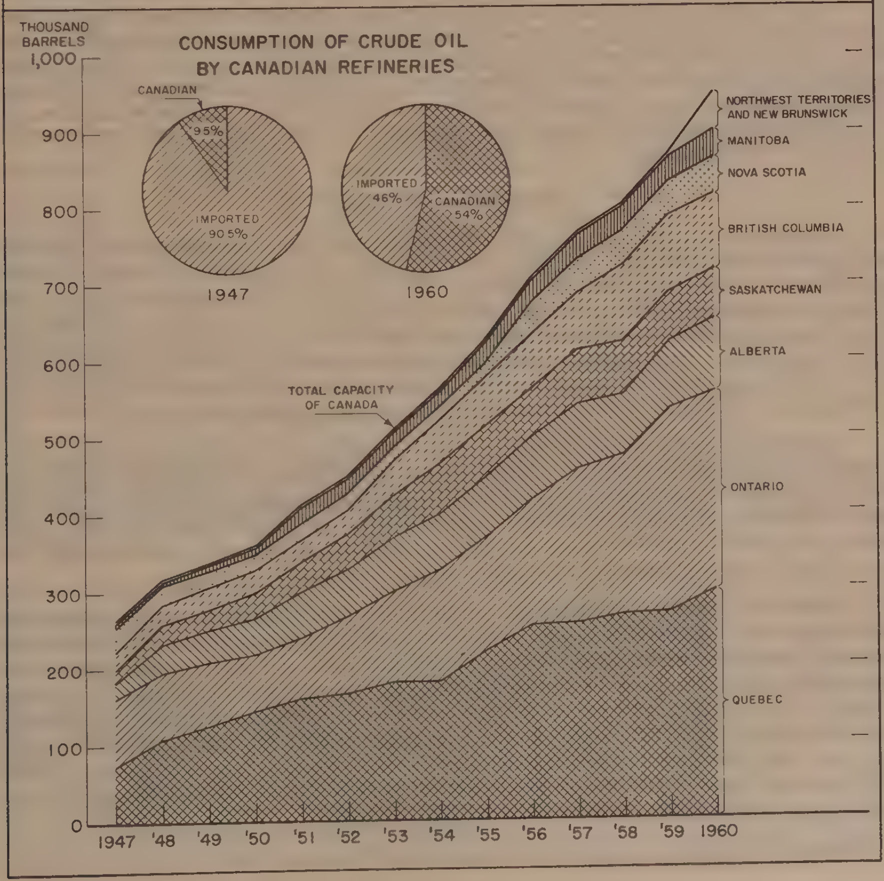
Region	1940		1950		1960	
	bbl. per day	p.c.	bbl. per day	p.c.	bbl. per day	p.c.
Maritime Provinces	32,750	15.1	22,300	6.2	96,800	10.2
Quebec	64,500	29.6	143,000	39.8	297,000	31.3
Ontario	57,500	26.6	75,200	21.0	260,820	27.4
Prairie Provinces and Northwest Territories	38,020	17.5	89,525	25.0	196,940	20.7
British Columbia	24,500	11.3	28,850	8.0	98.700	10.4
Canada	**217,270**	**100.0**	**358,875**	**100.0**	**950.260**	**100.0**

Domestic sources supplied 54 p.c. of Canadian refinery receipts in 1960, or 409,000 bbl. per day of the total of 759,000 bbl. per day received. Although Canada has sufficient producing capacity to supply refinery needs it has not been economically feasible for Quebec and the Maritimes to use domestic crude oil. All of the western provinces, most of Ontario and some of the northern United States use Canadian crude. The amount of domestically produced crude used in Canadian refineries in 1960 declined slightly from the 1959 total while consumption of foreign crude increased nearly 10 p.c. to 350,000 bbl. per day mainly as a result of the completion of the two new refineries in Eastern Canada. On the other hand, there was a 19.5-p.c. increase in 1960 exports to the northwestern and north-central United States which amounted to 110,000 bbl. per day. The growth in the domestic consumption of Canadian crude and in the consumption of foreign crude in Canadian refineries since 1940 is shown in Table **3**.

3.—Domestic and Foreign Crude Oil Received at Canadian Refineries, by Region, 1940, 1950 and 1960

Region	1940		1950		1960	
	Domestic	Foreign	Domestic	Foreign	Domestic	Foreign
	bbl. per day	bbl. per day	bbl. per day	bbl. per day	bbl. per day	bbl. per day
Quebec and Maritimes	—	56,040	—	133,364	—	340,000
Ontario	507	41,918	681	68,630	197,100	10,000
Prairie Provinces and Northwest Territories	22,367	1,867	71,422	633	145,700	—
British Columbia	—	16,805	—	21,458	66,200	—
Canada	**22,874**	**116,630**	**72,103**	**224,085**	**409,000**	**350,000**

DAILY CRUDE OIL CAPACITY OF PETROLEUM REFINERIES, 1947-60



Canadian refineries produce at least 85 p.c. of total domestic petroleum product requirements. In 1960, imports of refined petroleum products amounted to 36,000,000 bbl., a decrease of 3,000,000 bbl. from the previous year. Exports of refined petroleum products increased to 3,100,000 bbl. from 2,100,000 bbl. in 1959. Recent refinery construction has resulted in an improvement of Canada's trade position in petroleum products.

Natural Gas Processing and Marketing.—Natural gas is delivered from Western Canada by pipeline as far west as the Pacific Coast and as far east as Montreal. Recently, natural gas has been gaining a larger share of the market for fuels at the expense of coal and oil. In addition, large quantities of natural gas liquids are extracted from natural gas and sold in direct competition in fuel heating markets. Natural gas by-products also find a ready market at petroleum refineries, particularly in areas where the demand for lighter refinery products, such as gasolines, is above average. Sulphur is being extracted from natural gas in growing amounts each year and plant capacity to recover 700,000 tons daily had been installed by the end of 1960 (see pp. 523-524).

Five new gas-processing plants were added during 1960 to bring the total to 37. These have a combined treating capacity for over 2,000 Mcf. of raw gas daily. Canadian natural gas production in 1960 amounted to 504,500,000 Mcf., of which 105,000,000 Mcf. were exported to the United States. During the year, about 6,000,000 Mcf. were imported from the United States. In the Canadian market, Alberta is the largest consumer of natural gas. Its domestic, industrial and commercial requirements in 1960 totalled 138,000,000 Mcf., or 44 p.c. of the total Canadian consumer sales of 314,000,000 Mcf. Consumption in other provinces, on a percentage basis of total sales, was: Ontario 32 p.c., Saskatchewan 9.4 p.c., British Columbia 7.8 p.c., Manitoba 3.4 p.c., and Quebec 3.3 p.c. Natural gas usage in production, processing and transportation accounts for the difference between apparent supply and consumer sales.

Subsection 4.—Coal*

The continued and increasing competition from petroleum, natural gas and imported coal caused further decline in Canada's coal industry in 1959. Greater efforts were made by the industry to meet this competition. Mechanization of underground mining was advanced, especially in the Cape Breton Island coal mines. In the mines of the Dominion Coal Company Limited, the Dosco ripper-type continuous mining machines were modified by equipping them with wedge and shearing bar in order to improve the size consist of the coal. Development work was undertaken for the installation of mechanical mining in a small underground mine in New Brunswick working on an 18-inch coal seam.

Greater care and attention in the operation of mining equipment and increased coal preparation facilities are expected to improve the over-all quality of Canadian coals. Additional facilities for cleaning and drying various sizes of coal, in particular fine coal, were put in operation at various collieries in both Eastern and Western Canada. The implementing of quality control measures through coal sampling and analysis at various collieries should lead to greater customer satisfaction with coal as a fuel.

Assistance to the coal industry was given by the federal and provincial governments through research programs in co-operation with industrial organizations. The problem of fine coal production and disposal received much attention and research was directed toward improved mining methods and beneficiation by cleaning and briquetting. Development of new and modified combustion equipment was undertaken with greater efficiency and versatility in view. Through continued programs of sampling and analysis of marketable coal, the governments aided the industry in their efforts to maintain quality control. Surveys were made of the coking properties of coals in relation to their preparation for export markets and their use in prospective steel industries.

---

* This review covers the year 1959.

The Dominion Coal Board, through financial assistance in the acquisition of new equipment and subventions on coal transportation, continued assistance to the coal industry. Almost 26 p.c. of the coal production was moved with the aid of subvention payments, although the total tonnage to which this applied was 9.9 p.c. less than in 1958.

Production of coal in Canada for 1959 was down more than 9 p.c. to 10,626,722 tons, the lowest since 1909 and a drop of 44.5 p.c. from the record production of 19,139,112 tons in 1950. The average value for all coal was $6.952 per ton or 30.33 cents per million Btu. This declining production and accompanying mine closures were reflected in the employment at the mines, where the number of man-days dropped from 2,848,615 in 1958 to 2,481,498 in 1959—almost 13 p.c. Nova Scotia, the major coal-producing province, was most affected by the declining coal markets; the decrease in coal-mine employment in that province amounted to 18.4 p.c.

The major part (65.4 p.c.) of the coal produced was bituminous, valued at $8.990 per ton or 34.47 cents per million Btu at the mine. Subbituminous accounted for 16.3 p.c. of production and lignite for 18.3 p.c. The average value of subbituminous coal was $4.430 per ton, this being 23.69 cents per million Btu, and the value of lignite was $1.924 per ton at 12.44 cents per million Btu. Bituminous coal production decreased 10.4 p.c. and lignite 13.6 p.c., but subbituminous increased 2.9 p.c. as a result of the demand by thermal power plants in Western Canada.

The proportion of strip-mined coal continued to increase, more than 38 p.c. of the output being won by stripping methods in 1959. The output per man-day of coal from Canada's strip mines was 13.18 tons in 1959 compared with 3.00 tons from underground mines. This represents a decrease of 1.88 tons for strip mines and an increase of 0.11 tons for underground mines. The over-all output per man-day increased from 4.10 to 4.28 tons.

The consumption of coal in Canada decreased 2.6 p.c. in 1959 to 24,548,259 tons, representing a drop of 45.3 p.c. since 1950. More than 57 p.c. of the coal consumed was imported, about 89 p.c. of it being bituminous coal used in Ontario and Quebec. Total imports of coal were about 2 p.c. higher than in 1958. The production of coke used about 5,600,000 tons of coal in 1959, of which about 86 p.c. was imported. The sale of coal by retail fuel dealers to the commercial and household heating markets was steady but industrial consumption decreased about 8.2 p.c. to 10,024,779 tons, of which more than 53 p.c. was imported. Use of coal by railway locomotives dropped to 554,260 tons from 1,393,823 tons in 1958 and declined almost 11,000,000 tons in a decade. Exports of Canadian coal in 1959 amounted to 473,768 tons compared with 338,544 tons in 1958. Most of this went to the United States and Japan for blending in the manufacture of metallurgical coke. The manufacture of briquettes decreased from 204,050 tons in 1958 to 153,134 tons in 1959. The railways used more than 40 p.c. of the total consumption of 175,008 tons.

Coal is produced in five provinces and a large share of the market for the industry is concentrated in Central Canada where there is no coal production. A small amount of coal is also mined in the Yukon Territory. A review of the provincial activities of the industry follows.

Nova Scotia.—Nova Scotia, with a coal production of 4,391,829 tons, accounted for more than 41 p.c. of the Canadian coal output in 1959. Production was 16.7 p.c. lower than in 1958. The coal is high volatile bituminous coking coal mined in the Sydney, Cumberland and Pictou areas, and some non-coking bituminous coal in the St. Rose, Inverness and Port Hood areas on the west coast of Cape Breton Island. The over-all value at the mines increased to $9.957 a ton from $9.554 a ton in 1958. This represents about 37.8 cents per million Btu. The output per man-day was 2.72 tons in 1959 compared with 2.66 tons in 1958.

All Nova Scotia coal comes from underground mines, most of which are mechanized. Coal-washing plants are operated at two of the collieries and prepare about 20 p.c. of the province's coal production. Much of the output is used locally for industrial steam-raising, electric power production, household and commercial heating and the manufacture of metallurgical coke. In 1959 about 62 p.c. of the production was shipped to other provinces, mainly Central Canada. Subvention payments were made by the Dominion Coal Board on the movement of 2,154,034 tons.

New Brunswick.—New Brunswick's production, of which 82.3 p.c. was strip-mined, was entirely high volatile bituminous coal from the Minto area, with a small amount from the Beersville area. The record production of 1,003,387 tons in 1959, about 9.4 p.c. of Canada's output, represented an increase of about 27 p.c. over 1958. Average output per man-day from strip mines was 5.61 tons and from underground mines 1.83 tons. New Brunswick coals had an average value at the mines of $8.319 a ton, amounting to about 34.7 cents per million Btu.

Modern coal-washing plants, equipped with Baum-type or feldspar jigs, are operated at two of the strip-mining operations, enabling the beneficiation of about 45 p.c. of the province's coal output. A large part of the production is used locally for heating, electric power generation, and processing; about 13 p.c. is shipped to Central Canada and about 7 p.c. is exported to the United States. Government subventions aided in the moving of 137,613 tons during 1959.

Saskatchewan.—Coal produced in this province was entirely lignite, mined by stripping in the Bienfait and Roche Percée fields in the Souris area, and amounted to 1,947,380 tons, a decrease from 2,253,176 tons in 1958. This represents about 18 p.c. of the Canadian production. It was valued at the mine at an average of $1.924 per ton and, at 12.44 cents per million Btu, was the cheapest source of coal in Canada. The average output per man-day was 25.35 tons. More than 51 p.c. of the 1959 output was shipped to Manitoba and over 6 p.c. to Ontario for industrial, commercial and household use. Subvention assistance was given on 111,006 tons.

The production of briquettes, manufactured from carbonized lignite and used entirely for commercial and household purposes, decreased 15.4 p.c. to 34,789 tons.

Alberta.—Several types of coal are available in Alberta, ranging from semi-anthracite mined in the Cascade area, to subbituminous. Coking bituminous coals are present in the Crowsnest and Mountain Park areas but, owing to market conditions, they are at present mined only in the Crowsnest area. The coal is used for industrial steam-raising by the railways and for commercial and household heating. There was some export to the United States and Japan for use in the metallurgical industries. In several areas of the foothills, lower rank bituminous non-coking coals are available but production is confined mainly to the Lethbridge and Coalspur areas. The other coal areas produce subbituminous coals used mainly for household and commercial heating and thermal power generation.

Coal production in Alberta increased 0.4 p.c. in 1959 to 2,528,755 tons, this being about 24 p.c. of the nation's coal output. Production had been declining sharply since 1947 when the Leduc oil field was discovered and with the subsequent expansion of the natural gas industry. The 1959 production was about 32 p.c. of that of 1947. Subbituminous coal accounted for about 68 p.c. of the output and production increased almost 3 p.c. The output of bituminous coal decreased 2.2 p.c. to 816,275 tons. Of the total coal production, 47.6 p.c. was won by stripping, the average output per man-day being 17.40 tons compared with 4.50 tons for the underground mines. Bituminous coal was valued at $6.371 per ton and 25.77 cents per million Btu at the mine, and the average value of subbituminous coal was $4.430 per ton and 23.69 cents per million Btu.

Of the provincial production, 2.1 p.c. was shipped to Central Canada, 9.4 p.c. (mainly subbituminous) to Manitoba, 21.6 p.c. to Saskatchewan and 1.9 p.c. to British Columbia. Subvention assistance from the Dominion Coal Board applied on the movement of 323,813 tons of Alberta and British Columbia coal.

The output of briquettes, which are made from the semi-anthracite and low volatile bituminous coals of the Cascade area and the medium volatile coals of the Crowsnest area, decreased from 128,512 tons in 1958 to 99,499 tons in 1959.

British Columbia and Yukon Territory.—In British Columbia coal is mined on Vancouver Island and in the Crowsnest Pass (East Kootenay) district with a small output from the mines in the Inland district. These coals range from high to low volatile bituminous coking coals. Production declined to 751,492 tons, about 7 p.c. of the country's output, with an average value of $6.989 per ton and 25.29 cents per million Btu. About 11.7 p.c. of the output was from strip mines. The average output per man-day was 31.74 tons for strip mines and 3.80 tons for underground mines.

Beneficiation facilities located at Union Bay (Vancouver Island) and Michel (East Kootenay) process nearly all of British Columbia's coal production. Of the total production, 20.8 p.c. was shipped to Manitoba and 1.9 p.c. to Ontario. Negligible quantities were shipped to Alberta and Saskatchewan. About 14 p.c. of the output of coking coal from the Crowsnest area was exported to southwestern United States and Japan for blending in the manufacture of metallurgical coke.

A single briquetting plant operated in the province, producing mostly railway briquettes. Production was down more than 45 p.c. from that of 1958.

In the Yukon Territory 3,879 tons of coal were mined from a single underground mine with an average output per man-day of 2.79 tons. This coal was valued at $15.00 per ton and 65.50 cents per million Btu.

Section 2.—Government Aid to the Mineral Industry

Subsection 1.—Federal Government Aid

The Department of Mines and Technical Surveys.*—The federal Department of Mines and Technical Surveys came into being on Jan. 20, 1950, in the reorganization of the former Department of Mines and Resources. The Department has five branches—Surveys and Mapping Branch, Geological Survey of Canada, Mines Branch, Dominion Observatories, and Geographical Branch. The Department's functions include the administration of the Emergency Gold Mining Assistance Act, the Explosives Act and the Canada Lands Act.

Surveys and Mapping Branch.—The Branch provides the base maps required for use in the development of Canada's natural resources, produces and distributes many Canadian aids to navigation, is responsible for legal surveys of federal lands and provides a national system of levelling and precision surveys for use as geodetic control by federal, provincial and private agencies.

The Geodetic Survey provides the original surveys that form the framework or basic control for mapping throughout Canada and for engineering and surveying projects related to natural resources development. Survey stations are established at fairly regular intervals across Canada and are marked by permanent monuments whose latitudes, longitudes and elevations above mean sea level are determined with a high degree of accuracy.

The Topographical Survey provides topographical maps that show all significant natural and artificial features fundamental to the study and economic development of mineral and other natural resources. The Field Survey Section is responsible for the field surveys that provide ground control for mapping from aerial photographs, and the Air Surveys Section plots and produces maps from these aerial photographs. The National Air Photographic Library indexes, preserves and distributes prints of all aerial photography done by or for the Federal Government. The Topographical Survey also administers the Canadian Board on Geographical Names.

The Legal Surveys and Aeronautical Charts Division makes and records legal surveys of federal Crown lands in the Yukon and Northwest Territories, the National Parks and

---

* Revised, under the direction of the Deputy Minister, in the Editorial and Information Division, Department of Mines and Technical Surveys, Ottawa.

Indian lands and reserves. This Division prepares aeronautical charts and electoral maps and prepares and distributes flight manuals.

The Canadian Hydrographic Service is responsible for the charting of the coastal and inland navigable waters of Canada, the analyses of tides and tidal current phenomena and the investigation of water-surface elevations of the St. Lawrence–Great Lakes waterway. The resultant data are published in the form of official navigation charts, volumes of Sailing Directions, Tide Tables and Water Level Bulletins.

The Map Compilation and Reproduction Division prepares, drafts and reproduces maps, charts and plans for lithographic printing in multicolour. The work includes the preparation and photo-reproduction of air chart bases, the reproduction and printing of air information for aeronautical charts, the preparation and printing of topographic maps and the reproduction and printing of hydrographic charts.

Geological Survey of Canada.—The primary function of the Geological Survey is to obtain information on the geology of Canada that will be of assistance in the search for and development of mineral deposits. The results of its activities also provide a basis for the appraisal and conservation of Canada's mineral resources generally (including water supplies), for soil surveys and for the solution of geological problems that frequently arise in construction projects. Reports issued by the Geological Survey include: memoirs with fairly complete descriptive accounts of the geology of particular areas, usually accompanied by geological maps; bulletins dealing with problems rather than areas; papers issued as soon as possible after the close of the field season, treating separately of each area and summarizing the information acquired; and the Economic Geology Series dealing in a comprehensive way with mineral deposits of a particular type. Information circulars, issued in advance of the more detailed reports, contain data of immediate interest to prospectors. Coloured geological maps are issued on various scales from one inch equalling a few hundred feet to one inch equalling eight or more miles, the common standard scales being one inch to one mile and one inch to four miles. Preliminary maps showing the geology are issued shortly after the field season ends for those areas where the search for metals or minerals is active. Metallogenic maps show the Canada-wide distribution of known occurrences of particular metals classified according to the type of deposit.

The Regional Geology Division is responsible for mapping and studying the rocks of the eastern and western segments of the Precambrian shield, and the Appalachian and Cordilleran regions.

The Economic Geology Division investigates the geology of specific mineral deposits, applies and develops geochemical techniques, and maps and studies unconsolidated deposits that mantle much of the country and, in several provinces, carries out surveys of groundwater resources.

The Fuels and Stratigraphic Geology Division includes stratigraphic palaeontology, the geology of fuels (oil, natural gas and coal), subsurface geology, and research on coal. Its function is to establish the character, age, thickness and correlation of both exposed and concealed sedimentary formations and to map the distribution and structure of these formations with the object of determining the economic possibilities of prospective oil, gas and coal bearing areas of Canada.

The Petrological Sciences Division makes mineralogical, petrological, and isotopic studies of Canadian mineral deposits and associated rocks. Laboratories provide mineral identifications for the public, supply officers of the Survey with mineralogical and geochronological data, and permit research on the genesis of ores, fuels and rocks. Systematic mineral collections are maintained and mineral and rock collections are prepared for use by prospectors and educational institutions.

The Geophysics Division gathers, compiles and interprets geophysical data relating to the geology of Canada. Fundamental research is carried out in some phases of geophysical work.

Mines Branch.—Investigations undertaken in Branch laboratories cover a wide range of technical projects of importance to the advance of fundamental research; to the processing of ores, industrial minerals and fuels on a commercial scale; and to the theory and practice of physical metallurgy.

The Mineral Processing Division is concerned primarily with the development of economical methods of mineral dressing and with research toward the improvement of present processing techniques. It is equipped to conduct laboratory and pilot-plant studies involving a variety of procedures: crushing, grinding, gravity concentration, sink and float (heavy media) separation, magnetic and electrostatic concentration, amalgamation, cyanidation, flotation and roasting.

The Extraction Metallurgy Division seeks the development of better hydrometallurgical and pyrometallurgical processes for the treatment of ores and the solution to specific technical problems in this field. A substantial part of its efforts was recently devoted to ores of uranium, iron and other elements and to corrosion problems encountered in certain industrial and governmental projects. The Division accepts samples from operating mines or those under development.

The Mineral Sciences Division applies the principles of chemistry and physics to fundamental and long-term problems in the field of mineral technology and related aspects of metallurgy. It deals with ores, mineral and metal products, inorganic crystalline materials and radioactive substances. Its work ranges from relatively simple routine determinations to complex research problems requiring the most recent techniques and equipment.

The Fuels and Mining Practice Division studies the properties of fossil fuels in Canada to determine the most efficient means of utilizing fuel resources. Most of the work on coal is directed to investigations on the immediate problems of the industry and to engineering studies on the most efficient use of coal in combustion applications with particular reference to thermally generated electric power. Such investigations include work on the evaluation of cleaning performance and the beneficiation of coal fines that are difficult to market, the uses of coal in the metallurgical industries and the study of stress phenomena in mining. Research in petroleum is directed mainly to problems in the refining of heavy crudes and high-sulphur bitumens, and to the chemical evaluation of oils and bituminous substances for classification and genetic purposes.

The Physical Metallurgy Division aids the metal industries through the development of new alloys, new manufacturing techniques and new applications and in activities aimed toward improving present practices in metal fabrication. It also conducts fundamental research on the properties and behaviour of metals. The Division serves the Department of National Defence by extensive research and investigative work, concerned broadly with the development of defence materials and prototype equipment and with the metallurgical problems of that Department. It is also operative in the nuclear metallurgy field.

Dominion Observatories.—The two main units of the Dominion Observatories are the Dominion Observatory at Ottawa, Ont., and the Dominion Astrophysical Observatory at Victoria, B.C. Permanent magnetic observatories are maintained at Ottawa and Agincourt, Ont., Meanook, Alta., Victoria, B.C., and at Resolute Bay and Baker Lake, N.W.T. Seismic stations for recording earthquakes are operated at Victoria, Horseshoe Bay and Alberni, B.C., Banff, Alta., Saskatoon, Sask., Ottawa, Ont., Seven Falls and Shawinigan Falls, Que., Halifax, N.S., and Resolute, N.W.T.

The Dominion Observatory at Ottawa is responsible for the time service of Canada which involves nightly astronomical observations of star positions and radio broadcast services for distributing accurate time to all parts of Canada. Other astronomical activities centred at Ottawa include upper atmospheric studies by means of meteor observations, studies of the sun and its effect on earthly conditions and mathematical studies of the atmospheres of the sun and stars. The geophysical work, also administered from Ottawa, includes the magnetic survey of Canada with emphasis on aids to air and sea navigation, as well as field and observatory work of interest to the geophysical prospector. The methods of seismology are employed to study important aspects of the earth's crust in Canada and to assist in world-wide investigations of the earth's interior. Gravity observations are carried on throughout Canada with a generally similar purpose, special attention being paid to methods of locating mineral deposits.

The Dominion Astrophysical Observatory at Victoria, B.C., is devoted to fundamental research into the physical characteristics of the sun, stars, planets and the material of interstellar space. Its 73-inch reflecting telescope is one of the largest in the world and through its use many important contributions have been made to astronomical knowledge. A new radio telescope at Penticton, B.C., has given the Branch a valuable instrument for research in radio astronomy.

The Geographical Branch.—The function of the Branch is to organize and make available all the geographical data on Canada that might be of use in promoting the country's economic, commercial and social welfare. The work is of two kinds—the compilation of geographical material of national significance, and geographical surveys in the field. Land surface conditions, types of vegetation and the structure of towns and cities are typical subjects of investigation.

Mineral Resources Division.—The Division provides a mineral information service that is freely used by government departments, mining and allied industries and others interested in mining or its significance in the Canadian economy. A mineral resources index inventory is maintained of all known occurrences and of mines, both active and potential. The Division makes economic studies of different phases of the mining industry. It administers the Emergency Gold Mining Assistance Act, prepares reports on request to aid in the administration of such matters as tax exemptions on new mining properties, and prepares reports and briefs on general legislation, taxation and tariff matters connected with the mineral industry. The Division is widely known for its publications, among the most valuable of which are the annual reviews of production, marketing and other matters concerning 64 minerals. It issues more detailed economic studies of metals and fuels of current interest and prepares annual lists of metallurgical works, metal and industrial mineral mines, milling plants, coal mines and petroleum refineries. Also published are special monographs on mining laws, taxation and subjects of particular interest to the mineral industry.

Oceanography.—The decision of the Federal Government to expand oceanography in the Department of Mines and Technical Surveys has led to the institution of a long-range program of research to fill the great need for oceanographic data on the country's coastal waters for defence and resource development purposes. The program also includes studies of the special problems of the deep ocean.

The program comprises two major projects. (1) The establishment, in Bedford Basin near Halifax, of the Bedford Institute of Oceanography. This is a $4,000,000 project which is expected to be fully functional by the spring of 1963. When in operation, it will have a staff of some 300 persons, including oceanographers, hydrographers, submarine geologists and other scientific personnel and will be completely equipped to meet all the requirements of a modern oceanographic institute. In addition, the new Institute will permit the long-overdue expansion of the Atlantic and sub-Arctic sections of the Canadian Hydrographic Service, and will be the headquarters of the scientific staff of the Polar Continental Shelf Project. A multi-million-dollar shipbuilding program has been undertaken to provide the necessary fleet of oceanographic vessels. Two ships are under construction, three are in the design stage, and one will be transferred from the Royal Canadian Navy. The largest of the ships, the $7,000,000 *Hudson*, is under construction and is expected to be commissioned in 1962. (2) The Polar Continental Shelf Project, in which the Department each year sends a scientific expedition into Canada's Far Arctic regions to obtain a detailed knowledge of the waters and floor of the continental shelf in the Arctic

Ocean and of the channels between the northern islands of the Archipelago. The Project's staff includes physicists, hydrographers, geologists, geographers and biologists who, through joint studies, will obtain a more definitive picture of the characteristics of the region.

The Dominion Coal Board.*—The Board was established by the Dominion Coal Board Act (RSC 1952, c. 86) which was proclaimed on Oct. 21, 1947. By this Act the Board was constituted a department of government to advise on all matters relating to the production, importation, distribution and use of coal in Canada. The Board is also charged with the responsibility of advising upon and administering transportation subventions.

Ancillary to these principal duties, the Board is empowered to undertake research and investigations with respect to:—

(1) the systems and methods of mining coal;

(2) the problems and techniques of marketing and distributing coal;

(3) the physical and chemical characteristics of coal produced in Canada with a view to developing new uses therefor;

(4) the position of coal in relation to other forms of fuel or energy available for use in Canada;

(5) the cost of production and distribution of coal and the accounting methods adopted or used by persons dealing in coal;

(6) the co-ordination of the activities of government departments relating to coal; and

(7) such other matters as the Minister may request or as the Board may deem necessary for carrying out any of the provisions or purposes of the Act.

In addition, the Dominion Coal Board Act provides authority in the event of a national fuel emergency to ensure that adequate supplies of fuel are made available to meet Canadian requirements.

Assistance by transportation subventions, which have been maintained in varying degrees during the past 30 years, was designed to further the movement of Canadian coals by equalizing as far as possible the laid-down costs of Canadian coals with imported coals. As these costs and the conditions of the coal industry are subject to variation, the Board must review from time to time the rates of subvention and the areas where the assistance is required. The subventions in respect of the various Canadian coals are authorized by Orders in Council and are paid from moneys voted by Parliament for the purpose from year to year. During the year ended Mar. 31, 1960, a total of 3,090,022 tons was shipped under subvention and $15,491,077 was paid in assistance.

Coal subventions of a new type, based on the Btu content of coal used in thermal electric power production, were authorized in January 1958 by the Atlantic Provinces Power Development Act (SC 1958, c. 25). The Dominion Coal Board was designated as the Federal Government's administrative agency for subvention matters in agreements made with the provinces under this Act.

As agent to the Minister of Mines and Technical Surveys, the Board receives applications and administers loans under the Coal Production Assistance Act (RSC 1952, c. 173, as amended by SC 1958, c. 36, and SC 1959, c. 39). The Board also administers payments under the Canadian Coal Equality Act (RSC 1952, c. 34), which provides a subsidy on Canadian coal used in the manufacture of coke for metallurgical purposes. In the year ended Mar. 31, 1960, payments under this Act totalling $331,332 were made on 669,358 tons of coal.

The Dominion Coal Board has maintained a continuous review of Canada's fuel requirements. In view of the growing impact of oil and natural gas on the markets for Canadian coal, the Board and its staff have intensified the study of the relation of the competing sources of energy and of possible new outlets for the solid fuel.

---

* Prepared under the direction of W. E. Uren, O.B.E., Chairman of the Dominion Coal Board.

The Board, since its inception, has worked toward the co-ordination of the activities of various government departments and other bodies relating to coal. On the matter of technical research as related to marketing and distributing coal, the Board has maintained close liaison with the Fuels and Mining Practice Division of the Department of Mines and Technical Surveys. Dominion-provincial conferences on coal research have been held annually since 1949 for the co-ordination and exchange of ideas.

Government purchases of fuel, which constitute an important outlet for coal, have claimed a part of the Board's time. The Interdepartmental Committee on Fuel, set up in the past to co-ordinate and advise on the purchase and supply of fuel to the Armed Services, has remained active. The Dominion Fuel Committee, which was organized in 1956 along similar lines as an advisory body to other government departments, has demonstrated its value.

In a wider sphere, the Chairman of the Board has met annually with the Coal Policy Committee of the Provincial Ministers of Mines and the Board has given consideration to recommendations made by that body relating to coal. The Board has also kept contact with trade and other associations concerned with the various phases of the Canadian coal industry in order to foster better mutual understanding of government and private endeavour. It has generally constituted a central agency through which representations may be made to the Government.

Pursuant to the recommendations of the Royal Commission on Coal (1946), the Board has continued to work for a reduction of customs duties and sales tax on coal mining machinery. It has also maintained its efforts to create a uniform system of coal mine cost accounting which would provide an accurate presentation of the cost of production.

The Dominion Coal Board consists of seven members including the Chairman who is its Chief Executive Officer and has the status of a deputy minister. The Board is responsible to, and subject to the direction of, the Minister of Mines and Technical Surveys.

Subsection 2.—Provincial Government Aid*

Newfoundland.—The Newfoundland Government, through its Mines Branch, provides several valuable services to those interested in prospecting and mining. It supplies certain geological maps of specific areas to interested parties. It identifies specimens sent in from Newfoundland and Labrador and assays by chemical means those that appear to have some mineral content. If good specimens from a known area warrant further investigation, a geologist from the Department of Mines and Resources is available to visit the locality and give advice. Prospecting and mining permits are issued by the Department and claims are registered.

Nova Scotia.—Under the provisions of the Mines Act (RSNS 1954, c. 179), the Government of Nova Scotia may assist a mining company or operator in the sinking of shafts, slopes, deeps and winzes and the driving of adits, tunnels, crosscuts, raises and levels. This assistance may take the form of work performed under contract, the payment of bills for materials and labour, or the guarantee of bank loans. Any such work must be approved by the Department of Mines. The Government is also authorized to assist the mining industry to procure power on the most economical basis and may guarantee the Nova Scotia Power Commission against any loss of revenue incurred on account of capital investments made for that purpose. Mining machinery and equipment that may be used in searching for or testing and mining minerals may be made available through the Government. Such equipment is under the direct supervision of the Chief Mining Engineer.

---

* Compiled from material supplied by the respective provincial governments.

The Government of Nova Scotia is also empowered to make any regulations considered necessary for increasing the output of coal. Such regulations cover the appropriation, on payment, of unworked coal lands, the operation of coal mines, and loans or guarantees for loans. Close co-operation is maintained with the Federal Government in carrying out federal regulations made to secure increased production and economical distribution of coal from the mines of the province.

New Brunswick.—There are five divisions under the Mines Branch of the Department of Lands and Mines. The *Mineral Lands Division* administers the disposition of Crown mineral rights including the issuing of prospecting licences, recording of mining claims, issuing of mining licences and leases and other matters pertaining thereto. Detailed and index claim maps are prepared for distribution. The *Mine Inspection and Engineering Division* administers the safety regulations governing operations under the Mining Act. Regular inspections of all mines are performed. Laboratory facilities are maintained. It is the responsibility of this Division to approve equipment used in mines. The *Geological Division* carries on general and detailed geological mapping and investigation. Maps and reports are prepared for distribution. Mineral and rock specimens are examined for prospectors. Preliminary examinations of mineral prospects are performed where requested and circumstances warrant. The *Mine Assessment Division* is responsible for the collection of mining taxes and royalties and the preparation of statistics on mineral production. The *Bathurst Division* serves as recording office for northeastern New Brunswick. In addition, claim maps as well as topographical, geological and aeromagnetic maps are available for perusal and distribution. The staff is prepared to provide information concerning the Mining Act and the use of various types of maps.

Quebec.—The Mining Act (RSQ 1941, c. 196) authorizes the Quebec Department of Mines to build, maintain and improve roads needed for mining development. Such work is done by contract under the supervision of departmental engineers. The Act gives the Department considerable latitude in this respect. Certain major roads have been built to new mining districts and completely paid for; on the other hand, if a particular property requires a branch road from an established highway the owner may be required to contribute a portion of the cost. To prevent the development of uncontrolled settlements in the vicinity of operating mines the Department regulates the use of land and permits the establishment of well organized communities. The municipal organization of such communities is administered by the Department of Municipal Affairs.

The Department maintains well equipped laboratories for the benefit of prospectors, geologists, engineers and mine operators. The facilities include equipment for mineralogy, petrography, ore dressing, and analysis by wet or dry assay, spectrography or X-ray. Qualitative and mineralogical determinations are made free of charge but quantitative analyses are charged for according to a tariff schedule. The Mining Act provides free coupons to be used by prospectors in paying for such analyses.

The province has authorized the establishment of research laboratories and a pilot plant to assist mining and metallurgical enterprises in the processes and techniques of extracting, transforming and utilizing ores.

The Department undertakes geological mapping and inspection. The work is divided between two branches, one responsible for reconnaissance (areal) mapping, and the other for detailed mapping in mining districts and inspection of individual deposits or properties. Field parties are headed by geologists or mining engineers. The published reports on these investigations are distributed free upon request. During the field season about 55 parties are maintained in different sections of the province. Offices, in charge of resident geologists, are maintained in mining districts to collect, preserve and compile geological information disclosed by mining explorations and individual sheets of the compilations are made available to the public.

The Department employs inspectors whose duties are concerned almost exclusively with the safety of workmen in operating mines. Three Mobile Mine Rescue Stations are operated and a mine rescue training program is conducted throughout the province.

In the field of education for prospectors, five-week courses are organized each year at Laval and Montreal Universities. University scholarships are granted each year to deserving undergraduate and postgraduate students in mining, geology and metallurgy, thus contributing to the training of qualified engineers for the benefit of the mining industry. Lectures are given to prospectors at different localities throughout the province.

Ontario.—The Ontario Department of Mines renders a multiplicity of services of direct assistance to the mining industry within the province, as briefly outlined below.

Mining Lands Branch.—This Branch handles all matters dealing with the recording of mining claims, assessment work, etc., and the final issuance of title to mining lands. As a service to the mining public, individual township maps are prepared and kept up to date showing lands open for staking and recorded and patented claims therein. District Mining Recorders maintain offices at strategic locations throughout the province.

Geological Branch.—A continuing program of geological mapping and investigation is carried out by the geological staff of the Department. Detailed reports and geological maps of the areas studied are made available to the public. In many of the active areas of the province resident geologists are engaged to gather and make available to the public information concerning geological conditions, exploration and development within their respective districts. One geologist specializing in industrial minerals is maintained on the staff to examine deposits of this type, to investigate methods of treatment and recovery of such minerals and to compile data on the uses, specifications and markets for such products. Collection and dissemination of information on groundwater resources is also a function of the Geological Branch. During the winter months, courses of instruction for prospectors are held in various centres throughout the province.

Laboratories Branch.—The Provincial Assay Office at Toronto carries out wet analyses and assays of metal and rock constituents on a custom fee basis and gives the same service free of charge to holders of valid assay coupons issued for the performance of assessment work on mining claims. The Timiskaming Testing Laboratories situated at Cobalt, in addition to performing fire assays and chemical analyses, operate a bulk sampling plant mainly to assist the producers of the area in the marketing of the cobalt-silver ores. A Cable Testing Laboratory, wherein all hoisting ropes in use at the mines are periodically tested, is operated under the supervision of the Inspection Branch.

Inspection Branch.—The main function of this Branch is the regular examination of all operating mines, quarries, sand and gravel pits and certain metallurgical works with a view to ensuring proper conditions of health and safety to the men employed. District offices to serve the local areas are maintained in the major mining centres of the province. Mine rescue stations in the principal mining sections are operated under the supervision of the Branch.

Exhibitions.—The Department each year presents displays pertaining to mining within the province at such exhibitions as the Canadian National at Toronto and at other centres from time to time.

Publications Branch.—All maps and reports of the Department are distributed through the agency of the Publications Branch located at the main office of the Department.

Library.—A mining library for the use of the Department and the public is maintained within the Department. This library stocks mainly publications and maps issued by the federal and provincial governments of Canada as well as numerous periodicals and bulletins published in the United States.

Mining and Access Roads.—In 1951 the Department of Mines undertook a program of road construction in the mineralized areas of the province, to open them for prospecting and development and to facilitate the actual operation of mining enterprises. When the importance of this program in its relation to the whole development of northern Ontario became apparent, the Government decided that its scope should be widened and, with that end in view, an interdepartmental committee was set up early in 1955 to decide on matters of policy and to determine the locations and priorities of the proposed roads. The Minister of Mines sits on this committee with the Ministers of Lands and Forests, of Treasury, of Highways and of Reform Institutions.

The Department of Highways supervises the construction of all access roads. Certain roads may be subsidized while others may be financed solely by Department of Mines funds. The sum of $1,500,000 a year has been made available for such projects.

Manitoba.—The Mines Branch of the Manitoba Department of Mines and Natural Resources offers five main services of assistance to the mining industry: maintenance, by the Mining Recorder's offices at Winnipeg and The Pas, of all records essential to the granting and retention of titles to every mineral location in Manitoba; compilation, by the geological staff of the Branch, of historical and current information pertinent to mineral occurrences of interest and expansion of this information by a continuing program of geological mapping; enforcement of mine safety regulations and, by collaboration with industry, introduction of new practices such as those concerned with mine ventilation and the training of mine rescue crews which contribute to the health and welfare of mine workers; and maintenance of a chemical and assay laboratory to assist the prospector and the professional man in the classification of rocks and minerals and the evaluation of mineral occurrences.

Manitoba also aids the mining industry by the construction of access roads to mining districts.

Saskatchewan.—Assistance to the mining industry in Saskatchewan is administered by the Mines Branch, Department of Mineral Resources, with its head office at Regina. The Branch is headed by a Director and comprises three divisions.

The Geology Division is directed by the Chief Geologist and maintains resident geologists in or near the principal mining areas. The Division conducts a prospectors' school which gives basic training in geology, mineralogy, prospecting and exploration techniques and administers the Prospectors' Assistance Plan which assists by lending equipment, paying certain transportation costs, paying for a grub-stake, and by providing technical advice. During the summer months, geological crews survey and map areas and prepare reports which are made available to the public. In 1957 and 1958 magnetometer and electro-magnetic surveys were conducted on approximately 3,000 sq. miles of the Precambrian area.

The Engineering Division administers the Mines Regulation Act, the purpose of which is to ensure safe working conditions in mines. Inspections of mines are carried out by Division officers, a Chief Engineer of Mines stationed at Regina, and an Inspector of Mines stationed at Uranium City. Safety education is also part of the Division's work, taking the form of first aid instruction, mine rescue training, and analysis of accidents.

The Mining Lands Division is responsible for making disposition of all Crown minerals with the exception of petroleum and natural gas, and maintains records respecting areas let out by lease, permit or claim. Recording offices, having the responsibility of assisting the public in determining the lands available and accepting applications, are located at Regina, Prince Albert, La Ronge, Uranium City and Flin Flon.

Alberta.—Alberta Government assistance to the mining industry is diversified in character. The Mines Division of the Department of Mines and Minerals regulates coal mines and quarries and maintains standards of safety by inspection and certification of workers. The Workmen's Compensation Board also maintains safety standards and trains mine rescue crews. The oil and gas industries are served in a similar way by the Oil and Gas Conservation Board. Its regulatory measures, however, are also concerned with preventing the waste of oil and gas resources and with giving each owner of oil and gas rights the opportunity of obtaining a fair share of production. This Board compiles periodic reports and annual records which are of invaluable assistance in oil development in Alberta. The mining industry is also served by the Research Council of Alberta which has made geological surveys of most of the province and has carried forward projects concerned with the uses and development of minerals. The Council has studied the occurrence, uses and analyses of Alberta coals and their particular chemical and physical properties, the use of coals in the generation of power, and the upgrading and cleaning of coal and has also studied briquetting, blending, abrasion loss, shatter and crushing strength, asphalt binders and dust-proofing of coal. Studies have been made of glass sands, salt, fertilizers, cement manufacture and brick and tile manufacture.

The province from time to time has had commissions examine various aspects of the mining industry when it has considered that their findings would be of assistance in developing such industries. The province, together with the Canadian Association of Oil Well Drilling Contractors and the Western Canada Petroleum Association, maintains a detailed supervisory and safety training program concerned with the drilling of oil and gas wells. Of assistance also to mining companies and oil companies are the special deductions provided for in the Alberta Corporation Income Tax Act. These follow the parallel provisions in the federal Income Tax Act.

British Columbia.—The Department of Mines of British Columbia provides the following services: detailed geological mapping as a supplement to the work of the Geological Survey of Canada; free assaying and analytical work for prospectors registered with the Department; assistance to the prospector in the field by departmental engineers and geologists; grub-stakes, limited to a maximum of $700, for prospectors; assistance in the construction of mining roads and trails; and inspection of mines to ensure safe operating conditions.

Section 3.—Mining Legislation

Federal Mining Laws and Regulations.—The Federal Government administers mining laws in the Yukon and Northwest Territories as well as those for Indian reservations. Mining Acts and Regulations applicable to the two Territories are administered by the Resources Division of the Northern Administration Branch, Department of Northern Affairs and National Resources. Minerals underlying federal land under grant are reserved to the Crown, and mining rights may be acquired by staking mineral claims under the appropriate Act or Regulations. Twenty-one-year leases of claims may be issued and these leases are renewable. The disposal of mineral rights underlying an Indian reservation is subject to the consent of the Indians occupying the reserve and to treaties relating thereto.

During 1960, changes in the Northwest Territories Quartz Mining Regulations opened up new areas to development and guaranteed Canadians an effective opportunity to benefit financially in such developments. Formerly, these Regulations applied only to the Northwest Territories; the revised legislation, known as the Canada Mining Regulations, includes provisions for the exploration and development of lands underlying the territorial waters of Canada lying outside any of the provinces and the Yukon Territory. The revision to the Regulations did not modify or change any detail, but two important new clauses concerning Canadian participation in financing and ownership were added to the licence stage: (1) no miner's licence will be granted to an individual unless the Minister of Northern Affairs and National Resources is satisfied that the applicant is a Canadian citizen and will be the beneficial owner of any interest acquired under such licence; (2) under the Regulations, companies are required to incorporate in Canada and to make their shares available to Canadians by listing on a recognized stock exchange, or show that Canadian citizens are the beneficial owners of at least half the issued equity stock in order to qualify for a miner's licence.

At the end of 1960, major revisions to these Regulations were under consideration and several meetings had been held with members of industry to discuss the proposed changes.

Provincial Mining Laws and Regulations.*—All Crown mineral lands lying within the boundaries of the several provinces (with the exception of those within Indian reserves and National Parks which are under the jurisdiction of the Federal Government) are administered by the respective provincial governments.

The granting of land in any province except Ontario and Nova Scotia no longer carries with it mining rights upon or under such land. In Ontario mineral rights are expressly reserved if they are not to be included. In Nova Scotia all minerals belong to the Crown except limestone, gypsum and building materials and, in granting land from the Crown, the right to these minerals goes with the title. In Newfoundland mineral and quarry rights are expressly reserved. Some early grants in British Columbia, Alberta, Saskatchewan, Manitoba, New Brunswick, Quebec and Newfoundland also included certain mineral rights. Otherwise, mining rights must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (or veined minerals and bedded minerals), fuels (coal, petroleum and gas) and quarrying. Provincial mining regulations under these divisions are summarized in the following paragraphs.

Placer.—In most provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held, and the royalties to be paid.

General Minerals.—These minerals are sometimes described as quartz, lode, or minerals in place. With the exception of British Columbia the most elaborate laws and regulations apply in this division. In all provinces except Alberta a prospector's or miner's licence, valid for one year, must be obtained to search for mineral deposits, the licence being general in some areas but limited in others. A claim of promising ground of a specified size may then be staked. This claim must be recorded within a time limit and payment of recording fees made, except in Quebec where no fees are required. Work to a specified value per annum must be performed upon the claim for a period of up to ten years. There is no time limit in British Columbia but $500 assessment work, of which a survey may represent two-fifths, must be performed and recorded before a lease may be obtained. In Quebec a specified number of man-days of work must be performed and the excess may be carried forward for renewals of licence; before mining can be commenced, a mining concession must be purchased for which it is necessary to produce an engineer's report indicating the presence of an orebody. The taxation applied most frequently is a percentage of net profits of producing mines or royalties. In Newfoundland the provincial mining tax was modified after Confederation on Mar. 31, 1949 to conform with the provincial obligations under the Dominion-Provincial Tax Agreement. No other form of taxation or royalty exists.

Fuels.—In provinces where coal occurs the size of holdings is laid down, together with the conditions of work and rental under which they may be held. In Quebec, ordinary mining claims give rights to all mineral substances and to their development, and stakings for combustible natural gas, salt, coal, mineral oil or naphtha, or iron sands may cover 1,280 acres per claim. Provision is sometimes made for royalties. Acts or regulations govern methods of production. In the search for petroleum and natural gas an exploration permit or reservation is usually required. However, in Manitoba, Saskatchewan, Alberta and British Columbia leases usually follow the exploration reservation whether or not any discovery of oil or gas is made. In Manitoba, Saskatchewan and Alberta, exploration costs are applicable in part on the first year's lease rental. In other provinces, the discovery of oil or gas is usually prerequisite to obtaining a lease or grant of a limited area, subject to carrying out drilling obligations and paying a rental, a fee, or a royalty on production.

---

* Compiled from material supplied by the provincial governments.

Quarrying.—Regulations under this heading define the size of holdings and the terms of lease or grant. On Quebec private lands the quarry belongs to the owner; on Crown lands mineral rights belong to the Crown and may be obtained in accordance with the provisions of the law although the rights to exploit peat or marl must be obtained by special licence. In Saskatchewan, sand and gravel belong to the owner of the surface of the land.

Copies of mining legislation including regulations and other details may be obtained from the provincial authorities concerned.

Section 4.—Statistics of Mineral Production

Subsection 1.—Value and Volume of Mineral Production

Statistics of the annual value of mineral production are available from 1886, total production being shown for five-year intervals from that date to 1945 and annually for subsequent years in Table 1. These figures are not strictly comparable throughout the period because of minor changes in methods of computing metallic content of ores sold and valuations of products but they do serve to show broad trends in the mineral industry.

The increase in the value of mineral production since the end of World War II has been phenomenal, having more than tripled since 1948. Production per head of the population advanced from $63.97 in that year to $139.01 in 1960. Although part of this increase was accounted for by advanced prices, the index of the volume of output from Canadian mines recorded an advance from 90.0 (1949 = 100) to 253.3 in the same comparison.

1.—Value of Mineral Production, 1886-1960

Year	Total Value	Value per Capita	Year	Total Value	Value per Capita	Year	Total Value	Value per Capita
	$	$		$	$		$	$
1886	10,221,255	2.23	1935[1]	312,344,457	28.80	1952	1,285,342,353	89.07

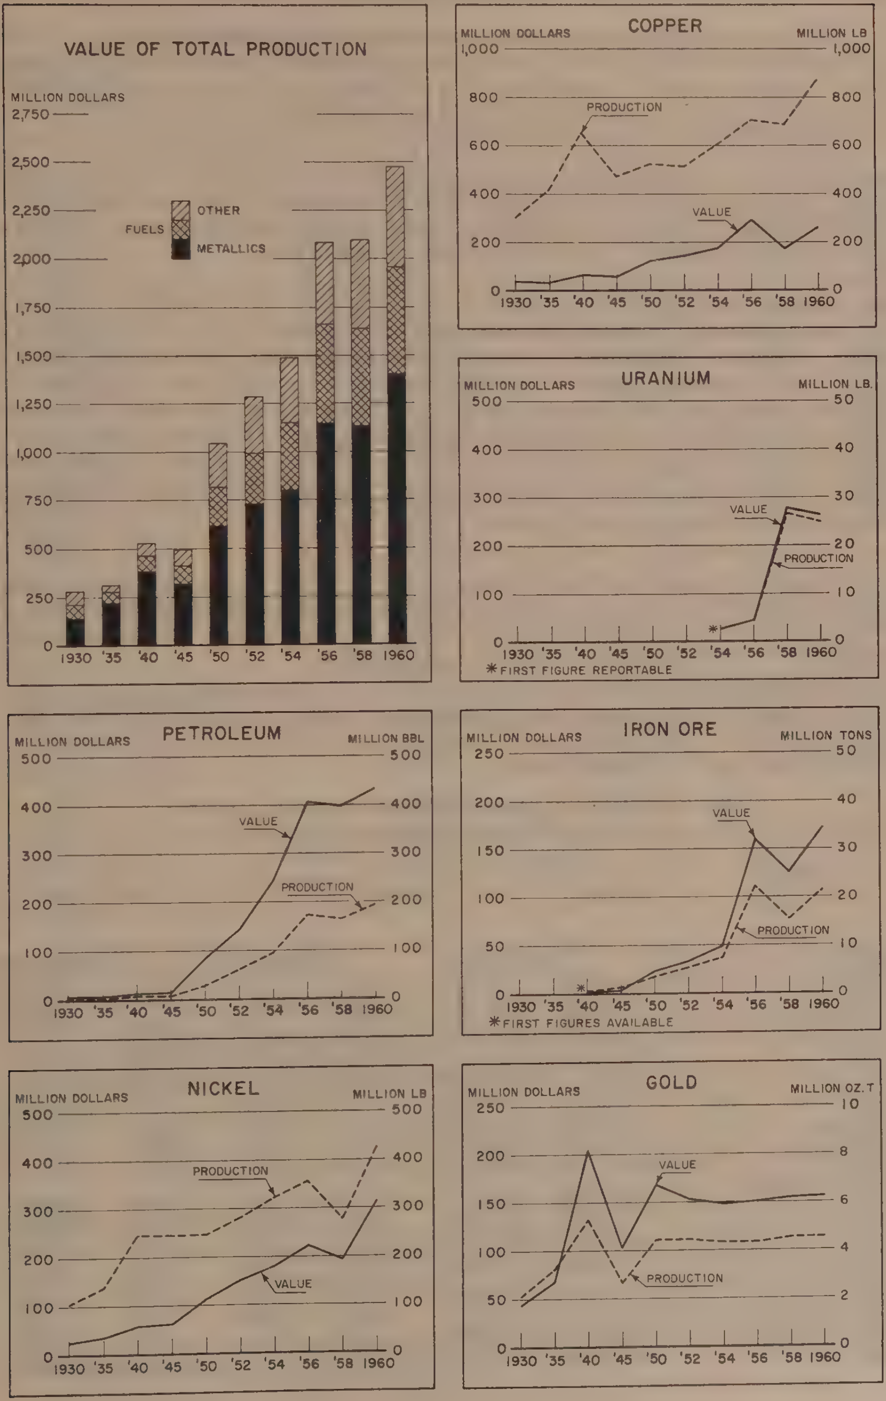
1930	279,873,578	27.42						

[1] Beginning with 1935, exchange equalization on gold production is included. [2] Value of Newfoundland production included from 1949.

Current Production.—A detailed review of mineral production during 1959 and 1960 is given at pp. 501-513. As stated there, the value of mineral commodities produced reached a new high in 1960 when it amounted to over $2,476,000,000. This was an increase of 2.8 p.c. over the value of $2,409,000,000 recorded in 1959, the previous peak. The greatest gains over 1959 were: nickel, $55,000,000; copper, $31,000,000; zinc, $11,000,000; asbestos, $11,000,000; and crude petroleum, $10,000,000. Substantial decreases were reported by uranium, $68,000,000, and iron ore, $21,000,000.

QUANTITY AND VALUE OF LEADING MINERALS PRODUCED IN 1960



The value of all metals produced amounted to $1,404,000,000 compared with $1,371,000,000 in 1959. Nickel, with a value of $313,000,000, again became the leading metal, replacing uranium which dropped to third place with a value of $263,000,000. Copper was second with a production valued at $264,000,000 and iron ore fourth with a value of $172,000,000. Iron ore shipments were down by 3,000,000 tons as a result of the below-capacity operation of the steel industry in the United States. The value of the gold output was $156,000,000, almost $6,000,000 higher than in 1959 and the value of the platinum metals, which are by-products of the nickel-copper ores, moved up to $28,000,000 from $17,000,000. An improved market for zinc resulted in higher production with a value of $108,000,000 compared with $97,000,000 in 1959.

The non-metallic group of minerals as a whole continued to increase in value to reach $195,000,000 in 1960, which was more than double the value of these commodities ten years previously. As compared with 1959, the individual products showed varied trends. The major contribution to the advance of $17,000,000 was made by asbestos which, with shipments valued at $119,000,000, reached a new high. The value of titanium dioxide, etc., rose from $8,500,000 to $14,300,000 and the value of elemental sulphur made from sour natural gas from $2,600,000 to $4,700,000. Salt shipments were not greatly changed from the high point of 1959. The export market for barite and gypsum declined, resulting in reduced production of these commodities, although gypsum output had a somewhat higher value. Shipments of lithia were made from stockpiled concentrates and production was low during 1960. Potash production ceased during the year while the mine shaft was being reconstructed.

Mineral or fossil fuels produced during 1960 were valued at $562,000,000 compared with $536,000,000 in 1959. Natural gas and crude petroleum continued their upward trends, output of the latter reflecting the improved export market. Coal output also showed some improvement after declining for several years.

There was less demand for structural materials by the construction industry. Shipments of brick, tile, etc., were down by $2,000,000 during 1960 and cement and lime were each down by $4,000,000. On the other hand, sand and gravel, which was largely used for roads, showed an upward trend.

Analysis of Current Value and Volume.—To assist in clearer and simpler interpretation of the trends in mineral production in Canada over the ten years 1951-60, the percentage of the total value contributed by each principal mineral in each year is given in Table **3**. Values upon which percentages in this table are based are the annual values of mineral production, expressed in Canadian currency, as shown in Tables **1** and **2**.

3.—Percentage of the Total Value Contributed by Principal Minerals, 1951-60

[1] Includes minor items not specified.

On the basis of 1949 production levels equalling 100, the total volume of mineral output* had increased by 1960 to 253.3, reflecting substantial advances in the output of natural gas, crude petroleum, iron ore and uranium, with lesser advances in copper, nickel, gold and asbestos. Coal was the only major mineral to register an over-all decline since 1949.

Subsection 2.—Provincial Distribution of Mineral Production

The 1960 increase in mineral production was general across the country except in Quebec (which was down very slightly as a result of lower production of iron ore, lead, titanium ore and some structural materials) and the Territories. Prince Edward Island's mineral production, which consists entirely of sand and gravel and stone, was also somewhat lower in 1960.

---

* For a description of this index, as well as one for manufacturing and electric power and gas utilities, see DBS Reference Paper *Revised Index of Industrial Production, 1935-1957 (1949=100)* (Catalogue No. 61-502).

Ontario again led the provinces in mineral output, producing 39.7 p.c. of the total in 1960 as compared with 40.3 p.c. in 1959 and 37.6 p.c. in 1958. The value rate of increase within the province was 1.4 p.c. in 1960 compared with 22.9 p.c. in the previous year. Higher production of nickel, copper, magnesium, gold and the platinum metals more than offset the major decrease in uranium. Quebec remained in second place, its contribution accounting for 17.8 p.c. of the Canadian total output compared with 18.3 p.c. in 1959 and 17.4 p.c. in 1958. Alberta followed in third place with 15.8 p.c. of the total, a percentage almost unchanged from 1959 and slightly lower than the 16.5 p.c. of 1958. The increase in value of output in the province amounted to 4.1 p.c. contributed mainly by natural gas, crude petroleum and a substantial increase in the production of elemental sulphur. Saskatchewan continued in fourth place, although its contribution to the total declined from 10.0 p.c. in 1958 to 8.7 p.c. in 1959 and 8.6 p.c. in 1960. Value of production for the province was 1.6 p.c. higher than in 1959; increases in crude petroleum and structural materials more than offset a lower uranium output. British Columbia's share of the total at 7.4 p.c. was slightly higher than in 1959, the value of the provincial output increasing by 14.7 p.c. Most of the metals produced in the province recorded higher values but particularly noteworthy increases were made by copper and nickel.

Newfoundland contributed 3.4 p.c. of the total mineral value in 1960, slightly more than in 1959. The provincial total was up by 16.9 p.c., contributed mainly by increased output of iron ore, lead and zinc. Nova Scotia increased its output of coal, gypsum and salt, thus raising its total mineral value by 3.5 p.c. The contribution of that province to the Canadian total was 2.6 p.c. Manitoba, which contributed 2.3 p.c. of the Canadian total, showed a moderate increase over 1959, accounted for mainly by a greater output of zinc. Increased production of structural materials brought New Brunswick's total up by 5.0 p.c.; no metals were produced in that province in 1960. Mineral production in the Territories was slightly lower than in 1959 and their combined contribution to the Canadian total decreased from 1.6 p.c. to 1.4 p.c.

5.—Value of Mineral Production, by Province, 1951-60

---

[1] All produced in Yukon Territory. [2] All produced in the Northwest Territories. [3] Yukon production 66,960 oz. t. valued at $2,247,847; remainder N.W.T. [4] Yukon production 7,054,632 oz. t. valued at $6,192,556; remainder N.W.T. [5] Includes 2 tons of garnet valued at $180 produced in Ontario. [6] Includes pyrophyllite. [7] Includes liquid hydrocarbons valued at $5,852,422.

Subsection 3.—Production of Metallic Minerals

The metallic minerals of greatest dollar value in Canada during 1960 were, in order: nickel, copper, uranium, iron ore, gold, zinc, lead and silver. With the exception of uranium, which dropped from first place to third, this order remained unchanged from 1959 and each of these metals except uranium and iron ore advanced considerably in value of production. Developments taking place in metal mining during 1959 and 1960 are described in detail in Section 1, pp. 501–513. The following statistical information gives a comparison of quantity and value figures for each of the principal metals over the ten-year period 1951-60.

Nickel.—The output of nickel reached an all-time high in 1960, in both quantity and value. A steadily upward trend in production experienced since the end of the War was interrupted in 1958 when a rise in world stocks brought about a decrease in nickel prices. However, 1959 output was again close to the level of 1957 and the increases in 1960 amounted to 14.5 p.c. in quantity and 21.7 p.c. in value.

About 93 p.c. of the 1960 quantity shown in Table 7 came from the Sudbury area of Ontario, about 4 p.c. from Lynn Lake in Manitoba and the remainder about equally from Rankin Inlet on Hudson Bay in the Northwest Territories and from Hope, B.C.

Canada uses only about 5,000 tons of refined nickel annually. Exports amounted to 108,350 tons in 1960, mostly to the United States, and exports of nickel in matte, etc., amounted to 87,670 tons.

7.—Quantity and Value of Nickel Produced, 1951-60

Note.—Figures from 1889 are given in the corresponding table of previous Year Books beginning with the 1929 edition.

Year	Quantity	Value	Year	Quantity	Value
	tons	$		tons	$
1951	137,903	151,269,994	1956	178,515	222,204,860
1952	140,559	151,349,438	1957	187,958	258,977,309
1953	143,643	160,430,098	1958	139,559	194,142,019
1954	166,299	180,173,392	1959	186,555	257,008,801
1955	174,928	215,866,007	1960p	213,641	312,738,234

Copper.—Although the quantity of copper produced in Canada reached its peak in 1960, the total value for that year was somewhat lower than that of the smaller quantity produced in 1956. The 10.9-p.c. increase in total tonnage produced in 1960 over 1959 was contributed by Quebec, Ontario and British Columbia.

8.—Copper Production, by Province, and Total Value 1951-60

Note.—Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

Year	New-foundland	Quebec	Ontario	Manitoba	Saskat-chewan	British Columbia	Canada	
							Quantity	Value

[1] Includes one ton valued at $536 produced in N.W.T. [2] Includes 383 tons valued at $218,663 produced in Nova Scotia and three tons valued at $1,969 produced in N.W.T. [3] Includes 788 tons valued at $471,962 produced in Nova Scotia. [4] Includes 991 tons valued at $577,868 produced in Nova Scotia. [5] Includes 1,028 tons valued at $757,758 produced in Nova Scotia and 35 tons valued at $26,290 produced in New Brunswick. [6] Includes 404 tons valued at $334,704 produced in Nova Scotia and 6 tons valued at $5,272 produced in New Brunswick. [7] Includes 5,738 tons valued at $3,322,400 produced in New Brunswick and 165 tons valued at $95,672 produced in N.W.T. [8] Includes 328 tons valued at $166,683 produced in New Brunswick and 434 tons valued at $220,748 produced in N.W.T. [9] Includes 494 tons valued at $292,157 produced in N.W.T. [10] Includes 625 tons valued at $378,625 produced in N.W.T.

Uranium.—Uranium mineralization has been found in Canada at intervals along the western and southern edges of the Canadian Shield but production has been concentrated in four areas within this belt—Great Bear Lake in the Northwest Territories, Beaverlodge in northern Saskatchewan, and Elliot Lake and Bancroft in Ontario. Although output of uranium first began in the Northwest Territories in 1942, figures were not available until 1954 because of government restrictions. However, it was after that time that the large mines and mills of Saskatchewan and Ontario came into production. Peak output amounting to 31,800,000 lb. was reached in 1959 from 20 mills, but during 1960, for economic reasons (see p. 506), 10 mills ceased operations and production dropped to 25,000,000 lb. Of the 1960 quantity, 78.9 p.c. was produced in Ontario, 18.4 p.c. in Saskatchewan and the remainder in the Northwest Territories.

9.—Production and Value of Uranium (U_3O_8), by Province, 1954-60

Year	Ontario		Saskatchewan		Northwest Territories		Canada	
	Quantity[1]	Value	Quantity[1]	Value	Quantity[1]	Value	Quantity[1]	Value

[1] Figures for 1956 include radium salts, silver, cobalt and uranium oxides; figures for 1957-60 are for uranium oxide (U_3O_8).

Iron Ore.—Shipments of iron ore from Canadian mines, after a considerable setback in 1958, reached record levels in 1959 and then dropped back in 1960 by 12.2 p.c. in quantity and 10.9 p.c. in value. Increases reported by Newfoundland and British Columbia were more than offset by lower shipments in the two central provinces, particularly Quebec where output was down by 35.3 p.c.

Production of pig iron was at its highest level in 1960 but steel ingots and castings dropped slightly from the high point of 1959. Exports of iron, in the form of ore and concentrates, in 1960 amounted to 18,559,400 tons valued at $151,678,119, compared with 20,778,800 tons valued at $157,814,000 in 1959. Of the 1960 tonnage exported, 61 p.c. went to the United States and most of the remainder to Europe, mainly the United Kingdom. Japan received 1,165,430 tons

[1] Includes 5,400 tons of iron ore valued at $16,200 produced in Alberta.

Gold.—Over the ten-year period 1951-60, Canada's annual gold production has fluctuated narrowly between 4,000,000 oz.t. and 4,600,000 oz.t., and its value between $140,000,000 and $162,000,000. Estimates for 1960 show the highest quantity produced since 1942 and an increase of 2.7 p.c. in quantity and 3.8 p.c. in value over 1959. All producing provinces recorded higher production during the year but Ontario, Quebec and British Columbia accounted for 78.8 p.c. of the total increase. Ontario produced 59.2 p.c. of Canada's gold output in 1960, Quebec 22.4 p.c., the Northwest Territories 8.9 p.c. and British Columbia 4.4 p.c. Canada produced 11 p.c. of the world's output in 1960 and ranked as the second largest producer, following the Union of South Africa.

11.—Quantity and Value of Gold Produced, by Province, 1951-60

NOTE.—Values are calculated at world prices in Canadian funds. Figures from 1862 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

---

[1] Includes 240 oz.t. of gold valued at $8,052 produced in New Brunswick. [2] Includes 52 oz.t. of gold valued at $1,767 produced in New Brunswick.

Zinc.—The estimated production of zinc (including refined zinc, zinc ores and concentrates) in 1960 showed considerable improvement over the low point of 1959, although it was still well below output for the years 1955-58. British Columbia accounts for half the Canadian production—50.1 p.c. in 1960. Quebec was second in that year with 12.2 p.c., followed in order by Saskatchewan, Ontario, Newfoundland, Manitoba and the Yukon Territory. However, the major contribution to the increased production in 1960 was made by Manitoba.

12.—Quantity and Value of Zinc Produced, 1951-60

NOTE.—Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1939 edition.

Year	Quantity[1]	Value	Average Price per lb.	Year	Quantity[1]	Value	Average Price per lb.
	tons	$	cts.		tons	$	cts.
1951	341,112	135,762,643	19.90	1956	422,642	125,437,344	14.84
1952	371,802	129,833,285	17.46	1957	413,740	100,042,533	12.09

[1] Estimated foreign smelter recoveries and refined zinc produced in Canada.

Lead.—Lead production in 1960 in the form of refined pig and recoverable lead in ore and concentrates was moderately higher than in 1959. Of the total production, British Columbia accounted for 151,886 tons, or 80.2 p.c. The only lead refinery in Canada is located in that province at Trail. Silver-lead ores are mined at Keno Hill in Yukon Territory and lead also occurs in the complex ores at Buchans in Newfoundland. Small amounts of lead concentrates are produced in Quebec and Ontario.

13.—Quantity and Value of Lead Produced from Canadian Ores, 1951-60

NOTE.—Figures from 1887 are given in the corresponding table of previous Year Books beginning with the 1929 edition.

Year	Quantity	Value	Year	Quantity	Value
	tons	$		tons	$
1951	158,231	58,229,146	1956	188,854	58,582,651
1952	168,842	54,671,021	1957	181,484	50,670,407
1953	193,706	50,076,822	1958	186,680	42,413,805
1954	218,495	58,250,831	1959	186,696	39,616,835
1955	202,762	58,314,500	1960P	189,267	40,427,281

Silver.—Silver production in 1960 reached the record amount of 32,328,143 oz.t. with a peak value of $28,726,788. Most of the increase over 1959 came from British Columbia although production was higher also in Quebec, Manitoba and the Northwest Territories. Production of this metal is fairly widespread across Canada, being recovered mainly as a by-product in the treatment of gold ores and ores of copper, lead, zinc, cobalt and nickel. A large part of Ontario's production of 9,737,480 oz.t. in 1960 originated in the silver-cobalt ores mined at Cobalt, and British Columbia produced 8,705,593 oz.t. from its silver-lead-zinc ores. Yukon Territory is the third largest producer, followed by Quebec. Canada's annual output of silver is exceeded only by that of Mexico and the United States.

14.—Quantity of Silver Produced, by Province, and Total Value, 1951-60

NOTE.—Figures from 1887 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

Year	Average Price per oz.t. (Canadian funds)	Newfoundland	Nova Scotia	Quebec	Ontario	Manitoba	Saskatchewan	British Columbia	Northwest Territories	Yukon Territory	Canada[1]

[1] Includes relatively small quantities produced in New Brunswick and Alberta; there was no silver produced in New Brunswick in 1959 and 1960.

Metals of the Platinum Group.—Production in 1960 was the second highest on record and 40.3 p.c. greater than in 1959. The whole production comes from the nickel-copper ores at Sudbury, Ont., and the metals are recovered in the form of residues in the electrolytic refinery tanks at Port Colborne, Ont., and at the refinery in Norway to which the Falconbridge Nickel Company Limited ships nickel-copper matte.

15.—Quantity and Value of Platinum and Palladium[1] Produced, 1951-60

NOTE.—Figures from 1921 are given in the corresponding table of previous Year Books beginning with the 1940 edition.

Year	Platinum		Palladium[1]	
	oz. t.	$	oz. t.	$

1959	150,382	11,015,449	177,713	5,916,989
1960p	221,832	18,134,766	238,489	9,538,921

[1] Includes also iridium, rhodium, ruthenium.

Subsection 4.—Production of Non-metallic Minerals (excluding Fuels)

Asbestos is by far the most important item in this group in point of value, followed by salt, gypsum and sulphur. These four items are discussed separately below; the quantity and value of other non-metallic minerals produced are shown in Table 2, p. 545. See also the review of developments in the industrial mineral field at pp. 522-524.

Asbestos.—In 1960, asbestos mines shipped a record 1,141,000 tons valued at $119,000,000, representing an increase of 8.6 p.c. in quantity and 10.5 p.c. in value over 1959. Quebec, with 12 producing mines, accounted for 94.5 p.c. of the Canadian tonnage; Ontario's one mine produced 22,706 tons and British Columbia's one mine produced 40,238 tons.

16.—Quantity and Value of Asbestos Produced, 1951-60

NOTE.—Figures from 1896 are given in the corresponding table of previous Year Books beginning with the 1911 edition.

Year	Quantity	Value	Year	Quantity	Value
	tons	$		tons	$
1951	973,198	81,584,345	1956	1,014,249	99,859,969
1952	929,339	89,254,913	1957	1,046,086	104,489,431
1953	911,226	86,052,895	1958	925,331	92,276,748
1954	924,116	86,409,212	1959	1,050,429	107,433,344
1955	1,063,802	96,191,317	1960p	1,140,538	118,700,998

Salt.—The output of salt in 1960 was slightly below the record amount of 3,289,976 tons produced in 1959, although the value was somewhat higher. The decline was more than accounted for by a 143,000-ton drop in Ontario's output; Ontario produces over 90 p.c. of the total tonnage. Rock salt is mined in Nova Scotia and Ontario only; brine wells are operated in Nova Scotia, Ontario, Manitoba, Saskatchewan and Alberta.

17.—Quantity of Salt Produced, by Province, and Total Value, 1951-60

NOTE.—Figures from 1926 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

Year	Nova Scotia	Ontario	Manitoba	Saskatchewan	Alberta	Canada

Gypsum.—Nova Scotia deposits provided more than 86 p.c. of the total output of gypsum in 1960. The decrease of 11.8 p.c. in the tonnage produced in that province compared with 1959, together with moderate decreases in all other producing provinces except British Columbia, brought the Canadian total down 12 p.c. from the record level of 5,878,630 tons in 1959. Prices, however, were higher and the value of the 1960 production was 10.9 p.c. above that for 1959. In Canada, gypsum is used in the manufacture of plaster and wallboard and is added to Portland cement to control setting, but the greater part of the output is exported in crude form to United States plants for processing.

18.—Quantity of Gypsum Produced, by Province, and Total Value, 1951-60

Sulphur.—Figures in Table **19** represent the quantity and value of sulphur contained in derivatives from smelter gases such as sulphur dioxide, sulphuric acid, etc., and in pyrite and pyrrhotite shipments, as well as the quantity of sulphur refined from natural gas production. In Canada, sulphur is used in the treatment of sulphite pulps and in the manufacture of rayon, explosives, rubber goods, petroleum refining, matches and insecticides.

---

[1] Recovered from sour natural gas and nickel sulphide ores. [2] Does not include sulphur in acid made from roasting zinc sulphide concentrates at Arvida. [3] Includes sulphur in acid made from roasting zinc sulphide concentrates at Arvida.

Subsection 5.—Production of Fuels

Coal.—The downward trend in the production of coal, in evidence for some time, was interrupted in 1960 when tonnage mined increased by 5.6 p.c. and value by 3.0 p.c. over 1959. All producing provinces with the exception of Alberta showed some increase in output. Imports continued to decline but exports, mostly of bituminous coal, recorded a considerable increase in 1960.

20.—Coal Production, by Province, 1951-60

[1] Includes anthracite dust. [2] Includes coal ex-warehoused for ships' stores. [3] Canada also imported 170,157 tons of briquettes of coal or coke valued at $2,061,798 in 1951; 155,597 tons valued at $1,868,619 in 1952; 128,673 tons valued at $1,601,376 in 1953; 128,163 tons valued at $1,583,610 in 1954; 124,216 tons valued at $1,536,347 in 1955; 126,724 tons valued at $1,581,699 in 1956; 73,306 tons valued at $937,679 in 1957; 41,820 tons valued at $536,344 in 1958; 24,521 tons valued at $321,149 in 1959; and 15,528 tons valued at $213,239 in 1960.

22.—Exports of Domestic Coal, 1951-60

NOTE.—Figures from 1868 are given in the corresponding table of previous Year Books beginning with the 1911 edition.

Year	Quantity	Value	Year	Quantity	Value
	tons	$		tons	$
1951	435,083	3,495,664	1956	594,166	4,710,030
1952	388,960	3,203,522	1957	396,311	3,357,959
1953	255,274	1,999,908	1958	338,544	2,907,513
1954	219,346	1,716,435	1959	473,768	3,582,313
1955	592,782	4,870,598	1960[p]	852,921	6,789,163

The amounts and percentages of domestic and imported coal apparently consumed in Canada in the years 1951-60 are shown in Table 23. The imports represent amounts taken out of bond for consumption during the respective years, regardless of when received. Thus the totals are exclusive of coal landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond. However, since such coal while remaining in bond at the port is available for Canadian consumption if required, the total amount of coal made available for consumption in Canada in 1960 amounted to 22,427,944 tons, including 1,199,809 tons of anthracite, 17,516,780 tons of bituminous, 1,540,566 tons of subbituminous, and 2,170,789 tons of lignite.

23.—Consumption of Canadian and Imported Coal in Canada, 1951-60

NOTE.—Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1921 edition.

Year	Canadian Coal[1]		Imported Coal 'Entered for Consumption'				Grand Total	Consumption per Capita[3]
			From United States	From United Kingdom	Total[2]

1960	9,973,308	42.9	13,211,493	65,375	13,276,599	57.1	23,249,907	13.1

[1] The sum of Canadian coal mines' sales, colliery consumption, coal supplied to employees and coal used in making coke, etc., less the tonnage of coal exported. [2] Includes small tonnages from countries other than the United Kingdom and the United States. Deductions have been made from this column to take account of foreign coal re-exported from Canada and bituminous coal ex-warehoused for ships' stores. [3] Figures based on estimates of population given at p. 165.

Petroleum.—The upward climb of crude petroleum production in evidence since the discovery of the Leduc field in Alberta in 1947 halted temporarily in 1958 but resumed in 1959 and continued in 1960. Production in the latter year reached a record level, 4.1 p.c. above the previous peak in 1959; the 1960 value, however, was still somewhat below that of the 1957 output. The increase in 1960 over 1959 was mainly accounted for by a more than 5,000,000-bbl. increase in Saskatchewan and a more than 2,000,000-bbl. increase in Alberta.

24.—Quantity and Value of Crude Petroleum Produced, by Province, 1951-60

[1] Includes 148,454 bbl. valued at $302,375 produced in British Columbia. [2] Includes 340,945 bbl. valued at $763,717 produced in British Columbia. [3] Includes 512,359 bbl. valued at $1,022,156 produced in British Columbia. [4] Includes 866,234 bbl. valued at $1,583,129 produced in British Columbia. [5] Includes 950,000 bbl. valued at $1,730,000 produced in British Columbia.

Natural Gas.—The output of natural gas continued to increase at a rapid rate in Alberta and British Columbia. Total Canadian shipments, which amounted to 150,772,000 Mcf. in 1955 reached a high of 504,452,000 Mcf. in 1960, 370,000,000 Mcf. of which came from Alberta. A review of developments in the natural gas industry is given at pp. 524-528.

25.—Quantities of Natural Gas Produced, by Province, and Total Value, 1951-60

NOTE.—Figures from 1920 are given in the corresponding table of previous Year Books beginning with the 1940 edition.

Year	New Brunswick	Ontario	Saskatchewan	Alberta	British Columbia	Northwest Territories	Canada	
	Mcf.	Mcf.	Mcf.	Mcf.	Mcf.	Mcf.	Mcf.	$
1951.....	261,579	8,442,842	860,082	69,876,831	—	19,333	79,460,667	7,158,920
1952.....	202,042	8,302,190	1,007,491	79,149,895	—	24,847	88,686,465	9,517,638
